Fermi returned to Chicago on January 2, 1946. While waiting for the synchrocyclotron to be finished, he again worked with neutrons at the Argonne Laboratory, using its reactor as a source. This period at Argonne marked the end of his investigations on neutrons which traced back to his initial work in Rome.

Fermi formed a new group of young pupils, many of them returning from Los Alamos. At Chicago he was active in all seminars and in many discussions. Often, with a single remark, he sowed the seeds of further discovery. For instance, Maria Mayer in reporting an experiment inspired by Fermi generously acknowledged his assistance.

Meanwhile the stage was readying for the last period of Fermi's research. Meson physics was opening and Fermi immediately recognized its importance. Since the new Chicago synchrocyclotron

promised a powerful artificial source of mesons, Fermi's experimental talents turned in this direction.

The new machine began operations in the spring of 1951, and he and his group soon were publishing new discoveries. He did his last experiment in 1953, and his paper on "Scattering of Negative Pions by Hydrogen" of that year concluded his experimental work. Thereafter, Fermi spent more and more time helping his students by discussion and frequently lending a hand in their experiments, but never again to the extent that would allow him to admit that the work was his own.

Thus freed from the demands of experimental work, he could consider the possibility of working together with the Indian scientist Chandrasekhar on problems of astrophysical interest related to his longstanding interest in cosmic rays. His new colleague was later to write of Fermi's intuitive insight into nuclear physics:

During all my discussions with Fermi, I never failed to marvel at the ease and clarity with which he analyzed novel situations in fields in which, one might have supposed, he was not familiar and, indeed, was often not familiar prior to the discussion. In the manner in which he reacted to a new problem, he always gave me the impression of a musician who, when presented with a new piece of music, at once plays it with a perception and a discernment which one would normally associate only with long practice and study.

Chandrasekhar also gives us this further insight into Fermi's magnificent feel for nuclear physics and the psychology of his inventive genius. Fermi had described to him how he came to make the discovery which Fermi thought was the most important one he had made, when he was working with neutrons in his early days in Italy. This is Fermi's account:

One day, as I came to the laboratory, it occurred to me that I should examine the effect of placing a piece of lead before the incident neutrons. And instead of my usual custom, I took great pains to have the piece of lead precisely machined. I was clearly dissatisfied with something: I tried every 'excuse' to postpone putting the piece of lead in its place. When finally, with some reluctance, I was going to put it in its place, I said to myself, 'No! I do not want this piece of lead here; what I want is a piece of paraffin.' It was just like that: with no advance warning, no conscious, prior, reasoning. I immediately took some odd piece of paraffin I could put my hands on and placed it where the piece of lead was to have been.

Mr. Speaker, these few but telling insights into Fermi's work, these evidences of his genius, when coupled with the lasting and vital significance of what he accomplished for this country constitute the necessary and sufficient reasons, as our mathematical friends would say, to dedicate the Weston machine to the memory of Enrico Fermi.

THE PURPOSE OF THE 200-BEV ACCELERATORS

Consider the purpose of the new accelerator and the questions that our scientists can put to nature with its energetic particles. Dr. Robert R. Wilson, director of the project, looks at the many particles discovered through use of less energetic particles. That nature thereby revealed is more complex than first expected, he reminds us, is a challenge rather than a disappointment. In building higher energy machines to study these complexities, all kinds of exciting and fundamental discoveries have been made. Not only have various new particles been observed, but also new physical laws have been discovered while old ones have been observed to be violated. In previous studies of the nucleus—where Fermi was a masterful leader—physicists were able to understand why the stars shine and how matter is made.

Dr. Wilson eloquently reminds us that pure science, the search for understanding, is as important for its effect on the minds of men as it is for eventual contributions to his standard of living:

Man's effort to achieve a better comprehension of the world in which he lives will continue to have a profound effect not only on his philosophy, not only on his well-being, but also on his whole social organization.

What are some of the questions that scientists can put to nature with the new machine when it is finished? These fortunate men will be in the same happy situation as was Fermi when the Chicago synchrocyclotron came on-line in 1951. Dr. Wilson lists some of these questions:

Which, if any, of the particles that have so far been discovered, is, in fact, elementary, and is there any validity in the concept of the elementary particles?

What new particles can be made at energies that have not yet been reached? Is there some set of building blocks that is still more fundamental than the neutron and the proton?

Do the laws of electromagnetic radiation, which are now known to hold over an enormous range of lengths and frequencies, continue to hold in the wave length domain characteristic of subnuclear particles?

These are some of the questions that scientists in nuclear physics would explore. There is good reason to believe that they can be clarified by experiments. Although these are questions that appear to be the "right" ones to investigate, the best questions have undoubtedly not yet been asked. Only further experiment with the Batavia machine will give us the insight to ask them. Nature in the past has always surprised us. It is probable, as our scientists take the step up to the 200-Bev machine, that more surprises await.

Enrico Fermi were he with us today would be chaffing impatiently to ask these questions of nature and to interpret her answer.

Enrico Fermi was a great experimentalist. He had a deep and intuitive insight into nature. Working with the Weston machine will demand the greatest insight and ability to see in the experimental returns new relations, new facts that can escape the comprehension of the less gifted. Above all, Fermi was a great teacher. The full return on the Nation's pending investment in the Weston accelerator will be realized only as its scientists can emulate. Fermi in his ability to teach, to simplify, to lay out for their students and associates the strange beauties of the worlds of the atoms.

Mr. Speaker, I have laid out my reasons why the new 200-Bev accelerator should be dedicated to Enrico Fermi and I hope that you and our fellow Members of Congress will give it your support.

TRIBUTE TO THE LEAGUE OF WOMEN VOTERS

HON. FRANK CHURCH

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Monday, March 24, 1969

Mr. CHURCH. Mr. President, the Washington Post Sunday supplement, Potomac, of March 16, 1969, contains an article entitled "The League of Women Voters—They've Come a Long Way," authored by Julius Duscha. It is well written and researched and commemorates one of our Nation's outstanding women's organizations.

The League of Women Voters has been in the forefront of social change in our country. Their careful study and consideration of vital political issues has repeatedly resulted in the passage and approval of vital legislation at all levels of our Government, from the city council to the Oval Room of the White House.

The league serves a unique function in the education of its membership. Its nonpartisan nature allows it to take positions unaffected by considerations of party loyalty or political advantage. Its services to the community, the States, and the Nation are outstandingly deserving of recognition and support.

I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE LEAGUE OF WOMEN VOTERS—THEY'VE COME A LONG, LONG WAY

(By Julius Duscha)

On a gray winter morning 15 women gathered in the comfortable family room of the Herman P. McNatt residence at 14620 Melinda Lane in Rockville to have coffee, exchange neighborhood gossip and talk about poverty in Montgomery County. Three of the women were knitting and another was turning worn-out collars on some shirts as Mrs. George McRory led a discussion complete with hand-drawn charts, on the county's poverty problems and the inadequate community efforts to help its 1600 poor families.

A male reporter felt like an interloper as he sat in the back of the room listening to Peg McRory, who is a great-great granddaughter of Julia Ward Howe, author of the "Battle Hymn of the Republic." When you are the only man in a family room full of women it is of course impossible to be inconspicuous. I was there because I had been told I could never understand the League until I had seen one of its unit meetings.

I became interested in the League of Women Voters when I learned earlier in the winter that the ladies were beginning a year-long celebration to mark the 50th anniversary of their organization and of the ratification of the constitutional amendment which gave women the right to vote. "Yes, we're celebrating for a whole year," Mrs. A. P. Guyol, national public relations director for the League, said rather defensively, "but the Girl Scouts spent three years celebrating their 50th anniversary."

For 50 years now women like those who gathered in Mrs. McNatt's family room out in Rockville the other day have been meeting in small groups and earnestly discussing such problems as poverty. Not only are League

members earnest; they are purposeful, tenacious and often frighteningly well-informed. And they can be effective. No less a political realist than Sargent Shriver wrote the national president of the League last spring when he was still directing the war on poverty to praise the League for its support of the antipoverty program and to say that the organization "surely helped to make the difference between passage and outright rejection or dismantling of a highly controversial and effective poverty program."

Men of course are always tempted to kid women's organizations. There is the clubwoman image of the Helen Hokinson cartoons in the *New Yorker* which showed the befuddled lady chairmen entangled in Robert's Rules of Order. And there is the further feeling among men that despite women's demands for equality the ladies are always prepared to fall back on appeals to motherhood or on their own feminine winks and wiles even to get poverty legislation through a stubborn Congress where the pervading atmosphere all too often is still that of a men's smoker.

But what about the League of Women Voters at the decidedly matronly if not grandmotherly age of 50? To find out I went not only to a League unit meeting to sample its participatory democracy; I also spent some time at its national headquarters on the fifth floor of the American Psychological Association Building up on 17th st. and Rhode Island ave. nw. as well as on Capitol Hill. There, among other things, I found the remnants of the rival Woman's Party and its proud leader Alice Paul, who organized the woman's suffrage march down Pennsylvania Avenue 56 years ago—broken up by the police on the eve of Woodrow Wilson's first Inaugural on March 4, 1913.

The League of Women Voters is the daughter of the National American Woman Suffrage Association which along with the Woman's Party and some other organizations carried on for more than 60 years their fight for women's suffrage. The battle ended in 1920 when the 19th amendment to the U.S. Constitution was ratified. The amendment was adopted by the Senate and the House just 50 years ago, in 1919. Early in 1920, before the suffrage amendment had been ratified by the necessary three-fourths of the states but when it was already obvious that the amendment would become part of the Constitution, the National American Suffrage Association held its victory convention in Chicago. It was followed by the first national Congress of the League of Women Voters.

Carrie Chapman Catt, last president of the National American Woman Suffrage Association and first president of the League of Women Voters, explained the League's purpose to the founding congress in these words: "We are going to be a semi-political organization. We want to do political things. We want legislation. We are going to educate for citizenship. Be a partisan, but be an honest and independent one. Important and compelling as is the power of the party, the power of principle is even greater. Those who have struggled in a 60 years old battle for political freedom should not voluntarily surrender to political slavery—and one kind of partisanship is little more than that. It is possible, even though unusual, to be a partisan and an independent.

"To sail between the Scylla of narrow-minded partisanship on the left and the Charybdis of ultra-conservation on the right," declared Mrs. Catt in her peroration, "is the appointed task of the League of Women Voters; through that narrow and uncomfortable passage it must sail to wreck upon the rocks or to glorious victory."

In the nearly half a century since Mrs. Catt spread out her vision of the League of Women Voters, the organization has been on some shoals and has had some glorious victories. The tiny, gray-haired and persevering Miss Paul still directs the Woman's Party from the early 19th century Alva Belmont House at 144 Constitution ave. ne. across from the U.S. Supreme Court building, continuing its 46-year-old campaign for an amendment to the Constitution guaranteeing women equal rights in all matters of law. But the League of Women Voters, now under the direction of the fortyish, stylish Mrs. Bruce B. Benson of Amherst, Mass., is involved in all matter of issues ranging from foreign trade to the poverty program. The League now takes a neutral stand on the equal rights amendment, which it opposed for 30 years on the ground that it would take away from women protective labor regulations and other laws designed to help them.

"I'm not a feminist really," said Mrs. Benson, a blonde, attractive woman of 41 who favors gold jewelry, as we talked about the League of her modest, vaguely academic and New England office on 17th Street.

"A feminist," she continued, "is really someone who thinks women are better than men. I find myself very irritated with people who treat me as a woman rather than as an individual. If that young thing wants to be a jockey, let her be a jockey, not because she's a woman but if she's able to do it." (Mrs. Benson was referring to Diane Crump, the 20-year-old woman who has had such a difficult time trying to establish herself as a jockey in the face of opposition from male jockeys and from the men who control horse racing.)

Lucy Benson is fairly typical of the 150,000 members of the League of Women Voters. She is the wife of a physics professor at Amherst College. She joined the League in 1950 when the wife of the chairman of her husband's department asked her to. That's the kind of an invitation you don't turn down. But however reluctant, Mrs. Benson may have been in the beginning she soon became a highly interested member. Like most other League members, Mrs. Benson is middle-middle to upper-middle class, well-educated (bachelor's and master's degrees in political science from Smith College and a master's thesis on the decline of the British Liberal party) and intensely concerned about the world around her.

Before becoming national president of the League last year, Mrs. Benson was head of the Massachusetts League. She led such a successful drive to end the excessive powers held by the Governor's Council that an infuriated legislator once referred to her group as the "League of Women Vultures." Commenting on Mrs. Benson's work as president of the Massachusetts League, a Boston newspaper noted: "She has dared to lead the League's 12,375 members far deeper into the thicket of politics than ever before. Today, as a result, the League of Women Voters of Massachusetts is unquestionably the most powerful political action group in the state."

In recalling her experiences in Massachusetts politics, Mrs. Benson said as she sat in her Washington office smoking a cigarette and occasionally sipping coffee from a paper cup: "Probably, most politicians do not attack the League because they are afraid it will boomerang on them as an attack on motherhood. Politicians have very mixed feelings about the League. Many wish the amount of energy we put into the League could be channeled into the political parties. Others want us to be barefoot, pregnant and in the kitchen."

Over the years the League has generally been allied with liberal causes. In the 1920's Mrs. Catt, an internationalist, got the League to sponsor a conference on ways to keep the peace and prevent war. The League has long advocated the removal of most restrictions on world trade. Domestically, the League in recent years has supported civil rights legislation and electoral college reform as well as the antipoverty program. But the League's program, which is supposed to percolate up from hundreds and even thousands of unit meetings to its biennial conventions (and does for the most part), has some curious blank spots. It has never taken a stand on the war in Vietnam and it has not become involved in the current surge of concern over consumer problems, an area that would seem to be made to order for a liberal-minded women's organization.

One reason the League often does not quickly become involved in controversial issues is its tradition of study, study and more study. Its units, for example, are supposed to have been talking about Communist China for four years now. Open housing has been on the agenda while Federal legislation has been passed and gone into effect. Another problem which confronts the League is the feeling among some of its leaders and a lot of its members that they only influence themselves.

"Are we just talking to ourselves?" Mrs. Benson asked in the course of our conversation. "Sometimes I think this is true, but it is not because League members want to talk just to themselves. It's because we lack financial resources to get our information out."

Throughout the country last year, the League spent almost $2.7 million, but only $447,000 of that made up the budget of the national office in Washington. As part of its 50th anniversary the League is seeking to raise its national budget by one-third. Funds for its national office come about equally from members' dues, which are around $10 a year and which are divided among local, state and national offices, and from contributions which members seek annually from businessmen. The League doesn't even pay all of Mrs. Benson's expenses as president. She spends three days a week in Washington and travels a great deal. "We have been and still are extremely poor," Mrs. Benson said, "and that's the honest-to-God truth. We still depend on voluntary contributions and that old sort of Lady Bountiful business."

Mrs. Benson and other League leaders think that the organization is probably more effective on the local and state levels than in national affairs. Local Leagues like to submit questions on key issues to candidates for public office, and these questionnaires often succeed in getting would-be fence-sitters to take positions on issues. Leagues have also helped to organize many successful campaigns for amendments to state constitutions and for reform of city charters.

But when it comes to influencing Congress or the executive departments in Washington, the League's role is much harder to assay. On a major issue before Congress there are so many pressures on both sides that it is difficult to know who is genuinely persuasive.

"Knowledge and tenacity are what we have," said Dorothy Sortor, a wide-eyed, attractive brunette who is congressional secretary—or chief lobbyist—for the League, when I asked her about the League's clout on Capitol Hill.

"League girls," Miss Sortor added, "like to read and they like to write. They know what's happening in the community, and congressmen are responsive to that. Members of Congress appreciate the quality of the letters that come in from the girls."

Senators and Representatives also appreciate the quality of the husbands of League members. Miss Sortor acknowledged that League members whose husbands are important men in a community are not above reminding Members of Congress of such not incidental facts. Sometimes the Senators and Representatives need no reminding because they quickly recognize the name of the League member who may be the wife of the president of the biggest bank back home.

As Miss Sortor makes the rounds of congressional offices she says that she still finds "a lot of men in government with a 19th century mentality."

"They say to you," Miss Sortor continued, " 'Oh, isn't it nice that you're interested in government?'

"Women," Miss Sortor added, "are still at a disadvantage intellectually, and the League is a place where a woman can shine on her own merits. There are no strictly 'woman' issues left anymore. But the League is a place for women who are committed, who have tenacity and who have ability and the time to stick with something. You can't be involved in the world and then just go home to raise babies."

The League also has served as a training ground for women who enter public life. Esther Peterson, a former Assistant Secretary of Labor, got her start by going to League unit meetings for coffee, gossip and serious discussion of issues, as did Mary Keyserling, who until recently was director of the Women's Bureau in the Labor Department. Other League members who made good in public life in the Washington area include Joy Simonson, chairman of the District of Columbia's Alcoholic Beverage Control Board; Kathryn Stone, a former member of the Virginia House of Delegates, and Margaret Schweinhaut, a Maryland State Senator.

Being serious-minded, the members of the League not only are always examining the world about them but are also always looking inward, too. Among other things, this means (in these days when it sometimes is easy to mistake a man for a woman on the street) that the League members are reexamining the need for a woman's organization a half century after women won the vote.

"The question is," League President Lucy Benson said as we talked about the League's future, "whether a women's organization *per se* continues to have any validity. Or is it anachronistic? There have been suggestions that we change our name simply to the League of Voters. Even bastions of female education like Vassar are going co-educational. There is all this student activism and interest in public affairs. Maybe we should make it possible for all young people and not just young women to get involved in the democratic process through an organization like the League."

Maybe. But it is hard to visualize men in a Rockville family room with clipboards at the ready, earnestly discussing poverty, seriously trying to understand its causes and laboriously trying to think, as one woman put it that morning in the McNatt home, "about what really we should be focussing on."

There is something about the slow, educational process of the League of Women Voters that seems to be peculiarly suited to the legendary patience of woman. Besides, man still needs a conscience, and in matters political the League of Women Voters is often as good a conscience today as the suffrage movement was 50 years ago.

RESOLUTIONS ADOPTED

The movement in the United States to obtain equal rights for women began at a small meeting in Seneca Falls, N.Y. on July 19, 1848. The women at this meeting demanded the vote and adopted the following resolutions:

"Resolved, That such laws as conflict, in any way, with the true and substantial happiness of woman, are contrary to the great precept of nature and of no validity, for this is 'superior in obligation to any other.'

"Resolved, That all laws which prevent woman from occupying such a station in society as her conscience shall dictate, or which place her in a position inferior to that of man, are contrary to the great precept of nature, and therefore of no force or authority.

"Resolved, That woman is man's equal—was intended to be so by the Creator, and the highest good of the race demands that she should be recognized as such.

"Resolved, That the women of this country ought to be enlightened in regard to the laws under which they live, that they may no longer publish their degradation by declaring themselves satisfied with their present position, nor their ignorance, by asserting that they have all the rights that they want.

"Resolved, That inasmuch as man while claiming for himself intellectual superiority, does accord to woman moral superiority, it is preeminently his duty to encourage her to speak and teach, as she has an opportunity, in all religious assemblies.

"Resolved, That the same amount of virtue, delicacy, and refinement of behaviour that is required of women in the social state, should also be required of man, and the same transgressions should be visited with equal severity on both man and woman.

"Resolved, That the objection of indelicacy and impropriety, which is so often brought against woman when she addresses a public audience, comes with a very ill-grace from those who encourage, by their attendance, her presence on the stage, in the concert, or in feats of the circus.

"Resolved, That woman has too long rested satisfied in the circumscribed limits which corrupt customs and a perverted application of the Scriptures have marked out for her, and that it is time she should move in the enlarged sphere which her great Creator has assigned her.

"Resolved, That it is the duty of the women of this country to secure to themselves their sacred right to the elective franchise.

"Resolved, That the equality of human rights results necessarily from the fact of the identity of the race in capabilities and responsibilities.

"Resolved, therefore, That, being invested by the Creator with the same capabilities, and the same consciousness of responsibility for their exercise, it is demonstrably the right and duty of woman, equally with man, to promote every righteous cause by every righteous means; and especially in regard to the great subjects of morals and religion, it is self-evidently her right to participate with her brother in teaching them, both in private and in public, by writing and by speaking, by any instrumentalities proper to be used, and in any assemblies proper to be held; and this being a self-evident truth growing out of the divinely implanted principles of human nature, any custom or authority adverse to it, whether modern or wearing the hoary sanction of antiquity, is to be regarded as a self-evident falsehood, and at war with mankind.

"Resolved, That the speedy success of our cause depends upon the zealous and untiring efforts of both men and women, for the overthrow of the monopoly of the pulpit, and for the securing to woman an equal participation with men in the various trades, professions, and commerce.

CAPT. A. T. LUTHER: ABLE PANAMA CANAL PILOT HONORED IN CANAL ZONE

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1969

Mr. FLOOD. Mr. Speaker, in the operation of the Panama Canal where there is compulsory pilotage, no professional group plays a more dramatic or vital part than canal pilots. Under Executive order and canal regulations, the pilots assigned to vessels have control of their navigation and movement within Canal Zone waters.

One of the ablest pilots in canal history was Capt. A. T. Luther of the Pacific terminal, whose service extended from the time of Chief Engineer John F. Stevens—1905–07—until his retirement in 1943.

A newsstory in the Panama Canal Spillway of February 20, 1969, gives an account of a recent visit by Captain Luther to the Canal Zone. The story records some of his early experiences, including a conversation with Chief Engineer Stevens who encouraged young Luther when he first sought canal employment. The article is illustrated by a picture showing Paul M. Runnestrand, executive secretary of the Canal Zone, greeting Captain Luther who, despite his advanced years, shows good health and vigor.

When inquiring about further details of Captain Luther's canal service, I learned that when the time came for him to retire, he called on his superior, Comdr. Miles P. DuVal, Jr., U.S. Navy, then in charge of marine operations of the Pacific sector of the canal, who persuaded him to remain for another year for special piloting assignments and to pass on in written form to those who followed some of the valuable lessons that he had learned from a vast experience as a tugmaster and pilot.

The result was a brochure by Captain Luther, in the preparation of which Commander DuVal collaborated, on "Handling of Tugs in the Panama Canal" issued in May 1942. This work proved to be the first such work in English since a booklet on towboat handling on the Mississippi River published in 1868 and it won wide acclaim for its wealth of knowledge on the act of efficient tug handling.

The indicated newsstory follows as part of my remarks:

[From the Panama Canal Spillway, Feb. 20, 1969]

EARLY CANAL PILOT RETURNS FOR VISIT

Capt. Arthur Taylor Luther, 88, known to the old family of Canal pilots as the "speed merchant" for his expediency in putting ships through the waterway, recently visited the Canal Zone where he had spent 40 years in the service of the Panama Canal organization.

Back in 1905, the young graduate of the Massachusetts Nautical Academy and crew member of the Panama Railroad Steamship Line *Allianca,* often expressed his desire to work on the Big Ditch as he watched the Stateside employees debark at the anchorage in Colon. On one such occasion, John F. Stevens, Chief Engineer for the Canal Commission, heard the young man say he had no fear of the fever, mud, and other hardships which had been enumerated to him. "That's the kind of men we want," remarked Stevens as he told him where to go to be hired.

Due to a mix-up in the paperwork and a return trip to the States, his work record dates back to 1906, when he was made master of a 16 inch French suction dredge. His first job was to dredge the French Canal from the entrance of the drydock to Gatun.

A most memorable experience in Luther's early career was recovering an old French ladder dredge which had been lying in the Chagres River for 19 years. It was full of water and jungle growth covered the dredge almost completely. Working in the torrential downpours of the rainy season, the jungle was cut away from the waterlogged dredge with machetes. Luther and his coworkers

subsisted on whatever food the jungle yielded and drank muddy Chagres water. It took them 2 weeks to free the dredge which was later repaired and put to work on the Canal. As a result of this ordeal he contracted black water fever and spent some time in the Colon Hospital.

After 9 years in the construction operations of the Canal, Luther was made a pilot but shortly after came the disastrous slides that blocked the Canal from September 1915 to April 1916. Luther went back to work for the Dredging Division. With the dredges working night and day, the Canal was again opened to commercial traffic and Luther returned to piloting. He remained a pilot for 30 years until his retirement in 1943.

As a lock pilot at Miraflores Locks before World War I, Luther joined the U.S. Navy. Because his work was vital to the Canal, he served in the dual capacity of mine field pilot and canal pilot while wearing the uniform of a Navy lieutenant. It was at this time that Luther was dubbed "speed merchant" when he handled as many as three battleships in Balboa Harbor in one afternoon.

After the Pearl Harbor attack, Luther piloted the aircraft carrier U.S.S. *Yorktown* through Gaillard Cut at night and in heavy fog. Following the Dredging Division tug *Chagres*, he sneaked through on what he calls his "secret" channel in the Cut. Luther recalls this feat as the highlight of his career on the Canal.

Canal Zone residents may remember his daughters, Mary, wife of James A. Driscoll, former assistant superintendent of the Dredging Division who left in 1955, and Martha, wife of Frank H. Lerchen, who retired in 1964 as assistant Engineering and Construction Director.

Captain Luther, who is a Roosevelt Medal holder, attended the Roosevelt Memorial ceremonies here in 1955.

During this visit he was given extensive tours on both sides of the Isthmus and kept a busy schedule since the moment he arrived on the *Cristobal* January 28.

Captain Luther originally planned to return to the States on the *Cristobal* trip last week but postponed his departure for 2 days to attend a luncheon-meeting in his honor hosted by the Canal Pilots' Association.

He returned to his home in St. Petersburg, Fla., February 15.

TRIBUTE TO THE AMERICAN LEGION

HON. WALTER S. BARING

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1969

Mr. BARING. Mr. Speaker, a great bulwark of our American way of life is seen in the dedicated service by the American Legion which this year is observing its 50th anniversary. This is a fraternity of service. The American Legion has a membership that encompasses four generations and the veterans of five wars.

I take this time, Mr. Speaker, to commend the Legion for its continued achievements and devotion to veterans over the years of service to God and country. And, for helping to maintain the security of this Nation.

The American Legion in the years to come, I am sure, will pursue the fine goals established 50 years ago in Paris at the cessation of hostilities in Europe. One great effort of the American Legion to especially note is the worthwhile program with America's youth as the Legion instills courage, understanding, devotion, leadership, patriotism, and good citizenship into the youth of today.

The Legion's work is found throughout the world and the accomplishments derived are surely a strengthening brace on which our American democracy and society rests safely.

HARASSING OF BUSINESSMEN BY EQUAL EMPLOYMENT PERSONNEL

HON. PAUL J. FANNIN

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Monday, March 24, 1969

Mr. FANNIN. Mr. President, I have often referred to the confusion created by the number of agencies involved in policing equal employment rights. I have pointed out that many companies have been besieged by personnel from the Equal Employment Opportunity Commission, the Office of Federal Contract Compliance, and other individual agencies, all determined to see that their own versions of equal employment programs are maintained.

So far as I have been able to determine from many sources, the personnel of these agencies are not concerned with seeing that the law is complied with; rather, they see their duty as one to belittle, embarrass, bully, and abuse American industry for failure to make up for alleged past misdeeds. As time goes on, these people are becoming increasingly arrogant and insulting. I think that it is high time that the personnel of these agencies learn that there are limitations on their power. Judging from recent reports, they might also learn simple manners.

Mr. President, I ask unanimous consent that there be printed in the RECORD a letter and enclosures which I recently received illustrating only a part of what employers must put up with under the guise of equal employment. It is hard enough on employers to comply with the many regulations and to accomplish the many forms and questionnaires issued today without being subjected to fishing expeditions conducted by misguided zealots. I often wonder whether the objectives of these persons are intended to coincide with the best interests of the United States.

There being no objection, the letter and enclosures were ordered to be printed in the RECORD, as follows:

SOUTHWEST FOREST INDUSTRIES,
Phoenix, Ariz., March 3, 1969.

Hon. PAUL A. FANNIN,
U.S. Senate,
Washington, D.C.

DEAR SENATOR FANNIN: I applaud and support your efforts to create some order and consistency out of the present confusion created by the multiplicity of agencies involved in policing the Civil Rights Legislation and Equal Employment Regulations issuing from Executive Order 11246.

In addition to being thoroughly investigated by the EEOC, Southwest Forest Industries has been investigated by compliance review teams from the Agriculture Department, Post Office Department and Small Business Administration. We have just received word that next month the Defense Department will have their turn at one of our operations.

The time taken up by the representatives of the various agencies is not inconsiderable, and each agency has a somewhat different idea as to what actions a company should take to demonstrate its affirmative action in providing equal employment opportunities. Southwest Forest Industries employs approximately 3,000 men and women. Over 35 per cent of the employees come under one or another of the Government classifications of minority races. These minority race employees are laborers, operators, clerks, salesmen, skilled craftsmen and supervisors. With the large amount of discrimination which is allegedly occurring across this nation, we are hard pressed to understand how all of these agencies are able to find time in their schedules to investigate us separately.

Your efforts to correct this situation are appreciated.

Sincerely,

D. H. BROKAW.

P.S.—Take a look at the enclosed copy of a just received Defense Department letter and request for information they want. Consider how many man hours of work will be required to collect and prepare the data requested.

DEFENSE SUPPLY AGENCY,
11099 South La Cienega Boulevard,
Los Angeles, Calif., February 26, 1969.

Mr. ROBERT SCHILLING,
Southwest Forest Industries,
Santa Fe Springs, Calif.

DEAR MR. SCHILLING: Confirming our conversation of 25 February 1969, I will visit your facility at 9:30 a.m. on 18 March 1969 for the purpose of conducting a review of your Equal Employment Opportunity program.

In preparation for the review, it is requested that certain information be made available during the visit. A check list of the information desired is enclosed along with a blank SF–100 which should reflect current employment statistics.

I look forward to our visit and wish to express my appreciation for your cooperation. If you have any questions concerning the review you can reach me at (213) 643–2246.

Sincerely,

JAMES A. GARFIELD,
Contractor Relations Specialist,
Office of Contracts Compliance.

LIST OF MATERIAL THAT SHOULD BE PREPARED IN ADVANCE OF THE REVIEW—ONE COPY OF EACH ITEM CHECKED WILL BE NEEDED

√ 1. One copy of your last previous Standard Form 100, EEO–1 Report.

√ 2. Current employment statistics entered on a Standard Form 100.

√ 3. List of all departments by name, indicating the total employment and total minority employment in each. For those departments having minority employees, identification of each minority person by name, race, sex, date of hire, current job classification, and rate of pay.

√ 4. A list of all recruitment sources (employment agencies, schools, colleges, Federal and civic organizations, and so forth) showing job categories for which each is used, and sample copies of job orders.

√ 5. Copies of recruitment advertising, including college recruitment brochures, if any.

√ 6. Statistics denoting the total number of applicants during the last 3 months showing, separately applicants for white collar and blue collar positions by sex, indicating the number of minority group persons by race in each category.

√ 7. List of new hires during the last 3 months, or the last 100 hires, still on the

payroll, showing name, race, job into which hired, pay rate, and date of hire.

√ 8. List of all significant changes in classifications by promotions and transfers of employees involved, and showing the classifications and departments losing and gaining the employees. (3 months)

√ 9. List of company-sponsored or supported educational and training programs and activities showing current employee participation in each, with minority group participation shown for each.

√ 10. List of all terminations during past 3 months, or the last 100, by name, race, sex, job classification, and rate of pay.

√ 11. Copies of all collective bargaining agreements and the seniority lists and progression charts provided for therein.

√ 12. Evidence of notification to collective bargaining agent(s) of Federal contractor status. (Posting EEO posters suffices—60–1.42b)

√ 13. Current seniority list, identifying minority group employees. In the event a seniority list is not applicable, a list of all employees, identifying minorities by race, and showing date of hire and current job title.

√ 14. An estimate of manpower needs, by department or job category, for the next 12 months.

√ 15. Copy of the Company Equal Employment Opportunity Policy, and copies of material indicating management follow-up to monitor awareness of the policy by supervision.

√ 16. List of affirmative actions taken to implement the EEO program in the past 6 months.

√ 17. A copy of a Certificate of Nonsegregated Facilities as prescribed by ASPR Section 2–201(a)(xli).

√ 18. A copy of your written affirmative action program as directed by OFCC's Rules and Regulations 60–1.40.

ADDRESS BY SENATOR EDWARD KENNEDY BEFORE THE NATIONAL RURAL ELECTRIC COOPERATIVE ASSOCIATION

HON. JOHN BRADEMAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1969

Mr. BRADEMAS. Mr. Speaker, last week the National Rural Electric Cooperative Association held its 27th annual meeting at Atlantic City, N.J. On Tuesday, March 18, I had the pleasure, along with the distinguished senior Senator from Massachusetts, Senator EDWARD M. KENNEDY, of addressing the delegates of this convention.

Senator KENNEDY's speech recognized the crucial need for this Nation to stem the tide of migration from rural to urban areas. He also spoke of the critical electric power problems facing America today.

Mr. Speaker, I insert at this point in the RECORD the text of Senator KENNEDY's forward-looking speech proposing an eight-point program for guaranteeing the advance of low-cost, reliable power consistent with the capabilities of our society:

ADDRESS BY SENATOR EDWARD M. KENNEDY BEFORE THE NATIONAL RURAL ELECTRIC COOPERATIVE ASSOCIATION, ATLANTIC CITY, N.J.

It is a pleasure for me to be here today, with the leaders of our nation's rural electric cooperatives. Cooperatives have a long and distinguished record—not only of supplying low-cost power, but also of advancing the public interest; not only of bettering the lives of rural Americans, but also of building a balanced economy for our country as a whole.

HISTORY OF RURAL COOPERATIVES

In the depression years of the 1930s, this nation recognized the priority of rural development. We recognized that low-cost electricity was the cornerstone of economic progress. And we recognized that cooperatives are an effective framework to achieve that goal. We moved forward with an REA program which has been an outstanding and resounding success.

When I say "we," however, I certainly do not mean that every American back in the 1930s recognized the potential of rural electric cooperatives. One utility spokesman at the time was rather confident about the subject. In 1935 he observed:

"Only in the imagination of the farmer's champion does there exist any widespread demand for electric services on the farm, or any general willingness, or ability to pay for it. With the present low average of farm income, the electrification of all farms, desirable as this may be from a social viewpoint, is clearly an economic impossibility."

In the face of opposition like that, you cooperative leaders have certainly come a long way.

And there is a lesson from your success. You have shown that when determined rural Americans get together, you can handle the most difficult tasks. You have demonstrated that with a strong REA program, the goal of rural development is anything but an economic impossibility.

Your record is an impressive one. When the REA Act was signed by President Roosevelt in 1936, only 10 per cent of America's farms were served with electric power. Today, over 98 per cent are served.

You have nearly 1000 consumer-owned cooperatives in 46 states. You supply electricity to over 20 million Americans. You bring its benefits to over 150,000 new consumers every year.

Even though I come from an urban state in the Northeast, I am well aware of the significance of this growth. Let me give you an example of what rural electric development—and the dedication of the members of the NRECA—has meant in one specific case.

A decade ago, in the Blue Ridge Mountains of North Carolina, the economy was dying; jobs were scarce; people were moving with increasing rapidity to the cities.

Then the Blue Ridge Electric Membership Corporation, a consumer-owned electric cooperative, came into the picture, and its members went to work. They recognized the potential of rural areas. They worked closely with community leaders. They sparked a broad economic development drive. They achieved spectacular results.

Today, in the five Appalachian counties served by Blue Ridge, there are 8,000 more jobs than in 1962. Five thousand new homes have been built in the last four years. Ten new high schools have been constructed since 1960. A technical institute and a community college have been built. The tourist and recreation business is booming.

You at the NRECA, however, can accomplish this kind of progress only if the REA is responsive to your needs. And this can happen only if the Administration and the Congress of the United States respond with determination to the budget requirements of the REA.

President Kennedy recognized this only too well. In Billings, Montana, on September 22, 1960, he pledged of his Administration: ". . . we will restore REA to its former role of preeminence, bringing it from costly concern over political interference, higher rates of interest and budgetary starvation, and enabling that remarkable American institution to get on with its work of providing low-cost electricity and telephones for every American farm family."

Shortly after he took office in 1961, President Kennedy asked Congress for a $50 million increase in REA 2 per cent loans. Congress approved.

The next year he sought an additional $100 million, over and above the initial $50 million. Congress again approved.

In the first two years of his Administration, the budget for REA loans to "rural electrics" was doubled. Congress supported the Administration requests.

This is the kind of action in the Executive and in Congress which is so important to the cooperative movement. And now is the time, at the start of a new Administration, when we must be alert to your concerns.

NEED FOR RURAL-URBAN BALANCE

We are constantly confronted with the unmet problems of our cities. Yet you, who live in our rural areas, know that a large part of these problems can be met by paying greater attention to developing an even stronger rural economy.

You must continue your leadership in developing job opportunities in our rural areas. Only then will there be the balance between urban and rural America which will slow the rural-urban migration. In recent years, nearly 600,000 people a year have left the countryside and journeyed to the cities in search of jobs and shelter and medical care. In the cities, they have found that their hopes are not fulfilled.

Unless we halt the tide of migration from the country to the city, a migration which puts more and more people into less and less space, we have little hope of making our cities livable. You and your organization and its work can restore promise to the countryside—the promise of jobs, of good schools, of modern medical facilities, and of all the other elements so important to raising the quality of life. This is perhaps the most critical aspect of the tasks which lie ahead for you and your friends.

EIGHT-POINT PROGRAM FOR RELIABLE POWER

In light of your responsible approach to electric power development, this NRECA annual convention is a particularly suitable forum for a broad look at the electric power problems and issues which confront us today. I think we must view them as part of a more general program to enhance our social and natural environment.

I would like to present what I think is an effective program of guaranteeing the advance of low-cost, reliable power consistent with the enhancement of the quality of our environment.

I would like to discuss this eight-point program with you today.

RURAL ELECTRIC COOPERATIVES

First, rural electric cooperatives. Recently, Congress has failed to appropriate enough REA loan funds to meet your needs. It has rejected legislation to provide supplemental funds.

As a result, there are at present almost $400 million in applications pending in the REA—but there is less than $100 million available to meet these needs.

I know that the NRECA is considering the idea of a self-help financing institution. I know further that you are alert to the danger of supplemental financing. You are aware that opponents might try to use it to weaken the REA loan program.

If you decide to adopt supplemental financing. I urge you to keep up the fight for REA loans as well. You will have my support and cooperation on both fronts. I will support full funding. I will support needed loans at 2 per cent interest. I will support loans to distribution co-ops. And I will support loans to necessary G and T's.

PLANNING AND COORDINATION

Second, planning and coordination, no longer can we afford the overlap and the inefficiency of building facilities on an ad hoc basis. Rather, all systems in each region of the country must work together to look 10, 20, 30 years down the road.

The benefits of coordination have been recognized by most members of the industry. Many have made attempts at regional planning. But the industry on its own has not moved far enough or fast enough.

And far too often, emerging councils have been overly restrictive. They have failed to follow a critical planning principle. I know you endorse that principle, and I stress it here today: all utility systems in a region must have equal access to participate in planning and coordination on fair and equitable terms.

In particular, all systems—large or small, public or private, cooperative or privately-owned—must be offered reasonable opportunity to share in the output of large new plants.

I supported the Kennedy-Aiken bill last year. I will continue to support similar legislation in this session of Congress.

Effective planning also requires better research and development. For both utilities and the Federal Government have neglected their responsibilities.

Manufacturers, rather than utilities, have borne most of the R. & D. expense in the field of electric power. The result, predictably, has been an over-emphasis on efficiency of equipment.

It is a distortion of priorities that an industry which received $15 billion in operating revenues last year spent only $37 million—less than ¼ of one per cent—on research and development. Surely this figure can be doubled or tripled, and I urge all utilities to make the effort.

When appropriations and power legislation are considered in the Senate, I will stress the need for a more balanced R. & D. program in the electric power field. The Federal Government has spent over $2 billion to develop the technology for nuclear generating plants. Surely a small fraction of that sum can now be spent on environmental and social protections.

SITING OF POWER PLANTS

Third, siting of power plants. With demand for electricity doubling every decade, an estimated 250 huge new generating plants must be built by 1990. Each will require a site containing several hundred acres. These plants will bring light and power to our people. But they can bring dangers as well—to the environment, to the residents of surrounding areas and to the structure of the whole electric utility industry. Only planning beforehand can ensure that these plants are safe, efficient, reliable and consistent environmental protection.

For the past several weeks I have been revising the Electric Power Plant Siting Act which I sponsored last year. I intend to introduce it shortly in the Senate. Today, for the first time, I would like to discuss some of its features.

Under my bill:

The Federal Power Commission would study all considerations affected by the decision of where to build a power plant: air and water pollution, effect on ecological balance, scenic beauty and recreation possibilities, geological feasibility, and economic efficiency.

The FPC would develop siting criteria and prepare an inventory of sites for all regions of the country.

The FPC would update the siting plan every year. Thus changing technology would be taken into account—for example, changes which may someday make it safe to locate plants in cities.

The FPC would consult with all government agencies experienced in specific aspects of the problem.

At every stage, the FPC would consult with concerned citizens, local planning agencies and the utilities.

During the initial two-year period of the study, certain restrictions would be placed on the construction of new plants. Utilities would be required to comply with existing pollution standards, and to give assurance that serious harm to the environment would not occur.

When this legislation is introduced I would appreciate the suggestions—and hopefully the support—of the NRECA.

RELIABILITY

Fourth, reliability. Blackouts are a clear and present danger, and the situation will continue to get worse unless we plan now to prepare for the future.

The northeast blackout of 1965 and the P-J-M failure of 1967—these and other disasters have dramatized for all Americans that blackouts are inconvenient, costly and dangerous to public health and safety.

We have had in my own state of Massachusetts four outages in the last three months. These have emphasized and re-emphasized the disruption and frustration which accompany any loss of electricity. And scores of blackouts throughout the country have highlighted the need for remedial action at the Federal, state and local levels.

Last month I introduced the Electric Power Reliability Act of 1969, a revision of legislation I sponsored last year. Let me summarize that bill:

The FPC would oversee the formation of effective regional planning councils throughout the country.

Full participation and influence in the council would be given to every utility or group of utilities in the region.

Each council would develop a coordination plan for its region, providing inter-ties, backup facilities, and other measures to minimize the effects of failure in one part of the system.

The FPC would establish minimum standards of reliability.

Construction of extra-high-voltage generating and transmission facilities would have to conform to the overall plan and meet the reliability standards.

The FPC would have power to compel steps necessary for reliability and efficiency.

Hearings on an identical House bill are starting next week. I hope that the Senate will give equal consideration. And I hope that the NRECA, which endorsed quite similar legislation last year, will continue its responsible interest.

Most blackouts are preventable. When they are not, their effects can be minimized. There is no good reason why the deficiencies of the past must be tolerated in the future.

EFFECTIVE TECHNIQUES FOR POWER PRODUCTION

Fifth, At this very moment, controversies over power facilities are raging from Chesapeake Bay and Long Island Sound in the East to the Columbia River in the West. Everywhere the challenge is the same: to preserve our environment while seeking reliable and low-cost power.

The problem is complex. Fossil-fueled plants cause far more air pollution than nuclear plants. But nuclear plants produce dangerous radioactive waste.

And nuclear plants threaten far more serious thermal pollution than their fossil-fueled counterparts. While overheating of our waterways can be avoided by cooling towers, these may become unsightly blights on the landscape. For the most part, however, nuclear plants can be blended more skillfully than others into surrounding areas.

Let me emphasize the positive as well as the negative. Thermal effects need not pollute; they can also enrich. Superheated water might be used for example, to cultivate fish cultures, to heat buildings, and to prevent ports from freezing over. Other benefits from power facilities should be explored.

With some variation, both the siting bill and the reliability bill which I mentioned provide for councils on the environment. These councils, composed of conservation experts, would advise and work with the FCC on environmental aspects of its decisions. The bills contain other environmental safeguards, and would go a long way toward assuring balanced growth—with full consideration of the conservation interest.

Finally, I look forward to the day when unsightly overhead wires will be gone from our scenic landscapes. The industry itself has shown commendable interest in putting transmission and distribution lines underground. What is needed now is further research to develop effective and economically feasible techniques. All must contribute. As a start, I urge funding of the Department of Interior's industry-government research program on undergrounding.

All of us must recognize the urgent demand for electric power and the necessity for new facilities. We cannot simply say "don't build here." Rather, interested parties must work together toward solutions which accommodate both the need for additional electric power and the need for environmental preservation.

CONSUMER PROTECTION

Sixth, consumer protection. Consumers of electric power are a captive market. Utilities are granted exclusive privileges by the states. In return, utilities have an obligation—to inform and consult with those so vitally affected by what they do.

Cooperatives have always operated on the principle of consumer participation. It is the basis of your success. And the lesson is clear: All utilities must develop greater public contact with a priority on the public's interest.

Consumers deserve courteous and efficient service. They deserve swift repair when breakdowns occur. They deserve to be informed of what utilities are doing. Unfortunately, this attention is often lacking.

I am disturbed, for example, by complaints that during recent blackouts consumers were unable to phone their utility company to report that the power was off. It sometimes took hours to get through. And when calls were finally connected, customers received an unresponsive recorded message.

In addition to service, vigorous maintenance of the lowest possible rates is perhaps the most important form of consumer protection. As a New Englander, I am especially sensitive to the problem. For we pay nearly the highest rates in the country for our electric power.

Frequent and thorough investigation of rate structures is absolutely critical. Only with full knowledge, gathered by objective bodies, can we determine whether rates should be raised or reduced.

Far too many states have failed to protect their people in this regard. Regulatory commissions have been weak, understaffed, and dependent for information on the very utilities they were set up to regulate.

To meet some of these problems, I have cosponsored Senator Lee Metcalf's bill to promote utility consumers' counsels. The bill would create a Federal agency to act as an ombudsman on utility matters. It would provide support to similar state agencies.

Consumer councils would appear before state and Federal regulatory bodies. They would publicize relevant information about utilities. And they would firmly assert the consumer interest at all times. I join the NRECA in supporting this bill.

DICKEY-LINCOLN DAM

Seventh, the Dickey-Lincoln dam. When a utility receives a government-granted mo-

nopoly, there is no pressure of competition to ensure efficiency and consequent low rates. We have no standard by which to judge its performance.

In New England, I will continue to fight for the Dickey-Lincoln Dam project. It would serve as a source of low-cost power, and a yardstick for judging other rates in the area. And it would serve as a backup during blackouts, as well as during peak periods.

The feasibility of Dickey-Lincoln has been confirmed time after time. Congress has authorized the project. It must now vote funds to move ahead at last. I pledge to continue the fight.

SOCIAL RESPONSIBILITY

Eighth, social responsibility. These are turbulent times. Unrest and dissatisfaction plague our rural communities and our crowded cities. We are the richest nation on earth. But we have failed so far to meet our most pressing domestic problem.

Electric power utilities constitute one of the largest industries in the United States. They have the opportunity and the responsibility to help improve the lot of every American.

Cooperatives have a solid record on this score. You have advanced the broad economic development of rural America. You have supported important measures for the cities. You have worked to promote the rural-urban balance so necessary for a prosperous nation.

The utility industry as a whole, however, still employs only a very low percentage of Negroes, Mexican-Americans, American Indians, and other members of minorities.

Again, cooperatives have made substantial contributions—especially in setting up co-ops in areas where a majority of the benefitting members have been from minority races.

I would urge all segments of the industry to continue to make a strong effort toward equal opportunity. The industry can eliminate racial discrimination in its hiring practices. And it can actively seek out minorities in its membership, its leadership and its staffs.

The electric power industry, with over half a million employees, is uniquely capable of developing programs for the unemployed and underemployed. Some progressive utilities have already initiated on-the-job training. Many have an opportunity to provide manpower development activities for the less advantaged in our society. All can learn from the attention to jobs given by rural cooperatives.

I know that you are constantly exploring ways in which you can assist the people you serve. I sincerely hope that the whole utility industry will follow your lead, and will capture the opportunity to meet public needs.

You are important to the future of this nation—no only because you daily strengthen rural America; not only because you bring better lives to millions; and not only because you plan to be aggressive in continuing your impressive work. You are important to America because whatever work you do in the countryside makes lives in our cities better; makes economic development greater; makes our nation as a whole stronger.

This is the challenge which the NRECA has recognized since its founding, and the challenge which remains with us today.

Because of you, millions of Americans are participating in our economy and society in a meaningful way.

As we applaud the past efforts of the thousands who are gathered here today, let us rededicate ourselves to the unfinished agenda of effort that remains.

This is the spirit of the men and women you represent in rural America.

And it is in the spirit of this splendid organization which I am pleased to have addressed today.

DEATH IN VIETNAM

HON. ERNEST F. HOLLINGS

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, March 24, 1969

Mr. HOLLINGS. Mr. President, recently the St. Louis Post-Dispatch published an article entitled "We Died in Vietnam." The subject of the article was the awesome responsibility carried by those who have the task of negotiating a peace in Vietnam while the death toll continues. The article, written by R. J. Henle, S.J., academic vice president of St. Louis University, was brought to my attention by William I. Bouton, of Greenville, S.C., whose son recently was killed in Vietnam while serving as a first lieutenant in the U.S. Army.

I believe that the thought expressed in the article will be of interest to Senators. I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"WE DIED IN VIETNAM"

THOSE WHO STALL NEGOTIATIONS CARRY HEAVY RESPONSIBILITY FOR CONTINUED TOLL

(By R. J. Henle, S.J.)

Gulliver reported, on his return from one of the "remote nations" of the world, that the Lilliputians were in violent disagreement with their neighbors over whether eggs should be eaten by breaking the small end or the large end first.

Deep theological and political passions surged between the large-enders and the small-enders; invective and counter-invective resulted in bloody violence.

Would that some Jonathan Swift could transpose the tragic comedy of the Parisian talks to the context of a "remote nation" of the world, so as to display to all the absurdity of the round-tablers and the long-tablers of the protocol, propaganda, and face-saving of Paris.

All this would be comedy, were it not bitter tragedy in that, for every hour of delay, human beings are being burned and blasted and blown to pieces in Vietnam. Whatever one thinks of the justice, of the rightness of the Vietnam war, the spectacle of delays while men die is sickening.

In Henry V, Act IV, King Henry, incognito at the campfire, says: "Methinks I could not die anywhere so contented as in the King's company, his cause being just and his quarrel honourable." Young Williams, not knowing that he spoke to the King, replied: "That's more than we know." And Bates: "Ay, or more than we should seek after; for we know enough if we know that we are the King's subjects. If his cause be wrong, our obedience to the King wipes the crime of it out of us."

And, finally, Williams: "But if the cause be not good, the King himself hath a heavy reckoning to make when all those legs and arms and heads, chopped off in a battle, shall join together at the latter day and cry all 'We died at such a place'; some swearing, some crying for a surgeon, some upon their wives left poor behind them, some upon the debts they owe, and some upon their children rawly left. I am afeard there are few die well that die in a battle, for how can they charitably dispose of anything when blood is their argument? Now if these men do not die well, it will be a black matter for the King that led them to it . . ."

And it will be a black matter for those responsible for the continuance of the Vietnam tragedy and a black day when those shredded bodies stand before God at their resurrection crying all, "We died in Vietnam."

There should be an arrangement by which, for each established death in Vietnam, black-bordered telegrams be delivered to the head of each delegation in Paris naming the deceased, his age, the place of his death and its hour, and surviving relatives. As these telegrams pile up, they may be a memento of the hours of futility in Paris. Or a great sign, such as we use to proclaim traffic fatalities, might be erected across from the front door of each delegation in Paris and each casualty in Vietnam be registered in large numerals with the striking of a dismal death knell.

How can men pause or take their ease, when this chopping off of heads and arms continues because of their failure to negotiate sincerely for peace?

FRANK W. BOYKIN

HON. JACK EDWARDS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1969

Mr. EDWARDS of Alabama. Mr. Speaker, the Mobile Register newspaper published on March 13 an excellent tribute to a remarkable man. In order that it be shared with more Americans I place it here, as follows:

FRANK W. BOYKIN

From rural obscurity as a 35 cents a day water boy to the national spotlight both in public and private life is a rare career.

So rare, indeed, that Frank W. Boykin will be remembered as one of few to experience it in the fullness of reality which he lived to do.

His achievements in influence and wealth after he left his native Bladon Springs in Choctaw County for Mobile and Washington in search of greater opportunities for ambition, and greater outlets for energy, gained prominence for Mr. Boykin.

He was indefatigable in this search. But no more indefatigable than he was enthusiastic and optimistic.

He once quoted the late Gov. Bibb Graves of Alabama, "I will just keep on keeping on," and adopted the phrase as also a motto for himself.

He had the privilege of pursuing that motto longer than most men and he remained steadfast in the pursuit until at last death intervened to end his career at the age of 84 years.

But Frank W. Boykin will live in memory and in history not first of all for achievements in business and politics, not first of all because he grew wealthy in multiple holdings in private enterprise or because he became known literally to multitudes of his fellow Americans as a colorful congressional figure of influence and distinguished appearance.

Nor will he live in memory and in history first of all for public service as a long-time member of the U.S. House of Representatives from the First Alabama District. Much as this service may be appreciated and should be appreciated, it is not the prime reason for which he will be remembered.

His exuberant, spontaneous friendliness toward his fellowmen exceeded all else in assuring that Frank W. Boykin will not soon be forgotten.

Those whom he knew long and well, those whom he knew only casually and those whom he knew not at all—all of these knew the warmth of his greeting, the cordiality of his smile, wherever he and they met.

He translated his exhilarating, unfailing friendliness into a household term—"Everything is made for love"—and wherever he went and whomever he saw he demonstrated his esteem for others, whatever their walk or station in life.

It truly may be said that Frank W. Boykin was blessed with much of which there is too little in this world: Uninhibited friendliness.

This quality of his personality lives after him as an example in need of wider and more frequent practice by men who travel this way but once.

PART-TIME EMPLOYMENT OF RETIRED PERSONS

HON. WALTER F. MONDALE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, March 24, 1969

Mr. MONDALE. Mr. President, as a member of the Special Committee on Aging and as chairman of the Subcommittee on Retirement and the Individual, I have long been interested in the problem retired persons face with respect to part-time employment. Too often retirees are confined, long before they are incapacitated, to lives devoid of the stimulation and enjoyment work can bring. I have been convinced that retired persons are a wasted manpower resource, but that it takes imagination and resourcefulness on the part of employers to make effective use of the skills older persons may possess.

The John Deere Co., Waterloo Tractor Works has pioneered in using retired employees in its plant, and recently has created a program that ought to be examined throughout this country. Matching the need for persons familiar with the plant to the need of retired persons for jobs, the company now is using its former employees as tour guides for the 14,000 persons who visit their plant annually.

An article published recently in the Bulletin of the Institute of Gerontology at the University of Iowa describes this imaginative program.

I ask unanimous consent that the story of this pioneering venture be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JOHN DEERE'S USE OF RETIREES MAY SET NATIONAL PATTERN

An idea born at the John Deere Waterloo Tractor Works may spread to other large industries throughout the United States, and even become world-wide, setting a new pattern for the effective use of retirees. Innovator of the plan is Bush Dodd of Cedar Falls, member of the Deere sales department in charge of plant visitations. Before the "idea" employees were selected daily from production and sales departments to conduct plant tours. Production suffered as men were drawn from assembly lines and machine shops. "Foremen hated to see us coming," states sales manager Lyle Cherry.

Then came the idea. The plant is visited annually by some 14,000 persons. Why not use retirees who knew the plant's layout, tractor-building processes, and the job skills involved. These former employees not only possessed great loyalty to Deere, but cared deeply about Deere's "image." Why not employ this heretofore unused highly skilled, knowledgeable labor group as tour guides? Many were still active and still very much interested in the plant where they had spent most of their working life. Also, retirement incomes would be supplemented. Thus, the program appeared to have many mutual advantages.

Dodd's idea was a welcome solution to a problem, but no sooner had it become operative when another problem appeared. Putting retirees back on the payroll would involve tremendous paper work—pension adjustments, accident and insurance coverage, income tax withholding—and might also affect their Social Security benefits. The problem seemed insurmountable until an outside agency engaged in the business of supplying part-time personnel agreed to handle the hiring, payroll, and other paper work.

After final details were worked out, the retiree-guide system was initiated in the fall of 1966 and at present has about fifty guides. "We try to have enough so the tours won't become a burden on the retirees. Nothing is compulsory. If a retiree has scheduled other activity on a day we call him to take a tour, he is not pressured. A man who is retired should be able to call his time his own."

Qualifications for the tour guides include capacity to walk four or five miles a day, knowledge of the plant, and "he must like people. It's hard work—talking and walking." Mr. Cherry states that "Enough retirees are used to handle the tours without the Social Security $1,630 limit on earnings being affected."

Mr. Dodd, in an appraisal of the program, said, "I would certainly recommend this procedure when part-time help is needed. We have found these gentlemen sharp and eager, having a deep desire to improve themselves in the knowledge of the product; and they have become skillful and tactful in the handling of our people. Their vast knowledge of our operation has been helpful, and from the standpoint of good public relations, the program has been outstanding. These people feel they still have a value and that John Deere still has an interest in them, so it has been a successful venture."

HOW CAN WE BEST GET LAW AND ORDER?

HON. CHESTER L. MIZE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1969

Mr. MIZE. Mr. Speaker, in the February issue of Nation's Business, readers were given the opportunity to sound off to the editor on the question: "How Can We Best Get Law and Order?" It is my understanding that the response to this question brought the largest number of replies any "Sound Off" question has in a long time. These responses are a good cross section of the mood of the Nation in dealing with this problem and should provide a reliable guide to legislators and law enforcement officers. Under leave to extend my remarks, I wish to place in the RECORD the "Sound Off" question, the explanation of the question, and a sampling of responses to the question:

SOUND OFF RESPONSE: HOW CAN WE BEST GET LAW AND ORDER?

The nation's soaring crime rate is one of the gravest problems that confront Americans. Latest FBI statistics show a crime increase of 19 per cent for the first nine months of 1968, with robberies up 32 per cent and murder, rape, assaults all jumping sharply.

Together with crime is a widespread disdain for authority.

Law and order was a major issue in the Presidential campaign. President Richard M. Nixon, Democratic nominee Hubert H. Humphrey and Independent George Wallace all cried out for a curb on crime.

The need for law and order is a fact with which no one can quarrel. How best to attain it is another matter.

Many contend the nation will never solve its crime problem until the "root causes" for it are cured. Crime commissions, sociologists and others say that among these are a lack of jobs for the disadvantaged, slum housing, an unrealistic welfare program, and sham rehabilitation programs for juvenile delinquents and convicted criminals.

Just as many brand as "hogwash" the contention that poverty alone is responsible for crime. They decry poverty, but claim that this can't excuse criminals, that what is needed to stop crime is a tougher attitude by courts toward those who rob, rape, murder and mug, along with beefed up police forces. They also call for less permissiveness and more respect for our established institutions.

Slums may well be a breeding place for crime. But FBI statistics show increases of crime in affluent suburbs and rural areas as well.

How can we best attain law and order? What do you think?

Get tough with the lawbreakers.

That's the opinion of a majority of Nation's Business readers responding to February's "Sound Off" question, "How can we best get law and order?"

An outpouring of responses shows many definite opinions.

Many feel poverty and unemployment must be eliminated. But they stress this alone is not enough. For an immediate cutback on crime, Nation's Business readers look to the judicial system and the law enforcement agencies.

The most common criticism—that courts are too lenient—was coupled with the protest that policemen are not given enough power to carry out their functions and are not backed by the courts.

"There is only one way to have and maintain law and order. Quit coddling the lawbreaker!" writes C. L. Thayre, president of the Farmers and Merchants Bank in Cherry Tree, Pa. "Let's give our police some backing. You don't hear the law-abiding citizens crying 'police brutality'."

"We seem to have come so far in protecting the rights of the individual that we are forgetting that society has a right to protect itself from lawlessness. We need speedier trial procedures and courts that will support rather than hamper law enforcement," Keith Brown, secretary and treasurer of Sealrite Manufacturing Co., Kansas City, Mo., says.

R. T. Ball, administrative supervisor of West Virginia Pulp and Paper in Charleston, S.C., advises, "Reverse the recent findings of the Supreme Court which have handcuffed law enforcement personnel in favor of the criminal."

"The problem lies with the inefficiency of the courts," James S. Jackson, president of The Boston, Inc., New Philadelphia, Ohio, says. "We will have no better conditions in this country until we have judges who have the guts to serve a penalty to lawbreakers."

"The judicial process takes too long," says W. Clarence Kimbrell, chairman and president of Kimbrell's, Inc., a chain of furniture stores in North and South Carolina. "Interminable delays and appeals must be eliminated. Appeals should be fast and decision quick. The men and facilities to apprehend and prosecute should be beefed up."

"The overcrowded conditions of the courts and the leniency of these courts have created our biggest problem," says Philip R. Hoffman, president of Hoffman-Marquard Machinery

Co., St. Louis, Mo., and, the American Machine Tool Distributors Association, Washington, D.C. "Many crimes are committed by men who are currently out on bond awaiting trial. As long as the judges extend freedom on bond, change of venue and delays offered by defense attorneys, these unemployed lawbreakers will pursue crime. The problem is not with the police."

S. Whitney Downer III, regional manager of Bell & Howell Co., in Westfield, N.J., says, "Police should have power to search 'suspicious' persons or dwellings. Where trial is required, it should be as soon as possible after the indictment. Guilt should be established on the facts, not the procedure of the arrest and jurisprudence surrounding the crime. Improper procedure should give cause for a new trial, not freedom to a heinous criminal."

"A liberal sickness permeates our judicial system," Logan Young, president of Forristal-Young Sales Co., St. Louis, Mo., says. "Recent Supreme Court decisions leave little hope for any foreseeable improvement."

"Slums may be a breeding ground for the crime germ, but the courts could be penicillin instead of just aspirin. It stands to reason that the tougher the consequences, the fewer people would take the risk of committing crimes," writes Frank Latham Jr., president of Texas Security Systems, Inc., Austin, Tex.

"Courts should hand out penalties and make them stick," says E. M. Everson, manager of J. C. Penney Co., Inc., in Beaver Dam, Wisc. "Speed up court actions by eliminating silly technicalities and eliminate retrials except in obviously necessary situations. Elevate the police to the position of respect formerly held and forget about so-called police brutality."

"Swift, sure justice to offenders is the best deterrent to crime and violence," Paul McHenry, vice president of Macmillan Ring-Free Oil Co., Inc., of El Dorado, Ark. says.

Readers were particularly firm in their views toward crime repeaters.

Vernon Miller, president of Alvern Boat Shop., Inc., Northport, N.Y., calls for "no bail and stiff prison sentences for second offenses," and "fewer criminals released on technicalities."

F. A. Bendix, president of Bendix Mouldings, Inc., Bronx, N.Y., suggests refusing bail "in all cases involving defendants with any record."

"Release on bail is one of the rights guaranteed by our Constitution, but I believe that, if a criminal has been given advantage of one release on bail, if he is re-arrested, further release on bail should not be permitted," Albert A. Beste, vice president of fuel sales with Koenig Fuel and Supply Co., Detroit, Mich., says.

Donald H. Burton Jr., supervisor of systems evaluation for Hercules, Inc., Wilmington, Del., says, "As one of the first steps, I would suggest a minimum mandatory jail sentence for repeat violators of the law."

"Make it a federal law that commission of any crime with a gun or knife, upon conviction carries a mandatory minimum jail sentence. Much crime of all kinds is committed by people who are only big and brave enough when they have the advantage of a lethal weapon," contends R. A. Niles, manager of design and engineering for American Oil Co., Chicago, Ill.

W. J. Sagstetter, sales promotion director for Gulf Publishing Co., Houston, Tex., says, "To those who use force as a weapon, the return use of force against them is the only language they understand. Let's quit tolerating the mobs who occupy public places and destroy public property."

John Clements, field products specialist with American Standard Corp., Detroit, says we will achieve order "by making clear to everyone the law and just what it means. This is the guideline for all, with no exceptions. All must know and realize that to go beyond the law for whatever reason, you must pay the penalty."

"Only by strict enforcement of the law is order possible," A. Bruce Durkee, president of Durkee-Mower, Inc., Lynn, Mass., says. "A law unenforced is worse than no law because all laws then become candidates for breaking and all authority ceases to exist."

E. K. Goodson, vice president of Belk Brothers Co., Charlotte, N.C., says, "Let's restore in the minds of the criminally inclined fear of punishment."

Howard G. Mikeleit, a Buffalo, N.Y., dentist, expresses the views of many readers when he says, "Restore the death penalty. In 1968, there were no executions in the U.S., but thousands of decent, law-abiding citizens were killed."

William H. Henneberg Jr., general agent for Massachusetts Mutual Life Insurance Co., New Orleans, calls for a "mandatory death penalty for premeditated murder and the sale of narcotics to minors."

Others attribute the breakdown of law and order to outside influences.

"Riots and defiance of authority are stated methods of the communists to gain control of this and other countries through chaos and revolution. Why not deal with the communists in this country as the criminals they are?" asks Fred A. Rose, president of Corbett-Rose Music Co., of Alcoa, Tenn.

Many readers say crime and violence in television and movies and excessive news coverage of criminals have led to the increase in crime.

O. P. Johnson, manager of Union Carbide Corp.'s Greenville, S.C., plant, feels "the vast increase in filth, obscenity and pornography in literature, movies, etc., contributes to the permissive attitudes in our lives."

R. C. Boyd, customer service manager with Westinghouse Electric Corp., suggests, "Change the national mores." He calls for a "broad-gauge, concerted effort in all areas of public communication, TV, radio, press, advertising, government at all levels—to influence society's attitudes. Simultaneously, it requires recognition of criminal tendencies early in life and treatment as a disease, with congruent research effort."

To preserve and maintain law and order with permanence, readers call for a return to morality, respect for others and their property, and respect for the nation's laws. They look to the family unit, the educational system and our land's highest leaders to instill discipline and a respect for authority.

"Moral decline, not poverty, is the main reason for the crime increase," Estel R. Borden, owner of Borden's Motel, Mexico, Mo., says. "The percentage of crimes was lowest during the depression years of the '30's."

"Law and order will never be realized until a majority of our people really want it badly enough to live better, more honest lives and insist on exemplary lives from our leaders and elected officials," Richard A. Seggel, president of Dodge-Newark Supply Co., Inc., Newark, N.J., says.

"Our youth are not disciplined any more," Rudolf Abrams, vice president of Great American Knitting Mills, Inc., Bally, Pa., says. "A disrespect for parents breeds disrespect for the authorities in education and law enforcement."

"The nurturing of respect for authority has to begin in the home during the child's earliest years and should be reinforced by his school and religious training as he matures. Until we seriously concern ourselves with the cause of home breakdowns, the downgrading of basic religious and moral principles, other efforts to attain law and order will be futile," H. E. Roethe, an assistant manager with Oxford Paper Co., New York City, says.

A. Amarilios, president of Omega Service Parts Corp., also in New York City, suggests, "Hire school teachers with strict moral principles who respect the law and are willing to instill respect for the law in their pupils."

T. E. Henderson, superintendent of United Cotton Goods Co., Inc., Griffin, Ga., says, "Permissiveness within the home, school, college and courts has destroyed character-building principles in many of our young and we are paying for this. To restore law and order, reinstate discipline, enforce the law and make criminals pay for crime."

RESOLUTION IN SUPPORT OF JONES AMENDMENT

HON. THEODORE F. STEVENS

OF ALASKA

IN THE SENATE OF THE UNITED STATES

Monday, March 24, 1969

Mr. STEVENS. Mr. President, the National Association of Regulatory Utility Commissioners passed a resolution late last year which pertains to legislation designed to permit my State to operate a ferry-type vessel of foreign construction in U.S. coastwise service.

The resolution recognizes the problem confronting Alaska and delineates the reasons such legislation is desirable.

I ask unanimous consent that the resolution be printed in the Extensions of Remarks.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION RELATING TO PROPOSED LEGISLATION SUBMITTED TO CONGRESS BY THE STATE OF ALASKA IN 1968, DESIGNED TO PERMIT THE STATE OF ALASKA TO OPERATE A FERRY-TYPE VESSEL OF FOREIGN CONSTRUCTION IN U.S. COASTWISE SERVICE

Whereas, The major cities of Southeast Alaska including the state capitol, City of Juneau, are isolated, in that they cannot feasibly be interconnected with each other by overland highways nor can they feasibly be interconnected with other cities of the United States or Canada by overland highways; and

Whereas, The State of Alaska, in 1963, constructed the *Alaska Marine Highway* and through its Division of Marine Transportation, owns and operates large, ferry-type vessels between Seattle, Washington, and the isolated cities of Southeast Alaska and between the City of Prince Rupert, British Columbia, Canada and such cities of Southeast Alaska and between the several isolated cities of Southeast Alaska; and

Whereas, The *Alaska Marine Highway* is essential to the people of these Southeast Alaska cities as the only means of connection with continental highway systems; as a means of access and egress to this vast region of some 46,000 square miles; and as a tool for economic and industrial development particularly with relation to the tourist industry; and

Whereas, The entire cost of construction of the *Alaska Marine Highway* including the purchase of ferry vessels has been financed by the people of Alaska through the sale of State general obligation bonds; and

Whereas, The *Alaska Marine Highway* is an essential highway link to the trucking industry in intrastate, interstate and foreign commerce movement of cargo; and

Whereas, The *Alaska Marine Highway* is not a common carrier engaged in commerce within the usual sense of these terms but is in fact maintained and operated as a toll highway; nor is it operated in competition with privately owned common carriers but is only providing a means by which private

common carriers may transport cargo and passengers between points in Southeast Alaska, Prince Rupert, British Columbia, and Seattle, Washington; and

Whereas, The growth of traffic over the *Alaska Marine Highway* since its inception in 1963 has been phenomenal resulting in a critical shortage of ferry vessel capacity in August, 1967, and an annual 20 percent increase in tourist traffic was projected for 1968, 1969 and 1970, which projection is now believed to be conservative; and

Whereas, It was essential for the State of Alaska to augment its ferry fleet by the addition of at least one large ferry vessel by June, 1968; and

Whereas, No suitable ferry vessel of U.S. construction was available nor could one be constructed and available before 1970; and

Whereas, In order to remedy the emergency and adequately serve the traveling public, the State of Alaska purchased a large ferry-type vessel, the M/V Wickersham, which vessel was built in Norway, construction having been completed in December, 1967; and

Whereas, the State of Alaska cannot utilize the M/V Wichersham to the fullest of its capabilities as a ferry because of the existence of the so-called Jones Act (46 U.S.C. 289, 883) which prohibits the utilization of foreign-constructed vessels in American coastwise service, that is, picking up passengers or merchandise at one United States port and discharging the same passengers or merchandise at another United States port, but instead must limit the M/V Wickersham's operations to interconnection between Canada and the United States, which is a foreign service; and

Whereas, The restrictions of the Jones Act are causing American tourists to spend American dollars in Canada which would be spent in the United States, because tourists travel through Canada to Central Alaska, whereas, the M/V Wickersham would permit these tourists to choose to travel the *Alaska Marine Highway* for a considerable portion of this route, rather than over Canadian roads; and

Whereas, The restrictions of the Jones Act discourage tourist traffic to Southeast Alaska because tourists may not go from one Alaska community to another by means of the M/V Wickersham; and

Whereas, The Congress has from time to time passed special legislation to permit Canadian vessels to carry passengers and merchandise between United States ports, more particularly between ports in Alaska; and

Whereas, Certain of the legislation permitting Canadian vessels to engage in United States coastwise trades is still in force and effect; and

Whereas, The State of Alaska has proposed legislation, such being H.R. 17815 and H.R. 17814, 90th Congress, 2d session, the purpose of which is to enable the State to utilize the M/V Wickersham in coastwise service as a ferry, by granting special permission to the M/V Wickersham and exemption thereby or waiver from the provisions of the Jones Act.

Now, Therefore, Be It Resolved, That with respect to HR 17815 and HR 17814, 90th Congress, 2d session, and any similar legislation which will be introduced by the State of Alaska in the session of Congress which will convene in January of 1969, the National Association of Regulatory Utility Commissioners assembled in its Eighteenth Annual Convention recommends the following:

1. The Jones Act has placed an undue burden upon the *Alaska Marine Highway* demanding relief, in that, unlike other states, the State of Alaska may not freely and fully develop its highway system without restrictions, nor is the State of Alaska free to use foreign material in construction of its highway systems, as are other states, these disabilities being based upon a statute passed by Congress to remedy a condition in no way resembling the *Alaska Marine Highway* and its problems.

2. The Jones Act (46 U.S.C. 289, 883) by restricting coastwise service to vessels built in the United States has imposed an insuperable burden upon the people of the State of Alaska in developing their highway system.

3. The Jones Act was never intended to prevent one of the states of the United States from developing its highway system, and had there existed such as the *Alaska Marine Highway* in 1920, when the Jones Act was enacted, the Congress would have very likely excluded state-owned marine highway operations from its coverage.

4. The State of Alaska should be granted an exemption, exception, waiver, special permission, temporary permission, or some other special legislation should be enacted by Congress enabling the State of Alaska to utilize the M/V Wickersham for the purpose for which it was purchased, a coastwise ferry service, all of which is in the best interests of the State of Alaska, the national defense of the United States, the United States balance of payments, and in the overall long term best interests of the American shipbuilding industry, shipbuilding workers and American merchant seamen.

Adopted November 14, 1968.

A STUDENT LEADER SPEAKS OUT

HON. WILLIAM J. SCHERLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1969

Mr. SCHERLE. Mr. Speaker, the voices of responsible student leaders are beginning to be heard across this country. An example of their thinking is the following editorial by Mr. John Heerlein in the Breeze, which is the Madison, Va., College newspaper. Mr. Heerlein's excellent article on Dr. S. I. Hayakawa, the president of San Francisco State College, is recommended to my colleagues:

EDUCATOR FIGHTS BACK

Congratulations are in order for one faithful educator in California who has taken a firm stand against the ever-increasing number of agitators attempting to disrupt campuses throughout the U.S.

Dr. S. I. Hayakawa, noted educator and semanticist, and Acting President of San Francisco State College, stated before a House subcommittee meeting on February 3, that "an alliance of militant students and alienated faculty, using tactics that helped the Nazis rise to power in Germany, is dedicated to destroying society, starting with San Francisco State College."

The militant students, on strike since November 6, 1968, have demanded that the administration set up a school of ethnic studies, with absolute autonomy from the California state college system. The student demand for autonomy has certain requests, all of which are non-negotiable. They apparently want all or nothing.

Another demand of the militants is that all black students wishing admission in the fall of 1969 be accepted. However, this would do away with the present acceptance system and could be against the Civil Rights Act, resulting in a type of reverse discrimination.

The strike itself started when black students attacked the campus newspaper (6–8 Negroes were arrested during the attack for beating up the Editor). Since that time, planned violence has overtaken the campus. It was first directed toward the classrooms when students were terrorized and furniture was turned over. This was soon followed by a series of minor bombings and arson (mostly trashcan fires to disrupt classes). Finally, the violence spread to guerrilla fighting and outright student beatings.

It appears that most of the students were against mob rule and were simply seeking an education. However, those students attempting to attend classes were severely beaten by the militants.

Hayakawa has taken a firm stand, and has said he is prepared to keep the college going, even if he must continue to rely on squads of policemen every day to prevent strikers from disrupting classes. He estimated that the actual cost incurred for the use of police to be approximately $100,000 per day.

What are the students' reasons for this alleged takeover attempt? He says "the Students for Democratic Society has said it wants to destroy our society. However, they are not going to begin here."

When commenting on the news media coverage, he states: "It is very interesting to attend a noon rally and get home in time to see yourself on the six o'clock news." Although he feels that there are presently revolutionaires on campuses through the U.S. attempting to cause trouble, he says that his problems differ from those of other college campuses throughout the U.S. as each has its own unique problems.

Let us be truly thankful for such a man as Dr. Hayakawa and that we do not have the problems on our campus that he is presently facing.

EIGHTEEN-YEAR-OLDS READY TO VOTE

HON. RICHARD S. SCHWEIKER

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, March 24, 1969

Mr. SCHWEIKER. Mr. President, several weeks ago I introduced a resolution calling for a constitutional amendment to lower the voting age to 18. In my remarks at that time, I commented that I thought most Senators had come away from high schools or colleges being impressed with the high quality and intelligence of the students they met.

On Wednesday, March 12, I held a collegiate news conference, and answered questions from editors and reporters representing newspapers and radio stations at a dozen colleges in Pennsylvania and the District, and I should like to say that my observation about the high quality of our young people today was fully supported.

In a wide-ranging discussion of foreign, domestic, and military affairs, the students showed a deep concern over the problems we are facing today, and also a good understanding of what the important issues are today.

The questions they asked were every bit as intelligent and mature as any I received from adults last fall while I was campaigning throughout Pennsylvania for the Senate.

Too often, the unruly and disruptive element on campuses gets all the publicity, and it is easy to forget that these irresponsible elements are in the minority. The majority of our students today not only have considerable intellectual and moral concern about the directions our country is moving, but they are interested in bettering, not destroying

our institutions, as some of the dissidents do.

I consider it a privilege to be able to stand up and report that the responsible students have said something, such as at this collegiate news conference.

This experience is further evidence that now is the time to lower the voting age to 18, to give these responsible young people an active voice in the affairs of their country.

WATER NEEDS OUTLINED BY CONGRESSMAN JONES OF ALABAMA

HON. GEORGE H. FALLON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1969

Mr. FALLON. Mr. Speaker, the alarming downward trends in the rate of water resource development were outlined to members of the Associated General Contractors of America March 19 by our distinguished colleague from Alabama, the Honorable ROBERT E. JONES, JR.

He is widely hailed as a great authority on water resources, and he puts his knowledge to valuable use as chairman of the Subcommittee on Flood Control for the House Public Works Committee. In addition, he serves as chairman of the ad hoc Committee on Appalachia and has served as chairman of the Subcommittee on Buildings and Grounds.

His contributions to the direction and accomplishments of the Public Works Committee, and the contributions of the other subcommittee chairmen, have made my job as chairman easier and have advanced the improvement of this Nation for all the people.

His comments to the contractors, particularly in regard to the need for better evaluation of the total benefits of water developments, have great significance, and I include them in my remarks at this point:

REMARKS OF REPRESENTATIVE BOB JONES BEFORE THE ASSOCIATED GENERAL CONTRACTORS OF AMERICA HEAVY AND UTILITIES DIVISION, MARCH 19, 1969

I appreciate the opportunity to visit with you today and discuss the outlook for construction of public works facilities.

Forecasting is always dangerous. The rapidly changing economic situation of the past year emphasizes the difficulty.

There is one aspect of the outlook for new public works to which I can testify without question. That is, the outlook is not nearly so good as it should be. When compared to the present and anticipated needs, our national investment in public works facilities, especially water resource development, is woefully short.

To be specific, we have authorized 450 Corps of Engineer projects on which there has been no construction. Planning is completed in 160 of these projects, but there has been no funding.

The 1970 budget submitted by the former administration called for only 11 new construction starts and 15 new planning starts—mere peanuts compared to the backlog.

Those of you engaged in construction of Corps of Engineers projects already know of the starvation funding which seems to be coming a way of life. Budgetary restrictions have meant delays and stretch-outs for about 70 per cent of the ongoing Corps projects. The very tight federal expenditures ceiling has also prevented transfer of savings from one project to another where schedules could be advanced.

The same tight-belt situation applies in other public works areas—reclamation, building construction, highways, small watersheds.

These delays and restrictions have not promoted efficiency in pursuit of public projects.

I don't have to tell you that construction costs are rising each year. Each year a water resource project is delayed adds to the ultimate cost of that project.

In addition, the later completion dates for projects have been costly in delaying the availability of project benefits, including flood control, water supply, navigation, recreation, power, and general economic advancement. The loss in benefits due to delays in funding was estimated a year ago to amount to approximately $200 million. In addition, the delay of power on line at 12 multiple-purpose projects results in a loss estimated at $52 million in power benefits.

The level of public works activity is all the more alarming when you pause and take a look at the general trends in this country. Population is increasing, trade and commerce are up, and the gross national product is rising. During the past 10 years, federal government receipts and expenditures have doubled.

But in the public works area, direct federal outlays for civil projects have remained about constant in dollars. In view of the annually increasing costs, those dollars are buying fewer dams and reservoirs, fewer miles of roads, and fewer public benefits.

As a share of the total budget outlays, our nation's investment for the future through public works has actually declined.

While the present situation is distressing enough, the years ahead have more problems.

The very limited number of new starts funded in recent years means that the construction pipeline of the Corps is rapidly drying up as the current projects are being completed.

During the past three years, the Corps completed projects with a total cost of more than twice the value expected of new projects started in the same period.

It is estimated that without a significant increase in the number of new starts in the immediate future, the construction pipeline of the Corps will require an annual level of funding of only about $500 Million by fiscal year 1974. This compares to a current annual funding requirement of about $900 Million and represents a decrease of about 45 per cent.

The pressure to hold down new starts is felt from two flanks. We have already mentioned the budgetary limitations. The second flank involves the double-barrel issue of the interest rate used for computing the benefit-cost ratio and the criteria used in evaluating a project's benefits.

It is perfectly clear that, at this moment, interest costs for government money are up. But our water resources developments are being constructed, not for the moment, but for the future, and will be delivering benefits 50 and 100 years from now. Any attempt to chart the course of interest rates over the next 100 years would be fool-hardy, but we can look to history and see that the cost of money has changed several times during such a time period.

Also changing is the value of water and the benefits of water resource projects to the people and to the economy of the nation. This change in value is more predictable.

Until about 50 years ago, water resource development accrued benefits primarily through improvement of navigation and the increased prosperity this fostered through growth of trade and commerce.

But our nation changed. Population increased. People accumulated in the cities. New products, industry, and technology were developed. Increased population and greater consumption resulted in greater accumulations of wastes.

More people meant greater emphasis on the need for economic growth and industrial expansion to broaden employment opportunities, particularly in depressed rural areas.

Increased production and prosperity made recreation and leisure possible for more people.

The requirements for industrial and residential sites increased the value of land and marginal flood plains came into use.

Likewise, the need to feed and clothe the larger population made transportation of water to arid lands economic.

These changes multiply the importance of water resource development for water supply to cities and industry, for low-flow augmentation, for economic stimulation, for recreation, for flood control and alleviation of human misery, for agriculture and for navigation.

As the population continues to increase, these benefits of water resource projects become more significant to the people, and we must give them proper credit in evaluating projects.

Experience indicates that estimates of benefits from water resource developments in the past have been far too conservative, particularly the total benefits of a project.

We place unfair restrictions on future generations in evaluating resource projects without due regard to the increasing values which will accrue from growing population and higher levels of prosperity.

Those who delay this necessary work in the belief that it can be accomplished at less cost in some future period delude themselves.

Thus, the budgetary and criteria restrictions which hamper these direct federally financed projects are doubly dangerous. They delay the appreciation of the benefits, and they increase the ultimate cost.

The one area of federal public works endeavor which has shown substantial increase during the past 10 years has been the assistance grants to States and local governments to help construct facilities such as roads, schools, hospitals, water supply systems, and waste disposal facilities.

Here, too, problems are ahead.

As borrowing costs for States and municipalities in the past six months have soared to the highest levels in a generation, more than half a billion dollars in tax-exempt bond issues have been postponed or canceled altogether.

Statutory interest-rate ceilings have cut some states and localities out of bond revenue sources. The unusually high cost of money has caused others to re-evaluate, postpone, or cancel projects where local participation is involved.

There is no indication that credit conditions will ease this year.

The difficulty in securing local matching funds for participating programs will have adverse effect on many projects—hospitals and health facilities, school and college construction, waste treatment facilities and water supply projects, streets, and highways.

Meaningful increases in Federal assistance in this area are no where in sight.

Instead, we hear today the same arguments which have been used to oppose public works projects throughout our nation's history.

You may remember the forecasts of doom concerning the construction of the St. Lawrence Seaway in the 1950's. Listen to the opposition of Rep. Cleveland Bailey of West Virginia: "The cost of the proposed St. Lawrence Waterway will be added to the United States' national debt now near the legal ceiling."

A Pennsylvania Member believed: "There is no genuine merit in this proposal. It is not

justified from a navigational standpoint; it is not justified from the standpoint of national defense."

Rep. Thomas J. Lane of Massachusetts imagined other problems: "The proposed St. Lawrence Seaway would detour business away from our ports and our railroads with side effects that would compound our present difficulties. It is estimated that 30 per cent of Boston's foreign trade would be lost to the Seaway.

"Similar losses would be suffered by all other Atlantic and Gulf Ports and traffic along the Mississippi will diminish."

Similar arguments were used before that, when the Rivers and Harbors bill was amended to provide for development of the Bonneville Dam on the mighty Columbia River in the northwest. Listen to what then Rep. Frank Carlson of Kansas said: "It is a power project to put water on this arid land. There is no sale nor need for additional power in this section."

Referring to the new land which would be opened to farming in the northwest: "How can the farmers of the middle west compete with this kind of proposition?"

Earlier, do you know what they were saying in opposition to the construction of the Tennessee Valley Authority Project in 1933? Here are some quotes from the Congressional debates:

"How far can the government run into public debt without impairing its credit and bringing about a great crash? Extraordinary borrowing would be at this time a calamity.

"If you pass this bill . . . you will destroy the Commonwealth & Southern Company, which is a holding company, and make it impossible to ever pay dividends to thousands that own stock in that and allied companies.

"The existing power company in that part of the country is able to produce more power than can be consumed by any business development in the next 10 years." That was Rep. Harry Clay Ransley of Pennsylvania.

Consider the concern of Rep. Joe Martin of Massachusetts: "The trusting people of Tennessee and Alabama hope that out of this government venture in the realm of business will rise a new industrial empire. A magnificent mirage. Lost sight of is the fact that industrial expansion in the United States is over for a few years at least . . . I think I can accurately predict and no one in this generation will see materialize the industrial empire dream of the Tennessee Valley."

Rep. Carl Edgar Mapes of Michigan said: "This is no time to start expenditures of this kind when we are trying to reduce the expenses of the country, when everybody is in such distress. It is not a sound investment. It is economically unsound from the standpoint of both navigation and the development of power."

Rep. Daniel Reed of New York believed: "This is not retrenchment. It is wild, unrestrained and inexcusable extravagance."

A former House Member now in the Senate said: "I cite to you that nothing definite or conclusive has been offered to show that there is any particular need at this time . . . The development of power in that particular locality of the nation, or of fertilizer, for that matter, can be of no general good, as I see it."

If we listen to the opponents of public works, the time to start will always be in the future; whether depression or prosperity, the economic conditions will never be auspicious; the public debt will never be low enough to justify an increase; taxes will always be too high to merit investment; other needs will always be too pressing and demanding; the facilities will never be justifiable; the imaginary and false fears of local economic disaster will always lurk ahead.

I submit that our nation's entire experience with public works improvements proves these opponents wrong.

Our nation's investment in development of resources has paid dividends to the people many times over in greater general prosperity, growth, and enjoyment. This investment has been the very keystone of our unequalled level of economic achievement.

Other problems—the cities, poverty, unemployment, education, and training—cry out for immediate attention. These are real and must be serviced.

But direction of our efforts toward these problems will be marked with frustration, and the problems themselves will be compounded in the future unless adequate attention is given to the basic needs for resource development and construction of needed public facilities.

In fact, many of the problems which seem so urgent today are related to our past neglect of resource development.

I have confidence in our country, our great economic strength and our ability to move forward.

We cannot defer vital public improvements and hope to move forward at an acceptable pace for future growth, security, and well-being.

Most of these projects require years of planning before they become a reality. When some crisis makes the need apparent to all, it is generally too late.

If we don't start making plans and move forward making those plans a reality, this nation is going to be impoverished in such areas as water resources shortly after the year 2000 when our population has doubled to more than 400 million.

That's 30 years from now—a short span.

Yet at the present rate, we are not even keeping up with the backlog of public works needs. We are certainly not building for future needs.

Present plans accommodate only present requirements and that, in a most meager fashion.

This meager servicing of resource development in the sacred name of economy is going to prove very costly in the long run.

Repairs for lack of proper planning have been our most expensive endeavors in public projects. Repairs cannot be made without extraordinary expense, and inconvenience.

Repairs or rehabilitations will not give us the comprehensive and total beneficial use of our water and other resources.

As an example, the Ohio River was initially developed under the Flood Control Act of 1909 with a principal aim for the navigation potentials.

The Act ignored all other aspects of water resources development and today we are trying to rehabilitate this enormous and valuable stream. But due to the industrialization and urbanization in the flood plains of the river, no scheme can now be developed to give us all the benefits of the resources of this stream.

This primary lesson should be so impressive that we dare not continue these gross mistakes and miscalculations in our future planning.

Failure to plan and develop for all the total aspects of water use penalizes future generations and forecloses options which should remain viable.

Our nation will respond to the need for development of such resources as water.

If that response is delayed until a crisis provokes action, the solution will be expensive if it is obtainable at that late date.

As a group which has a strong interest in seeing America progress, I urge you to join in helping awaken the people to the needs for a national goal of proper, orderly, and adequate development for the future.

We must hasten to do this work.

We lose distance each day this work remains undone.

OPPOSITION TO NOMINATION OF DR. JAMES E. ALLEN

HON. JAMES B. ALLEN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Monday, March 24, 1969

Mr. ALLEN. Mr. President, strong objections have been voiced in Alabama and from throughout the South to the choice of Dr. James E. Allen to fill two powerful positions in the present administration. Dr. Allen is scheduled to assume the duties of the Office of U.S. Commissioner of Education and also the Office of Assistant Secretary of Health, Education, and Welfare. The reasons for opposition by responsible leadership in the South are clearly shown in an article published recently in Human Events, and reproduced on the editorial page of the highly respected and influential Dothan Eagle, Dothan, Ala.

Mr. President, I believe that the facts, inferences, and conclusions expressed in the article are highly relevant to the appointment of Dr. Allen. Accordingly, I commend the article to the thoughtful consideration of Members of the Senate and ask unanimous consent that it be printed in the RECORD as an extension of my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"MR. BUSING" COMES TO WASHINGTON

Republican politicos were intensely unhappy last week with the naming of the controversial Dr. James E. Allen—a zealous school integrationist—to two powerful positions in the Department of Health, Education, and Welfare. The startling selection of New York state's commissioner of education, who will assume both the jobs of assistant secretary of HEW and U.S. Commissioner of Education in the Nixon Administration, is considered a stunning setback by GOP strategists who realize the party must move southward to forge a permanent Republican majority. Yet the strange choice of Allen—made by Nixon's supposedly good friend Robert Finch—promises to wreak havoc with that plan.

"If anything can regalvanize the Wallace movement," noted one Southern Republican last week, "it is the appointment of such persons as Allen." But Allen's policies—if implemented on a national level—are bound to trigger an adverse reaction to the Nixon Administration not only in the South but in almost all other sections of the country as well.

The czar of New York's primary and secondary education system for 14 years, Allen has become the champion in inflexible and irresponsible integrationist policies, policies which Nixon repeatedly—and vigorously—opposed during the campaign. He is, in fact, "Mr. Busing" himself. Moreover, in New York's decentralization struggle, Allen allied himself with the racial militants, both black and white.

What Allen will probably choose to accomplish in his new post can be gauged from his New York performance in the past six years. On June 14, 1963, he issued a directive to every school district in New York demanding the elimination of "racially imbalanced" school as "one having 50 per cent or more Negroes enrolled." Since this incredible edict, Allen has been disrupting the state's local system by energetically trying

to end de facto segregation, closing down perfectly good schools if they are "racially imbalanced" and instituting a massive busing program . . .

Upon being formally nominated to his new position last week, Allen did nothing to suggest a softening of his previous positions. He even went so far as to stress that he was "fundamentally" in agreement with the past Commissioner of Education, Harold Howe II, whose plans to achieve compulsory racial and economic integration in the nation's schools included massive busing, educational parks and the virtual elimination of neighborhood schools.

Allen's love for Howe was not exactly a surprise, however. Indeed, Allen's chief aide in implementing his own compulsory integrationist policies was one Theron Johnson, who became a special assistant to Howe in 1966. Also an advocate of busing and educational parks, Johnson plans to stay in his $25,000-a-year job to serve Allen once again.

Yet Allen's attitude on integration is not all that is disturbing. In the late 1950s, Allen put pressure on the city board of education to help eliminate an investigation into Communist teachers headed by assistant corporation counsel Saul Moskoff. Allen, further, is considered almost as responsible as John Lindsay for permitting racial militants to take over the schools in the Ocean Hill-Brownsville area.

The Allen selection, then, bodes ill for the Nixon Administration. Unless Allen can be hamstrung, HEW will be a far more activist department than Nixon—or its new secretary Robert Finch—had led many to believe.

HON. GEORGE W. ANDREWS' 25 YEARS OF SERVICE

HON. ROBERT E. JONES

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 20, 1969

Mr. JONES of Alabama. Mr. Speaker, I wish to join in the tribute to the dean of the Alabama delegation, the Honorable GEORGE W. ANDREWS, who has completed 25 years of service in this House.

Our distinguished colleague has the unusual honor of having been elected to the Congress with a minimum of personal effort on his part. At the time of his election, he was serving as an officer in the U.S. Navy during World War II. He was released from active duty to take his seat in Congress on March 14, 1944, and has served continuously since that time.

The relative ease of his initial election was a credit to his reputation as a hard worker. He earned this reputation while serving as circuit solicitor for the Third Judicial Circuit of Alabama from 1931 to 1943 when he entered the Navy.

He has maintained this reputation for hard work during the past 25 years as a Member of this House.

The Honorable GEORGE W. ANDREWS is noted for his conscientious and dedicated service to the people of his district and of this Nation. The people of every section of this land should be grateful to him for his attention to the problems of national defense as a member of the Appropriations Committee.

We, in the Congress, owe him a special debt of gratitude for his skills and adeptness in handling appropriations for the Congress as chairman of the Legislative Subcommittee of the Appropriations Committee.

As a reflection of his longtime interest in the building of this great Nation, he has recently assumed responsibilities on the Public Works Subcommittee of the Appropriations Committee. From this important assignment he will be able to continue to exercise his great interest in the public endeavors which form the very backbone of our economy.

Our colleague's reputation for close attention to the needs of the people of the district he represents is evidenced by his unusually handsome victories in those few occasions when he has had opposition.

I am confident that the people of the Third District of Alabama will return GEORGE ANDREWS to this House for many years to come.

As I join in commemorating his 25th year of service, I wish him and his lovely wife, Elizabeth, continued good health and happiness in the many years of service which lie ahead.

A PROPER MEMORIAL

HON. PAUL J. FANNIN

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Monday, March 24, 1969

Mr. FANNIN. Mr. President, it has disturbed me to hear of the recent statements of Rev. Ralph Abernathy, mayor of the problem city set up on the Mall in Washington last year. Mr. Abernathy is reported to have said that he expects to see demonstrations and disruptions when Negroes observe the first anniversary of the death of Martin Luther King.

It appears to me that this is entirely the wrong approach. I cannot see that constructive results can be accomplished if the negative actions are followed.

The Phoenix Gazette has published an excellent editorial which sets forth a positive plan of action for those who would properly memorialize Dr. King. To my mind it is a completely appropriate and fitting tribute to a man who was a leader to so many. I quote the last two sentences from the editorial:

The Negro has no monopoly on the dreams of Dr. Martin Luther King; all men of conscience share his hopes.

But dreams soon mock a man, and hopes become hollow, if he stands and complains when he could be moving and creating.

Mr. President, the title of the editorial is: "Don't Dream on April 4—Do." I ask unanimous consent that it be printed in the Extensions of Remarks.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DON'T DREAM ON APRIL 4—DO

Dr. Martin Luther King's dreams for his race will suffer a setback on April 4, the first anniversary of his death, if Negroes observe the day as the Rev. Ralph Abernathy thinks they should.

"I expect to see boycotts, school walkouts, work stoppages, peace demonstrations, student protests, rent strikes, marches against hunger and many other forms of non-violent action," the leader of the Southern Christian Leadership Conference said.

And what will any of those negative actions bring other than a negative response?

If you are a Negro who wants to honor the memory of Dr. King on April 4—don't dream—do.

Don't stage a school walkout. Walk in. And wring every new drop of knowledge out of that day that your brain can absorb.

Instead of a work stoppage, work to your limit. Show your fellowman what your mind and hands are capable of performing.

Rather than holding a peace demonstration, demonstrate that you are a man of peace.

Don't march against hunger—feed someone.

Instead of a rent strike, strike out for that day when you can burn the mortgage on your home.

The Negro has no monopoly on the dreams of Dr. Martin Luther King; all men of conscience share his hopes.

But dreams soon mock a man, and hopes become hollow, if he stands and complains when he could be moving and creating.

JUST WHO RUNS THE OFFICE OF THE CHIEF OF CHAPLAINS?

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1969

Mr. BRAY. Mr. Speaker, at the time of the U.S. Supreme Court's school prayer decision, the point was made that one of several possible logical extensions of such a ruling would be banning or at the very least sharply restricting activities of Armed Forces chaplains.

The Supreme Court has not moved in this direction, but a private, nongovernmental organization has. It has come to my attention that the American Civil Liberties Union, finding fault with certain phrases in instruction manuals for the military's character guidance program, has pressured the Pentagon to make the manuals conform to what the ACLU deems fitting and proper.

The character guidance program, for all enlisted military personnel, is customarily conducted by chaplains who use material prepared by the Office of the Chief of Chaplains. Materials issued to those who conduct the course states, in part, that aim of the program is "to instill into all the members of the Army a sense of individual moral responsibility and moral principles that sustain the philisophy of American freedom. That philosophy regards man as a creature of God. As such, every soldier is responsible and accountable to his Creator for the way he performs his civic and military duty."

I cannot remotely understand what anyone finds offensive in this concept. The term "Creator" means many things to many people, and all but a very tiny minority, no matter what their faith, do acknowledge a "Creator" in some form. And, I might add, I was also under the impression that practically everyone, believer or atheist, admitted existence of individual moral responsibility in varying degrees.

I understand the ACLU's original complaint was made about a year ago, and that recently the ACLU has been assured by the Pentagon that "we are revising all the materials in question to eliminate passages with religious connotations."

It should be noted here that Postmaster General Winton M. Blount takes a somewhat different view about the worth of "passages with religious connotations." It was announced in late February that he had ordered revision of the Apollo 8 commemorative stamp to include the words "In the beginning God . . ." which were spoken by Lt. Col. William A. Anders when he read from the Book of Genesis during the historic flight orbiting the moon. The Postmaster General stated that it seemed eminently appropriate that this introductory phrase should appear on the stamp that commemorates one of the most significant and dramatic events of our time.

I imagine the ACLU will protest this, as well, but the ACLU is not the Supreme Court. Furthermore, I do not think the ACLU or any other organization, for that matter, is especially qualified to arbitrarily prescribe what goes into military troop guidance courses. It seems this incident is a prime example of outright minority dictation, and if the ACLU can do it today, another organization can do it somewhere else tomorrow.

I am making an official request for an explanation of this incident. Aside from the fact that I see no reason for the Office of the Chief of Chaplains to knuckle under to what seems is little more than unjustified meddling on the part of the ACLU, I believe it set an extremely poor precedent and I would like to know just what factors were taken into consideration in the Pentagon's eventual decision.

THE TRAGEDY COME HOME

HON. FRANK CHURCH

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Monday, March 24, 1969

Mr. CHURCH. Mr. President, it was with deep sorrow that I recently read in the Blackfoot News, one of Idaho's finest newspapers, an editorial account of the death in Vietnam of a young Idahoan, Pvt. Douglas Rowe.

Written by the News' publisher, Drury R. Brown, the editorial speaks for itself. It is a striking indictment of the folly we pursue in Vietnam. Because it places the tragedy there in the perspective of one soldier and his family, this account deserves to be widely read. Accordingly, Mr. President, I ask that the editorial be printed in the Extensions of Remarks.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PVT. DOUGLAS ROWE DIES

Word was received by his parents yesterday that on March 9, 1969, Private First Class Douglas Noel Rowe died in battle in Vietnam. The notification did not reveal the place of his death. Neither was it revealed when his body may be returned to Idaho.

Private Rowe was born Nov. 13, 1946 in Rupert, Idaho. He was the son of Mr. and Mrs. Noel F. Rowe, 706 South Fourth Avenue, Pocatello, Idaho. He is survived by his parents; by two brothers; Alvin Rowe, Washington, D.C., and Airman First Class Steven Rowe, now stationed in Thailand, and by a sister, Elaine, Pocatello.

Private Rowe attended school in Blackfoot, graduating from Blackfoot High School with the Class of 1965, and thereafter attended Idaho State University, Pocatello, for two years.

He was a member of The First Baptist Church of Blackfoot. Time of funeral services cannot be established until the family has been notified by the Army when his body will be returned. But it is announced by his parents that the funeral will be held in The First Baptist Church of Pocatello and burial in the Blackfoot City Cemetery.

This is the sort of simple war statistic that has appeared thousands of times in American newspapers since the beginning of our involvement in the undeclared war in Vietnam.

But Doug Rowe is much more than a war statistic. Doug is the little boy grown to man. He is the son and brother who, through his entire lifetime, was a source of extreme pride to his family. He was intelligent and fun-loving yet always unassuming. He was clean-cut and fastidious. He was the thoughtful and dependable boy that carried a newspaper route. In so doing, he won the affection and esteem of the people to whom he delivered the newspaper. He was the young man who for four years worked part time in the office of the Blackfoot News and who was mature and competent enough in his last summer of employment to act as its circulation manager.

He was the talented guitar player who with Nancy Edison, Julie Hutchings and Joe Evans, made up one of the most entertaining and delightful singing groups ever formed in Blackfoot High School.

Doug Rowe became one of the group of young American men who were unable to plan their careers because conscription to military service was hanging over their heads. Doug thought the war in Vietnam was wrong—that it was a waste of the nation's energy and resources—he believed that most of the people in the little nation of Vietnam wished that we had not come there and that we would leave—that it was immoral for us to be fighting there.

With such thoughts in mind, perhaps it was natural that Doug found it impossible to finish his college work while waiting for the draft to reach him. He dropped out of school and, while waiting, he took a job selling encyclopedias in Torrance, Calif. He reported to his family that he had met with startling success in the field of selling—that such would be the career he would pursue when his service to his country was completed.

He received his draft call in August, 1968.

In one of the last letters received by his family from Doug in Vietnam, he wrote that he had just returned from a 10-day military operation in the jungle. During that period there had been no time to bathe, shave nor change clothing.

Doug's family had every reason to be proud of him in life. They may find little solace in the assurance of military authorities that their son and brother died in Vietnam as a hero, nor in the flying of the flag over Blackfoot High School at halfmast the day that he will be buried. We can grieve with them as we remember there was every reason to think he could have made a very real contribution to his world.

There are many of us who knew Doug Rowe who believe, as he did, that the war in Vietnam is a tragic mistake into which the nation was dragged by an ill-conceived foreign policy.

Perhaps the greatest tribute such of us could pay to his memory is to demand without ceasing that the old men who make wars in which young men fight and die shall cease dragging their feet in the pursuit of the peace to which they say they are committed, and that saving the lives of both American and Asian boys has a much higher priority than saving the faces of political and military leaders.

A STATEMENT IN SUPPORT OF TVA

HON. ROBERT E. JONES

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1969

Mr. JONES of Alabama. Mr. Speaker, my attention has recently been drawn to a series of articles which appeared in the Ford Lauderdale, Fla., News and criticized many aspects of the Tennessee Valley Authority program. One of the basic complaints in the article is that TVA owns 4,800 acres of land in Florida. The article complains that this land is held for phosphate reserves although "the TVA was created in 1933 to provide electricity to the valley."

This statement, which alludes to TVA's important assignment of supplying electric power to the Tennessee Valley area, shows a complete lack of understanding by the author of the purposes for which Congress created TVA. The author's additional statements indicating that TVA somehow intruded itself into the fertilizer field clearly show the author's ignorance of the origins of TVA. It must be remembered that part of the reason for establishing TVA was to utilize an idle nitrate plant that had been started during World War I. If the author had taken time to read President Roosevelt's message to Congress asking that TVA be created he would have found:

It is clear that the Muscle Shoals development is but a small part of the potential public usefulness of the entire Tennessee River. Such use, if envisioned in its entirety, transcends mere power development: it enters the wide fields of flood control, soil erosion, afforestation, elimination from agricultural use of marginal lands, and distribution and diversification of industry. In short, this power development of war days leads logically to national planning for a complete river watershed involving many States and the future lives and welfare of millions. It touches and gives life to all forms of human concerns.

If the author had taken the time to read the TVA Act he would have found that section 5, which contains 14 subsections, is mainly devoted to explaining TVA's role in fertilizer development and research. In the face of references how can anyone honestly imply that TVA's role in fertilizer development and research was not one of the primary reasons for which it was formed?

Before I go on to show what TVA has accomplished in this area, let me point out that Congress understood that the same plants that could aid American farmers in time of peace, through fertilizer research and development, could aid its soldiers in time of war by producing munitions. Thus, section 5(j) and section 20 of the TVA Act provide for the use of these facilities for war purposes when needed.

How has TVA used these powers given to it? Aside from the tremendous job done in the Tennessee Valley area, it has worked to aid American agriculture with

farmers, colleges, and fertilizer distributors and manufacturers in all parts of the United States. Its impact on the fertilizer industry is shown by the fact that 514 licenses, issued on a nonexclusive royalty-free basis, have been granted to 300 companies for use in plants in 39 States. These licenses make the technology represented by TVA patents freely available to the fertilizer industry in order to promote low fertilizer costs for the farmer.

Just as TVA's licensing takes its technology to industry, its test-demonstration program takes its research to the farmer through demonstration programs conducted in cooperation with State universities. Last year, thousands of farmers in 35 States gained knowledge and found solutions to problems through these programs.

To round out its approach to the farmer TVA reaches the fertilizer dealer by the distributor-demonstration program which was active in 41 States last year. Through this program the fertilizer dealer, often a small businessman, is given access to knowledge of new products to enable him to serve better the farmers in his area.

This, in brief, outlines the importance of the TVA fertilizer program. But, before I return to those 4,800 acres that the Fort Lauderdale News is worried about I would like to mention the role of TVA in national defense. I have seen favorable comments in the past on TVA's ability to supply munitions during World War II and the Korean war. But few realize that throughout the Vietnam war TVA has been the sole supplier of phosphorus to the Army.

Now for the 4,800 acres of land. In developing new process and fertilizer products that can be patented and licensed to industry—TVA needs phosphate. In producing fertilizers for use in fertilizer and distributor demonstration programs—TVA needs phosphate. And in producing phosphorus for the Army—TVA needs phosphate.

Because of this need TVA acquired those 4,800 acres in Florida as a phosphate reserve. The reserve will assure TVA the future supplies of the high-grade Florida phosphate it needs for the nationally important programs it conducts. Until phosphate is needed or until it appears that other arrangements should be made to assure phosphate for the TVA program, the mineral should not be mined and the land should remain in TVA's custody. In the meantime what should TVA do with the property?

The Fort Lauderdale News complains about the 3,000-acre timber management program and the forest tree fertilization program being conducted on this land. I wonder if the University of Florida, which assisted TVA in the timber management program and joined in a forest fertilization symposium with TVA and the U.S. Forest Service, would complain about these activities. I also wonder if the residents of Florida who use the 4,800 acres in TVA's custody for hunting and fishing and other recreational activities complain about TVA's management of this land.

Such uses are not a cause for complaint but for congratulations. Instead of letting this asset lie fallow until such time as it is needed, TVA chose to put it to interim uses that serve the public. This is the essence of good stewardship.

Furthermore, if changed circumstances indicate the reserves should be disposed of, these interim uses will have enhanced the value of the land for other purposes.

I could point out other areas where the Fort Lauderdale News exhibits ignorance of TVA, but I think just one more point is sufficient. The Fort Lauderdale News article states, with disapproval, that TVA's fertilizer research, development, and production plant at Muscle Shoals, Ala., operates at a $10 million-a-year loss. First, it should be pointed out that Congress did not intend this program, which is heavily involved in research, to finance itself. Second, the $10 million mentioned result in benefits far exceeding costs to the taxpayer.

The processes and equipment that are being used to produce most of the granular mixed fertilizers made in the United States today were developed by this program. This program has been a leading factor in a one-third reduction since 1950 of the costs of fertilizer to the American farmer. This program also has provided capacity to produce needed defense material so that private industry can continue following peaceful pursuits.

With such results, these funds do not represent a net loss, but are of the truly foresighted investments this country has made.

BICENTENNIAL OF THE AMERICAN REVOLUTION

HON. ERNEST F. HOLLINGS

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, March 24, 1969

Mr. HOLLINGS. Mr. President, as we approach the bicentennial of the American Revolution, it is important that we understand the causes of that event and the foundations of American independence. A significant contribution to that objective is being made in my home State of South Carolina.

Volume 1 of a 12-volume series of "The Papers of Henry Laurens" has just been published. This series will contain pertinent material about a crucial period in our history. Through the life of Henry Laurens—wealthy colonial merchant and planter, vice president of the State of South Carolina, Member and President of the Continental Congress—succeeding John Hancock—for 15 months prisoner of the British in the Tower of London charged with high treason, and one of the peace commissioners who negotiated the Treaty of Paris of 1783 in which Great Britain recognized the independence of the United States—we are able to gain great insight of the colonial period of American history.

Joint sponsors of this project are the South Carolina Historical Society of Charleston, and the National Historical Publications Commission with the cooperation of the University of South Carolina. Two native South Carolinians are editing the papers: Philip M. Hamer, editor, retired Executive Director of the U.S. National Historical Publications Commission and George C. Rogers, Jr., associate editor, professor of history at the University of South Carolina.

SUPPORT OF LEGISLATION DESIGNED TO HELP PREVENT THE DISTRIBUTION OF PORNOGRAPHIC LITERATURE AND ADVERTISEMENTS TO MINORS

HON. CHARLOTTE T. REID

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1969

Mrs. REID of Illinois. Mr. Speaker, last year alone the Post Office Department received over 165,000 formal complaints from recipients of unsolicited offensive mailings to both adults and minors, and the volume seems to be growing each month. A number of my constituents have sent me samples of objectionable advertisements they have received, and people everywhere express concern that Congress must act.

Today, I am introducing two bills which, if passed by the Congress, will provide postal authorities with decisive powers to crack down on dealers in pornography—particularly those who increasingly are using the mails as a pipeline for the unconscionable flow of smut and obscenity to minors.

The first bill would prohibit mail order sales of obscene materials to school-age children, and it would also make the unsolicited mailing of "hard core" pornography—or offers to sell "hard core" pornography—to any family with children under the age of 16, a Federal crime punishable by a fine and jail sentence.

The second bill would require the written consent of each person whose name appears on a list sold or exchanged by mailing list brokers. This is aimed at those persons who gather lists of names from high school annuals and similar sources and sell them to distributors of obscene material.

The Supreme Court held just last year that the sale of pornography to minors may be much more restricted than to adults. In *Ginsberg* v. *New York* (390 U.S. 629), the Court held that a New York statute which prohibited the sale of pornographic materials to persons under 17 years of age was constitutional. In this decision, the Court recognized the special responsibility of parents in rearing their children.

I realize that Public Law 90–206 enacted by the last Congress has provided parents with some degree of protection. Under this statute any post office patron receiving material which he considers objectionable can request the post office to order his name to be taken off the sender's mailing list. This is but a small step, however, and does not really meet the problem since the material must be in the home before the recipient can object. Apart from the substantial possibility that the mailing will have found its way into children's hands, the act provides

no deterrent to unsolicited mailings by smut merchants. Furthermore, it places the considerable burden of enforcement on the innocent recipients and post office authorities.

Under my bill, if a person is convicted of sending offensive material to minors he would be subject to a sentence of $5,000 fine and 5 years imprisonment for the first offense, and $10,000 fine and 10 years imprisonment for subsequent offenses. While this may seem a rather severe penalty, we need to have a clear deterrent to assure that our youth are protected from degenerate matter. The Supreme Court has very specifically set out an area in which legislation is valid, and, in my opinion, necessary. I would urge the House to move swiftly in considering this legislation.

HISTORY OF ZION EVANGELICAL AND REFORMED CHURCH OF NANTICOKE, PA.

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1969

Mr. FLOOD. Mr. Speaker, the Zion Evangelical and Reformed Church in the city of Nanticoke, Pa., will observe its 80th anniversary next month. Arrangements are being made for the congregation to duly note the anniversary with appropriate ceremonies. The committee in charge of the anniversary program has brought together a detailed and informative history of the church and as part of my remarks today, Mr. Speaker, I herewith submit the aforementioned history which I am sure many people will find most interesting:

HISTORY OF ZION CHURCH

According to the minutes Zion's Reformed Church of Nanticoke was organized as a separate congregation on the 10th of April 1889. Previous to this, the people who went into this organization and the people comprising St. John's Lutheran Church worship in the church on State St. which they jointly built and owned. They were served by Dr. Levan from Wilkes-Barre under the care of Classis. This amicable relation, however, did not exist very long. A Lutheran minister came upon the scene and caused a disturbance in the congregation. As a result of this, the church was closed against Rev. Levan and his people. Litigation was entered into by the classis to secure the property but thru mistakes and misunderstanding they failed. Having thus secured permanent possession of the church property, the Lutheran faction in the congregation called a Lutheran minister and organized St. John's Lutheran Church. Those who differed and did not wish to enter into this compact withdrew and organized themselves into a separate congregation calling themselves "The Evangelical Zion Reformed Church of Nanticoke."

They sacrificed their interest in the church property and were forced to begin empty handed but this did not discourage them. They rented a hall in which they worshipped for some time until they could arrange either to build or buy a church of their own. In the course of time this was accomplished thru the indefatigable labors of Rev. Glantz who became the first pastor, and his little flock of faithful men and women. They secured the present property and church home from the Welsh Congregation which was then splitting into different and differing sections and was abandoning the old site for new ones. There seemed to be a difference of opinion in those days as to the best course to pursue: to build new in some other sections of the city or to buy the present church with all its improvements and its splendid location at a figure which would seem now ridiculously low. This question is now no longer debated but is considered settled. In convenience, in beauty of location, and the increase in the value of the property, nothing better could have been secured. The property was bought for three thousand dollars, eleven hundred of which was paid during the ministry of Mr. Glantz. This brother was permitted to labor but a short time, less than four years but during this brief period of his ministry much was done in foundation work for future success. After this short period of successful toil and patient endurance this brother was called up higher to enjoy the rest of the saints. Rev. S. C. Hechel, who had previously given a helping hand now took care of the congregation until Rev. Ruloff was called to become its pastor. Rev. Ruloff's pastorate extended over a period of about ten years. Many things were adjusted and strengthened during this period. Seven hundred (700) dollars of debt was paid and some minor repairs made to the property. In him the congregation had a strong and fearless preacher and a guide of many good qualities. His pastorate came to an end in 1903 and he was immediately succeeded by the present pastor. The congregation at this time had a mortgage against its property of $1300. The peoples energy in the good work had slackened and the church needed repairs badly. But the people revived in interest and by united effort much has been accomplished during the last six or seven years. The mortgage on the property was paid. Repairs to the church and its surrounding such as shingling, painting, sewerage connections, and paving were made costing a total of about 600 dollars and the present inside improvements costing somewhat over a thousand dollars. The grand total raised for debt and improvements alone amounts to more than 3000 dollars. This money has come out of the pockets of our own people and has been secured not by a process of begging or by a constant round of socials or by questionable means of any kind but mostly by systematic giving and receiving. While this amount might be considered small if paid by a large and wealthy congregation it means sacrifice where given by a small congregation of comparatively poor people.

If giving as some one has said is a true index of the spirituality of a people we believe there has been improvements along this line also. "A good tree" the master says, "bringeth forth good fruit" and the reverse. We doubt not but that the life of Jesus and his power and mission to save as presented by the ministers who have served this charge has come to fruition in the acts, and deeds of the people.

We hope at least that these improvements are the outcome of a genuine Christian spirit.

The painting and papering has been paid for by the congregation. The carpet was paid for by the Frau Fraun and the magnificent lights by the young people of the church. One of the hopeful signs of the future progress is the interest our young people have taken of late in the good cause.

We hope that these lights in which they have taken such an interest may be to them an emblem of the light of God's truth. We hope and pray, also that what has been accomplished in the past may be but a prelude of larger and better things to come and that wiser minds and purer hands join in chronicling the future history of this church and that still nobler things may crown its pages.

(The above is an extract from an address delivered by the Rev. W. H. Herbert at the reopening services of Zion's Church, November 27, 1910.)

After extensive repairing and improvements of both interior and exterior of Zion's Reformed Church, which cost over Three Thousand Dollars ($3000). It was rededicated to the Tribune God on Sunday, Dec. 5th, 1920 by the pastor, Rev. W. H. Warner, in the presence of an interesting audience. The repairs of the interior consisted of the seats being repainted and varnished. Memorial windows were put in, a new ceiling of metal, which was painted. Also a new door to the auditorium. The improvements to the exterior consisted of having the church painted, new spouting all around the church, plumbing, and other minor repairs. The Ladies Aid Society paid one fourth of the entire expenses of the church all of which was done cheerfully.

It is now a beautiful house of worship practically a new church, equal to any Protestant church in the town.

One of which its members should feel proud. While the improvements were being made to the auditorium of the Church, services were held in the basement.

In the spring of 1921 A.D. the church property was further beautified by a nice stone wall extending over 300 feet in front of the church along the street at a cost of over $800.

On October 15th, 1921, one of the latest improved International furnaces was placed in the basement of the church which was paid by the Ladies Aid Society, and has given much comfort and service.

Later in the season of 1921 a railing was placed on either side of the stone steps leading up to the church, to assist the old people in going up and down. And in the early spring of 1922 the Young Peoples' Society presented the church with collection plates, also an individual Communion Service, also a filler and they were dedicated on Easter Sunday. The insurance has also been paid for 3 years until April 1925.

In May 1922 the basement was thoroughly renovated: painted, papered, and repaired. These are the improvements made during the Pastorate of the Rev. W. H. Warner. Near the close of his pastorate, Wyoming Classics of the Eastern Synod met in the 35 annual session in Zion Reformed Church on Monday, May 22nd to 24 inclusive.

In a response to a unanimous call from Zion Reformed Church, the undersigned began his pastorate, Nov. 1, 1922 and terminated it June 1, 1926.

Although not all our hopes were realized, in some things we were sadly disappointed, yet it is gratifying to know that in no other period of the same length of time in the history of the congregation were so many telling things achieved and so much money raised for various purposes.

The outstanding achievement was the building and paying for a much needed parsonage. The contract price of the parsonage was seven thousand five hundred dollars.

The final payment of the parsonage was celebrated March 13, 1925, and was largely attended, the Sunday school, Young Peoples Society, and Ladies Aid Society, uniting with the congregation in making the occasion a great success.

First religious service was conducted in the main auditorium of the church. At this service the paid notes were burned.

After this service a banquet was given in the basement of the church. Representatives of the congregation and the auxiliaries of the church delivered addresses.

In the arrangement of the program for the happy occasion committees of the Young Peoples Society and the Ladies Aid Society assisted. Other improvements were putting a new roof on the church and rebuilding the chimneys, and leveling and improving the rear yard.

Following are some of the things purchased by the congregation or auxiliaries of the church: pulpit light, new church hymnals, new song books for the Sunday school, chairs for primary department of Sunday school, piano for basement of the church, english pulpit Bible, etc. Also a range, window shades, light fixtures, and linoleum for the parsonage. We regret, however, that we cannot report so favorably concerning things spiritual. During the present pastorate, a Woman's Missionary Society was organized, but due to a lack of interest, and opposition the Society ceased to exist. During the latter part of the present pastorate, weekly prayer services were conducted, which were the means of blessing and spiritual strengthening for those who attended. We believe that the great need of this congregation is the stressing of the importance of the spiritual aide—real, true, christian living.

As we conclude our pastorate it is gratifying to know that we have endeavored to lead believers to the attainment of a higher standard of christian living and to point sinners into the Lamb of God that taketh away the sins of the world. Some heeded and were helped.

The writer, Rev. Robert W. Hucke, came to the Nanticoke Church, the Sunday before Thanksgiving, 1926, and served this congregation as student pastor until the following June 2, 1927, at which time he was ordained and installed as Pastor.

Upon our arrival in the parish, we found that the membership had dwindled until there were but fifty who were regarded as members. The congregation was in a most critical situation and even some of the older members of Wyoming Classis felt that the church was ready to disband, because of the few people who remained and the fact that there were so many divisions, animosities and heartaches among the people.

However, we set to work with prayerful zeal and devotion to the task before us. By the Grace of God alone, we were able to create a new environment and started the people working. We found, that with few exceptions they responded in a very fine manner, and as a result of this response and cooperation we have been able to make considerable progress.

The first task with which we were confronted was that of the basement. They were a few small dusty moldy rooms. Considerably one half of the church stood on rock. What a beautiful sight it was, and a memory I am sure, that will never be forgotten, of a large group of men working with pick and shovel by electric light to excavate the entire basement of the church. Much credit must also be given to the fine ladies of the congregation who served free lunches to the men every night. In a short time the work of excavating was finished and then we started to "build" our fine basement which we have today. It is as large as the church, very spacious and suitable to our needs, both for Church School purposes, Religious Education and social functions. In it we have a splendid and well equipped kitchen, in which gas stoves were placed. We also provided a ladies rest room completely furnished with lamps, rugs and the usual furniture.

And so we went from one task to the next accomplishing the following:

After the basement, which including labor, cost around $8000 we put in a new heating system so that we would not need to wear overcoats at the church services. This system cost us close to $2000.

An electric bulletin board was purchased by the Royal Daughters Bible Class, and it was a great aid in reaching the unchurched.

Cement walks were then placed around the church and between the church and parsonage. Previous to this there were no walks.

The church had very poor music facilities and so we purchased a new pipe organ and set of Haegen Chimes. The organ being one of the finest makes, costing about $3100.

We continued to beautify the church by papering it. The three chancel chairs were re-upholstered, as also was the pulpit, and new draperies were hung around the choir loft and choir assembly room. A cork bulletin board was placed in the vestibule and a new hymn board hung in front of the church. Several dozen of new church hymnals and Sunday School books were purchased.

Beautiful green altar hangings were purchased for the Trinity season. New collection plates were also furnished, and a much needed piano was purchased for the basement.

The street in the front of the parsonage and the church was paved, previous to this, it was covered with big cobble stones.

Copper spouting was then placed around the church. A new electric sweeper was purchased for use both in the church and the parsonage.

A gas heater for the water tank in the parsonage was purchased and a splendid gas range was placed in the parsonage.

This brings us to our last big forward act in a material way, namely, the brick veneering of our entire church. Previous to this, the church was almost like a sieve when the winter winds would blow, but now since we have it brick veneered, it is a most beautiful as well as comfortable church.

In addition to all this, we issued an inspirational church bulletin each Sunday.

Surely these various events of progress show that we have moved forward and we are glad to mention not only these works at the home base, but also our work of benevolence. We have seen the time when our benevolence to Classis was paid in full. Other times it was not, but it always was done according to the ability of the people in these latter days of economic depression.

The Pastoral and spiritual work of the congregation was greatly strengthened. Teacher Training Classes were organized and graduated for the first time. A Junior and Senior Choir was organized under the leadership of the organist, Mrs. Robert Hucke. We also introduced the greatly needed habit of having Holy Communion four times a year instead of the ordinary two times. Classes in German were also organized for the young people of the church.

A Daily Vacation Bible School was organized, the first of its kind to be held in the city. We had such a school each summer.

The pastor also was chosen in the county as the one to broadcast over the radio, which helped greatly to bring our church forward.

The pastor was also County Superintendent of Expert Endeavor causing the influence of our church to reach out way beyond the cities' ends.

Large numbers of new members were added to the church from time to time which gives us now over 225 communicant members. Our church has grown from a little obscure church to one of the cities most outstanding and influential pulpits.

We also introduced the idea of having early dawn services at Christmas and Easter.

Our order of worship was gradually improved.

The Sunday School has grown splendidly and has been graded and departmentalized.

The organizations of the church are to be commended for their faithful labors—The Ladies Aid Society and the Royal Daughters Bible Class, giving us not only most of the financial support but also that valuable but intangible support—namely the moral support.

We also tried to work with the boys, organizing them into a Cadet troop and the men into a Bible class and a Reformed Church man's league. The men however, do not have near the sense of feeling that they must be loyal and true to their responsibilities as compared with the loyalty of the women.

The relation of Pastor and people was most pleasant and we shall treasure many sacred memories of this, our first charge. We shall also treasure the set of resolutions drawn up by the Consistory when our resignation was presented. Our resignation went into effect September 30, 1931. We are grateful to our Heavenly Father for all the blessings we enjoyed, both material and spiritual, as we labored here in His vineyard and we hope and pray that greater blessings may still be in store for this whole hearted people. May the Lord grant it and bless them abundantly.

The writer came to Zion Reformed Church Dec. 31, 1931 and served this congregation as student pastor until May 26, 1932 at which time he was ordained and installed as pastor. There was always a cordial relationship existing between pastor and people. Many material things were accomplished and altogether we were quite happy as we labored here in our Master's Vineyard.

JANUARY 30, 1934—REV. HARVEY GOODLING

The next pastor of Zion Church, Rev. F. Nelson Schlegel, began his pastorate on May 1, 1934 and terminated it on May 20, 1937. During Rev. Schlegel's pastorate, a gift was made to the Zion Congregation of $1,500 by Mr. Charles Kurzawsky. The gift came without solicitation, and represented, in a very beautiful way, the affection of one of our elderly members for the blessed things for which the Church of Christ stands. In receiving this splendid gift the Consistory voted to use part of it as a payment toward the church's debt. Another part of it was used, in accord with a request made by the donor thru the pastor, for the improvement of the church's educational equipment. At the same time Mr. Kurzawsky made this gift to the congregation, he declared his interest in the wider work of the church by sending a check for $500 to the Board of Foreign Missions. On September 23, 1934, the congregation changed its name to Zion Evangelical and Reformed Church after the Reformed Church in the United States merged with the Evangelical Synod of North America. Rev. Schlegel's pastorate was a very pleasant one during which there was always a cordial and friendly relation between pastor and people.

The next pastor to come on the scene was Rev. Henry Jerome Leinbach who began his pastorate November 1, 1937 and ended it on July 23, 1961 when he died of injuries sustained in an automobile accident on July 16. Rev. Leinbach, a well learned man and active in civic as well as church affairs served the congregation for nearly a quarter of a century. Soon after Rev. Leinbach came to Nanticoke, he changed the order of worship to the one we use today. Many things were accomplished during his pastorate and many new additions to the church sanctuary were made. One of these was the presentation of the illuminated cross by Mrs. Kathryn Graboske (Ann Kate in memory of her husband). Also a steam table was purchased for the kitchen of the church. On March 22, 1940 the Three Hour Good Friday Devotional Service was held in Zion Church. In 1941, Rev. Leinbach made the following report to the congregation following the death of his wife.

This report would not be complete if I did not take this occasion to record my high and grateful appreciation of the kindness, consideration, and help, on the part of the congregation as a unit, of the various organizations and their members and officials, and of the members as individual friends which was made manifested during my pastorate. To give recognition of all the acts of kindness and courtesy is impossible. Your kindness was overwhelming to me personally and to my family. Nothing was left undone that could be done to make the burdens lighter and to show both your appreciation of me and Mr.

Leinbach. May the Good Lord abundantly bless all and everyone of you. Realizing that the years past and present have and will present vexing and difficult problems, we nevertheless cast ourselves upon the strength of our Heavenly Father and upon our Faithful Savior Jesus Christ, with the full assurance that as we place our trust in Him we shall not be confounded, and we shall be able to perform every task before us successfully.

Then after a few years, the congregation formed the Plymouth Nanticoke Charge with the First Reformed Church of Plymouth, Pa.

A youth fellowship, organized under the leadership of Mr. & Mrs. Elmer Lohman, contributed much to the advancement of the work of Christ in the Church.

In 1954, the Nanticoke-Plymouth Charge held an open house to celebrate the 50th anniversary of Rev. Leinbach's ordination into the Christian ministry. The congregation placed a new automatic stoker in the parsonage in 1956.

The church again changed its name. This time to the Zion United Church of Christ when the Evangelical and Reformed Church merged with the Christian Congregational Church in 1957.

One of the most outstanding events that took place during Rev. Leinbach's pastorate was the sending of a heifer to a deserving family in Europe thru the Board of World Ministries of United Church of Christ, by the Nanticoke-Plymouth Charge.

In October 1960, Elder Chester R. Lytle left the Zion Church in order to enter Lancaster Theological Seminary. He graduated from Seminary and was ordained into the Christian Ministry in 1964. He was able to serve His Lord but 4 short years when he was called to his eternal rest.

Following the tragic death of Rev. Leinbach, Rev. A. Ward Campbell, close friend of the deceased pastor, served the church for the next 3 years as supply pastor. Some of the things added to the church during Rev. Campbell's pastorate was the heavy oil base portrait of Rev. Leinbach which hangs in the vestibule. This portrait was done by Pawlowski and presented to the church by Earl W. Lohman Funeral Home. The candelabra were dedicated in memory of Pastor Leinbach by the Senior Choir and Congregation; new carpet was bought for the church; new drapery was placed around the choir loft and new hymnals were purchased for the church.

On October 11, 1964, Zion Church terminated its relationship with First Church of Plymouth in order to form a charge with Bethel Congregational Church.

After forming this Charge, it was decided that Zion Church would be supplied by Senior Seminary students. They supplied the church for about a year. When in 1965, Prof. Dr. Bashore (lay minister of the United Church of Christ) came and served the church as supply. During his stay the organ in the church was completely overhauled.

Finally on July 15, 1966, Rev. James W. Leamon was called to be the pastor of the Nanticoke Charge of the United Church of Christ (Zion and Bethel Churches). He accepted the call and was ordained at St. Mark's Church, Easton, Pa., in June 1966 and installed in Bethel Church in September 1966. Some of the things done so far during Rev. Leamon's pastorate are: the presentation and dedication of a communion chalice and paton; a new roof for the church. The Home Department presented the church with a new lecturn Bible in memory of Mrs. Martha Eckerd. A new oil furnace was installed in the parsonage and the latest improvement is the remodeling of the bathroom in the parsonage.

All in all the 80 years existence of Zion Church have been filled with both material and spiritual achievements which will remain in the hearts and minds of members and pastors for many years to come.

BETTER HOUSING

HON. RICHARD D. McCARTHY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1969

Mr. McCARTHY. Mr. Speaker, the National Housing Conference recently met in Washington, D.C., for their 38th annual convention. At the convention the conference adopted a series of resolutions emphasizing their commitment to the goals of the Housing and Urban Development Act of 1968. They recognize that we must increase our production of low- and moderate-income housing if Americans are to be adequately sheltered. They recognize that we must remove the obstacles to replacement of substandard housing if we are to meet the problems of our cities. They are to be commended for their concern about these problems.

Mr. Nathaniel S. Keith, president of the National Housing Conference, delivered the keynote statement at the start of the convention. I include his remarks for the information of my colleagues:

KEYNOTE STATEMENT BY NATHANIEL S. KEITH, PRESIDENT OF THE NATIONAL HOUSING CONFERENCE, AT THE 38TH ANNUAL CONVENTION, WASHINGTON, D.C., MARCH 10, 1969

It is a great pleasure to welcome Secretary Romney and his top staff in the Department of Housing and Urban Development to this 38th annual convention of the National Housing Conference. I know that our members and friends assembled here this afternoon are eager to hear from the Secretary and his colleagues; consequently my remarks will be brief.

Over the years, the National Housing Conference has worked in close concert with the Department of Housing and Urban Development and its predecessor agencies. This is not to say that we have always seen eye to eye with the Federal housing leadership on the specifics and details of programs. But on the broad issues and goals for housing and community development, our support and cooperation have been consistent and steadfast. This certainly continues to be the policy of this Conference.

It has also been our privilege and obligation to act in closest cooperation with the legislative leaders on housing and community development in the Congress. We have communicated to them our recommendations and goals, based on the broad experience and expertise of our membership. And we have acted as a channel of information on legislative proposals for the many national organizations which look to NHC as their principal clearing house in this field.

I believe it is also a basic role of the National Housing Conference to respond to the dynamic nature of national and local housing and development needs and to identify essential objectives, even if extended periods of education are required to achieve them. For example, the NHC was the first national organization to advocate the consolidation of principal Federal housing functions in a cabinet table status, many years before the achievement of that objective in 1965 with the establishment of the Department of Housing and Urban Development. Likewise, in addition to our traditional commitment to an effective and expanded public housing program for low income families, beginning in the early 1950's NHC identified the urgent need for special programs to meet the housing needs of moderate and low income families, just above the public housing level. This was reflected in legislative proposals which were partially achieved in the Housing Act of 1961 and which were greatly advanced by the interest assistance provisions of the Housing and Urban Development Act of 1968.

The NHC also advocated for many years a concerted approach by Federal, State and local programs on the problems of concentrated areas of blight and slums, based on the primary thrust of urban renewal and federally-assisted housing and community development activities. This approach was recognized by Congress in the model cities legislation of 1966 which we strongly supported and continue to support.

The resolutions adopted by the members of the National Housing Conference yesterday afternoon reflect our continuing response to the dynamics of housing and community development problems in the United States. They reflect equally our recognition of the inescapable tie between these problems and the urban crisis.

Our emphasis is on the essential importance of greatly increased production if the goals laid out by the Housing and Urban Development Act of 1968 are to be achieved. The first step obviously is to fund fully the programs authorized by the 1968 Act, which were drastically reduced by Congressional appropriations prior to the adjournment of the 90th Congress last fall.

There also must be expedition of Federal procession of the local programs which can be financed; we are encouraged by the progress which has been made but much more needs to be done. Also, there must be imaginative but achievable approaches to enlarging the resources—private and public—which will be essential if the production goals of the 1968 Act are to be meaningful.

The NHC resolutions also reflect our deep concern with the impact of the unprecedented tight money market on expanded housing production for moderate and lower income families, as contemplated by the 1968 Act. They present positive recommendations for administrative and legislative action to relieve this problem, with limited effect on the Federal budget.

Our resolution likewise reflect our recognition of the implications of the continuing massive population growth already in process and the need for establishing a realistic national urban growth policy, with responsive provisions for necessary Federal aid.

The conviction of the National Housing Conference is that the national goals reiterated by the Housing and Urban Development Act of 1968 must be fulfilled over the coming years and not be a stigmatized as paper promises. We pledge our support to help make these goals a reality.

WYATT SENDS QUESTIONNAIRE

HON. WENDELL WYATT

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1969

Mr. WYATT. Mr. Speaker, for the fifth straight year I am sending the residents of Oregon's First Congressional District a questionnaire, seeking their views on the pressing problems facing Congress and the Nation.

The replies to this annual query have been invaluable to me in formulating my legislative judgment on the important issues in the past, and I am sure the answers to this year's questionnaire will prove likewise useful.

I would like to present my fifth annual questionnaire at this time:

WASHINGTON SPOTLIGHT: CONGRESSMAN WENDELL WYATT REPORTS

APRIL 1969.

DEAR FRIEND: A great variety of complex problems, both at home and abroad, face a new Congress and a new Administration this

year. The Paris peace talks, tax reform proposals, and the great upsurge in crime are but a few of the matters now demanding immediate attention and action.

For the fifth year in a row I am sending out a list of questions so you may have the opportunity of expressing to me your views on the crucial issues before Congress. Never have your opinions been of greater importance. While the final responsibility for my voting record rests with me alone, the excellent response to my previous questionnaires has been very helpful to me in formulating my legislative judgments.

A simple Yes or No answer may not fully express your feelings. In such case, your further comments are welcomed.

To return this questionnaire, simply fold it over and affix a six cent stamp. Please do not seal it with staples or tape. Thank you.

Sincerely yours,

WENDELL WYATT,
First District, Oregon.

---

1. If the Paris talks drag on with no apparent progress toward a peaceful settlement of the Vietnam conflict, would you favor a resumption of the bombing of North Vietnam?
☐ Yes.
☐ No.
☐ No opinion.

2. Should the President be required to secure the approval of Congress before taking any action involving the commitment of American forces to hostile actions abroad?
☐ Yes.
☐ No.
☐ No opinion.

3. Should the United States extend diplomatic recognition to Red China?
☐ Yes.
☐ No.
☐ No opinion.

4. Do you favor President Nixon's recommendation for a limited anti-ballistic missile program?
☐ Yes.
☐ No.
☐ No opinion.

5. Foreign Aid:
a. Should the United States continue to extend *military* assistance to other nations?
☐ Yes.
☐ No.
☐ No opinion.
b. Should the United States continue to extend *economic* assistance to other nations?
☐ Yes.
☐ No.
☐ No opinion.

6. Once the Vietnam conflict has been resolved, would you favor replacement of the present draft system with an all-volunteer army?
☐ Yes.
☐ No.
☐ No opinion.

7. Tax Reform: Do you feel that there are substantial inequities and loopholes in the Federal Income Tax laws which require change?
☐ Yes.
☐ No.
☐ No opinion.

8. Do you favor the banning of cigarette advertising on television?
☐ Yes.
☐ No.
☐ No opinion.

9. Should Congress enact a statute to require the licensing and registration of all firearms?
☐ Yes.
☐ No.
☐ No opinion.

10. Should the Congress create a Cabinet-level Department of Consumer Affairs?
☐ Yes.
☐ No.
☐ No opinion.

11. Do you favor President Nixon's proposal to create a National Law Enforcement Academy to up-grade the competence of state and local police?
☐ Yes.
☐ No.
☐ No opinion.

12. Should the National Labor Relations Act be amended to require that farmers recognize and bargain with unions representing their workers?
☐ Yes.
☐ No.
☐ No opinion.

13. Should Congress place a ceiling on the total amount of Federal farm subsidy payments which one person may receive in any one year?
☐ Yes.
☐ No.
☐ No opinion.

14. Do you favor President Nixon's proposal for automatic cost-of-living adjustments in social security benefit payments?
☐ Yes.
☐ No.
☐ No opinion.

15. Should Congress propose a Constitutional Amendment to set the minimum voting age at 18 in all states?
☐ Yes.
☐ No.
☐ No opinion.

16. Should Congress propose a Constitutional Amendment to permit voluntary non-denominational prayer in public schools?
☐ Yes.
☐ No.
☐ No opinion.

17. Electoral College reform is being advocated. Which of the following choices do you prefer? (Please check one only.)
☐ Abolish the Electoral College system and provide for the direct popular election of the President.
☐ Provide for the election of presidential electors by districts within each state, rather than the present "winner-take-all" system of state at-large election.
☐ Provide for the proportional division of each state's electoral votes among the various presidential candidates in accord with the share of the popular vote each receives in the state.
☐ No change in the present system.

DECENCY RALLY IN FLORIDA DRAWS 30,000

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1969

Mr. ASHBROOK. Mr. Speaker, a short editorial from the Philadelphia Inquirer and a news story by the Associated Press appearing in the Chicago Tribune, both dated today, March 24, provide a marked contrast between the long established, wholesome values which have been part and parcel of our heritage and the sick, disruptive policies of those who seek to tear down our society. The Inquirer editorial follows:

HATEFUL AND DISGUSTING

District Attorney Specter and Police Commissioner Rizzo should have full community support—and, especially, the cooperation of college and university authorities—in their investigation of a crudely worded pamphlet, circulating on the campuses of educational institutions in the Philadelphia area, which details methods of conducting violent demonstrations.

The manual features phrases right out of the gutter in referring to policemen. It instructs in the manufacture of weapons. It tells how to set fire to buildings.

Participants in the preparation and distribution of this foul and filthy tract should be brought to the bar of public accountability and prosecuted to the maximum extent the law will allow.

Although these attempts to encourage violence are distressing, it is encouraging to see American youth opt for positive and constructive programs such as the Decency Rally held in Miami, Fla., yesterday. The rally, attended by approximately 30,000 youths and adults, was supported by a number of organizations including the American Legion and major religious denominations. Short talks were delivered by teenage speakers on "God, Parents, Patriotism, Sexuality, and Brotherhood," to quote the AP release. Entertainers including Jackie Gleason, Anita Bryant, and the Lettermen helped make the rally a success by their appearances.

The original organizer of the rally, Mike Levesque, a 17-year-old senior at Miami Springs High School and Miss Julie James and other members of the Rally for Decency executive committee are to be commended for their efforts in organizing the rally. I certainly hope this is the forerunner of many such events throughout the land.

I include the article "Decency Rally in Florida Draws 30,000," in the RECORD at this point:

[From the Chicago (Ill.) Tribune, Mar. 24, 1969]

DECENCY RALLY IN FLORIDA DRAWS 30,000

MIAMI, March 23 (AP)—Thirty thousand hand-clapping persons, some waving signs saying "Down With Obscenity," rallied in the Orange bowl today to support a teen-agers' crusade for decency in entertainment.

Teen-agers organized the rally after Jim Morrison, lead singer of The Doors, was charged with indecent exposure during a Miami concert on March 1. Six warrants have been issued for Morrison's arrest.

"This is not a protest rally," said Julie James, 18, a member of the teen-age Rally for Decency executive committee. "We're not against something. We're for something."

THREE-MINUTE TALKS

Teen-age speakers gave three minute talks on God, parents, patriotism, sexuality, and brotherhood. There also were appearances by professional entertainers who donated their services.

"Sex is definitely being exploited and it is because society has been losing its reverence for one's sexuality," Miss James said.

The shirt-sleeved crowd basking in a warm sun cheered for entertainers such as Jackie Gleason, Anita Bryant, and the Lettermen who appeared to applaud the rally.

COMMENT BY GLEASON

"I believe this kind of movement will snowball across the United States and perhaps around the world," Gleason said.

"I think it's great; there should be more things like that," said Tony Butala of The Lettermen.

The original organizer of the rally, Mike Levesque, 17, a senior at Miami Springs High school, said the idea grew out of a Catholic youth group discussion two days after the controversial Doors concert.

RAPID GROWTH CITED

Levesque said he was impressed by the rapid growth of the decency movement and the support it gained from adults.

The crowd was about evenly split between teen-agers and adults.

Numerous organizations, including major religious denominations, contributed to the rally. American Legion members passed out 10,000 small American flags.

BUDGET REQUESTS FOR NASA PROGRAMS

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1969

Mr. FULTON of Pennsylvania. Mr. Speaker, it is a pleasure to include in the CONGRESSIONAL RECORD my correspondence with Dr. Thomas O. Paine, newly confirmed Administrator of the National Aeronautics and Space Administration—NASA—with regard to NASA's original budget requests from the Bureau of the Budget for fiscal year 1970:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., March 19, 1969.

Dr. THOMAS O. PAINE,
Administrator, National Aeronautics and Space Administration, Washington, D.C.

DEAR DR. PAINE: Will you kindly arrange to obtain for me the presentation of NASA to the Bureau of the Budget for the fiscal year 1970 authorization of appropriation.

I would like to have the presentation in the same categories and in similar form to the presentation which NASA has made to the Committee on Science & Astronautics.

I understand that there have been two presentations made by NASA to the Bureau of the Budget: one at the level of $4.7 billion; another at the level of $4.2 billion. I am also interested in any revisions proposed by NASA since the inauguration of the Nixon Administration.

My purpose is to obtain a comparison of where the Bureau of the Budget has made reductions in line items of the NASA request. As the Subcommittees are now finishing their hearings, it becomes timely that a reply be prompt.

Sincerely,

JIM FULTON.

P.S.—As I have stated in the hearings of the Science & Astronautics Committee as well as to various NASA officials and personnel, it is my intention to go over the budget for fiscal year 1970 carefully to see that there are no crippling reductions in the budget and to find the optimum rate of expenditures.

My opinion is that this will result in a substantial restoration of funds to NASA, during fiscal year 1970.

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION,
Washington, D.C., March 21, 1969.

Hon. JAMES G. FULTON,
House of Representatives, Washington, D.C.

DEAR MR. FULTON: This is in response to your letter of March 19 concerning NASA's presentations to the Bureau of the Budget with regard to the FY 1970 budget request. The attached table indicates, for each line item, the budget request submitted by President Johnson, and the respective amounts included in NASA's earlier estimates at the $4.2 and $4.7 billion levels.

As you know, the new Administration has requested the head of each agency and the Director of the Bureau of the Budget to review the budget requests of the previous Administration in the light of the policies of the new Administration and the overall fiscal situation of the Nation at this point in time. The reviews are now under way, and, under specific directions from the Budget Director, until such time as this process is completed and the President has made his decision, we are not at liberty to discuss the recommendations which we have made.

As we have indicated in testimony before the Committee on Science and Astronautics this year, the three areas of principal concern under President Johnson's request are the areas of continued, and extended, lunar exploration, manned orbital operations after the Apollo Applications Program, and the production of large space boosters. It is my hope that as we move forward with our considerations with President Nixon's Task Group on the space program we will be able to focus attention both on these problems and other areas of long range concern in the Nation's aeronautics and space programs.

Sincerely yours,

T. O. PAINE,
Acting Administrator.

NASA BUDGET LEVEL COMPARISONS

The budget guidelines from the previous Administration were, in effect, that NASA should submit estimates for a minimum program for continuing on-going programs, include only new starts or extensions considered absolutely essential, and wherever possible, defer new programs and leave the decisions to the new Administration. The amount we requested under these guidelines was $4.2 billion. In addition we did present to the Bureau our estimates of what we felt would be necessary to move this nation toward a position of world leadership in space and aeronautics. These estimates totalled about $4.7 billion. The table below reflects NASA's request in comparison with that allowed in President Johnson's FY 1970 Budget after his consideration of all the needs of the Federal Government and the revenues available to meet such needs.

BUDGET LEVEL COMPARISONS

[In millions]

	Fiscal year 1970 budget estimates	$4.2 billion level	$4.7 billion level
Apollo [1]	$1,651.1	$1,777.5	$1,950.3
Space flight operations [2]	[4] 354.1	403.1	473.1
Advanced missions	2.5	7.5	10.0
Physics and astronomy	119.6	149.5	156.5
Lunar and planetary	146.8	138.8	202.2
Bioscience	32.4	47.1	64.4
Space applications	135.8	161.8	199.8
Launch vehicle procurement	124.2	128.0	132.0
Sustaining university program	9.0	39.0	57.0
Basic research	21.4	20.6	24.8
Space vehicle systems	30.0	30.9	37.7
Electronic systems	35.0	38.2	52.6
Human factors systems	23.6	24.2	32.3
Space power and electronic propellant systems	39.9	41.0	44.5
Nuclear rockets	36.5	36.5	50.0
Chemical propulsion	25.1	35.6	44.1
Aeronautical vehicles	78.9	100.5	100.5
Tracking and data acquisition	298.0	310.3	310.3
Technology utilization	5.0	5.0	7.2
Total, R. & D.	3,168.9	[4] 3,495.1	[4] 3,949.3
Research and program management	650.9	[4] 644.1	[4] 665.0
Construction of facilities	58.2	79.2	83.2
Total, NASA	3,878.0	4,218.4	4,697.5

[1] Includes lunar exploration.
[2] Includes AAP, space station and shuttle, and operations.
[3] Includes $117,473,000 from fiscal year 1969 which has been reserved from apportionment by BOB (Revenue and Expenditure Control Act reductions).
[4] Not adjusted for conversion of certain support service contract operations at the Goddard Space Flight Center which amounts to $7,300,000.

ACID MINE DRAINAGE

HON. CLARENCE E. MILLER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1969

Mr. MILLER of Ohio. Mr. Speaker, acid mine drainage pollution is a serious problem in many areas of the country. Two engineers at Ohio State University are engaged in research that shows promise of alleviating this blight on the watersheds and streams in mining districts. A report on their progress was published in the March 22, 1969, edition of the Lancaster, Ohio, Eagle-Gazette. I include this article in the RECORD:

SOUTHEAST OHIO PILOT PLANT FIGHTS TO END DREAD DISEASE

(By Charles E. Piatt)

Acid mine drainage is the number one disease of Appalachia, and efforts to make the mountains healthy again have amounted to an unequaled reclamation project.

In the past 6 months, a team of Ohio State University research engineers headed by Drs. Edwin E. Smith and Kenesaw S. Shumate has taken what they call a giant step toward the solution of acid-mine drainage.

Working in a laboratory on the Columbus main campus and a complex of small mines 70 miles south in Ohio's hilly coal country, Smith's group has decided the sulfuric acid is produced by vapor phase oxidation of iron pyrite deep in the mines.

Most experts have blamed the oxygen in water, draining from overburden through a coal seam, and subsequently out the mouth of a mine, for feeding the reaction which produces sulfuric acid and an iron ("yellowboy") precipitate.

Smith's theory, being proved weekly when he collects samples from 8 small mines, opens up a whole new set of possibilities for ending acid mine drainage at the source.

It also punches holes in existing abatement procedures.

Smith has found that sulfuric acid is being manufactured wherever oxygen in the air is in contact with iron pyrite.

While oxygen flow was always thought to end at a mine's coal face, sometimes deep in a mine, Smith has shown that air, containing oxygen, flows easily through porous sandstone and shale above the coal seam to react with pyrite beyond the coal face.

Waterflooding of mines below drainage (below the water table) is fine, acknowledged Smith, but for the mines which have drained their overburden of a water table, thus allowing free air passage to the seam, flooding and sealing is to no avail.

The researchers, working on a $79,000 project for the Federal Water Pollution Control Agency, Department of Interior, and satisfied that vapor phase oxygen is their biggest problem, are now trying some novel methods of removing or nullifying the effect of the oxygen in a mine.

Increasing the atmospheric pressure of a mine with something other than air, an inert gas, has halted the acid-forming pyrite reaction during early research at the Ohio State mine site.

Smith's gas-flood principle would be used in conjunction with a partial seal. Co-worker Shumate is considering the use of a bladder, or rubber inflatable seal, which would reduce the size of the opening and facilitate gas pumping.

Smith says water seepage from gas-pumped mines would occur but be no problem.

Investigation of the vapor-phase oxygen has set this team's work apart from the hundreds of researchers and millions of dollars at work on acid mine drainage.

Smith, who is willing to stake his professional reputation on vapor-phase oxygen as the problem in acid drainage, says that in three to five years the acid drainage pattern could start to turn.

"Legislation has helped stop new sources of the tainted drainage," says Smith, "and with the money now being spent on schemes that won't work, we could start restoring watersheds by systematically deoxygenating individual mines."

Smith's pilot is a hollow in southeastern Ohio, about 4 miles north of Lake Hope in Vinton County and about 70 miles from Ohio State's Columbus campus, with a small drift mine on one side and an exposed coal seam on the other.

The drift mine has been "worked" by the university since 1956.

On the other side of the hollow, the hill was scraped to expose a coal seam and a mining machine brought in to drill seven 36-inch diameter auger holes in the seam.

Auger drilling, commonly used to recover coal from thin seams, provided the site with seven individual research mines.

The auger holes extend from 120 to 200 feet into the hill and are spaced about 100 feet apart.

THE HIGH COST OF KIDNEY CARE

HON. EDWARD R. ROYBAL

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1969

Mr. ROYBAL. Mr. Speaker, a front-page article in a recent edition of the Wall Street Journal was titled with the disturbing headline: "The Cost of Living: Some Kidney Patients Die for Lack of Funds for Machine Treatment."

Because I believe this article contains an accurate description of the prohibitive costs of comprehensive kidney treatment in America today—as well as the urgent need to find a better way to provide such lifegiving health care to aid victims of chronic kidney disease—I would like to include in the CONGRESSIONAL RECORD at this point the full text of the Wall Street Journal article:

THE COST OF LIVING: SOME KIDNEY PATIENTS DIE FOR LACK OF FUNDS FOR MACHINE TREATMENT—ARTIFICIAL ORGAN WORKS WELL, BUT USE IS COSTLY—FEDERAL GRANTS, DONATIONS DWINDLE—INSURANCE DOESN'T MEET BILLS

(By Jim Hyatt)

The effort to treat sufferers from chronic kidney disease by machine, which once promised to save thousands of lives a year, is floundering for lack of financial support.

High costs have plagued the so-called artificial kidney program from the outset. Hospital bills for the twice-weekly machine blood "washings" that take over the kidneys' vital function of removing blood wastes and adjusting body chemistry now run from $10,000 to $20,000 annually per patient. That's the main reason only about 1,700 Americans currently receive the treatments, while an estimated 8,000 people will die this year for lack of them.

But even this far from adequate situation is deteriorating. Federal grants have been running out at the 14 hospitals designated by the U.S. Public Health Service about three years ago as demonstration centers for the process; without Government help, some of them have had to reduce the number of cases they handle.

Some private hospitals have been forced into similar cutbacks because of difficulties in attracting donations to support patients who can't pay the cost themselves. Indeed, private support of any kind has been slow in coming.

COMING OUT SECOND BEST

"The cost per capita of the treatment is an overwhelming drawback when we approach organizations for help," says Dr. Frederic B. Westervelt, director of the kidney care demonstration center at the University of Virginia School of Medicine in Charlottesville. "They say, 'Look what we can do for $10,000 a year—we can give 20 people an artificial leg.' When they measure what they think is the greatest good for the greatest number, we come out second best."

As a result of this lack of funds, hospital committees that once spent weeks agonizing over which artificial kidney candidates would receive the life-giving treatments, called hemodialysis or simply dialysis, now find that the decision has been taken out of their hands. "Who gets the care here now is determined purely by ability to pay—we don't like it, but that's the way it is," says Dr. Daniel Leb of the Louisville (Ky.) General Hospital's kidney center, run by the University of Louisville School of Medicine.

Physicians' chagrin over the financial obstacles to the treatment is heightened by the highly advanced state of artificial kidney technology. The prototype of the present artificial kidney machine, which resembles a squat old-fashioned washing machine, was developed in 1943 in Holland by Dr. Willem J. Kolff, who now is a resident of the U.S. The patient is connected to the machine, and his blood is pumped through a series of tubes, coils and filters.

The key element of the device is a thin cellophane membrane immersed in a saline solution. Through the process of osmosis, wastes in the blood that otherwise would accumulate and cause death pass through the membrane into the solution. At the same time, vital chemicals normally added to the blood by healthy kidneys pass from the solution into the blood. The "cleansed" blood then is returned to the body.

A SURGICAL BREAKTHROUGH

For a number of years, the machine could be used only when a few treatments would suffice—such as in cases of acute infections—because the surgery required to connect the patient with the machine was difficult and dangerous. In 1960, however, a team of specialists from the University of Washington devised a system that made the artificial kidney available to individuals who had suffered irreparable kidney damage and needed frequent blood washings. In minor surgery, they permanently inserted small plastic tubes in an artery and vein in a patient's arm or leg. During dialysis, the machine is easily connected to the body through those tubes; when the treatment is finished, the tubes are plugged and covered with a small bandage.

Recently, some doctors have improved on this method. By increasing the flow of blood through an artery and a vein, they enlarge them to the point where they can be easily punctured with large needles for connection to the kidney machine. This makes the mechanics of dialysis about as simple as giving blood.

Dialysis is time consuming; the twice-weekly treatments take from six to 13 hours each, depending on the patient and model of machine used. But it is painless, and patients undergoing the life-long treatment can lead a nearly normal life. Clyde Shields of Seattle, who nine years ago received vein and artery implants from the University of Washington team and became the first person to start regular dialysis by machine, still is regularly employed as a mechanic. He is 49 years old.

THE ROLE OF TRANSPLANTS

Treatment by kidney machine isn't the only alternative open to victims of kidney failure. Kidney transplant operations have been performed since 1954 with a high and growing rate of success. Up to last year, three-fourths of the transplant patients who received a kidney from a blood relative had survived for at least one year after the operation (people have two kidneys but can live with just one). The one-year survival rate for a person who received a kidney from a cadaver was 45%.

The utility of this operation is limited, however. Many kidney patients might not survive a transplant operation because of poor general physical condition, and not nearly enough suitable organs are available for those who could benefit. Only about 2,000 kidney transplants have been made in the past 14 years, an average of less than 150 a year.

Moreover, transplant candidates often require dialysis. They usually must undergo the treatment while awaiting an organ, and they must fall back on the machine if the operation fails.

Amid the general gloom over the outlook for artificial kidney treatment, some see a hopeful sign in the recent trend for more patients to receive machine dialysis at home instead of in a hospital. The savings from such a move can be substantial. The first-year bill for home dialysis, including $3,000 to $4,000 to purchase the artificial kidney machine itself and fees for training a family member to run it, usually total about $10,000. After that, it costs $3,000 to $5,000 a year to maintain the machine and buy the various components and chemicals that must be changed after every use.

About 200 of the 1,700 Americans on machine dialysis currently are treated at home, and some kidney specialists say they have high hopes that the number will rise sharply in the next few years. In 1967, the U.S. Public Health Service moved to accelerate the trend by setting up 12 home treatment training centers around the country and promising them $4 million over a five-year period.

But many experts in the field strongly doubt that home care will assume the majority of the treatment burden in the near future. They point out that some patients don't have a relative who can assume the job of operating the complex artificial kidney, others don't have homes where the treatments can be safely carried out and still more have strong fears about entrusting themselves to the care of a family member when a mistake could prove fatal. Moreover, even patients who intend to purchase their own artificial kidney must receive hospital dialysis for several months while a relative is being trained to run the machine.

THE FINANCIAL SQUEEZE

To date, the financial squeeze has been hardest on the hospitals picked by the Federal Government in 1965 and 1966 to demonstrate the feasibility of the widespread use of artificial kidneys. The Federal grants—which totaled $2.5 million—paid the operational costs of the kidney centers and permitted them to admit patients who couldn't pay for their own treatments. Federal funds for medical projects go only for research or treatment-demonstration purposes, not for daily general patient care, so the centers knew the funds might not be renewed when

the grants expired. But many of them felt that the Government wouldn't cut them off after having made a commitment.

Since it became clear that the grants would stop in the wake of the Government economy drive caused by the war in Vietnam, the centers have moved to pare their rolls. None have summarily cut off any patients, but when a patient receives a transplant or moves to home care, he isn't replaced.

The center at Cleveland's Mt. Sinai Hospital, for instance, now has only 17 patients on dialysis, down from 30 in 1967; its Federal grant expired Dec. 31. The unit at the University of Alabama Medical Center in Birmingham now only accepts patients likely to receive transplants fairly quickly; if new funds can't be obtained, it plans to phase out its artificial kidney program as soon as other facilities can be found for its 15 present patients.

PAY IN ADVANCE

The center at Hennepin County General Hospital in Minneapolis, whose Federal grant expired Dec. 31, now requires some prospective patients to put $12,000—funds for at least one year's care—in an escrow account before they can begin dialysis. "A couple of people have felt they'd rather die than spend the amount of money involved," says one doctor at the hospital.

A bill now pending in Congress would commit new Federal money for artificial kidney programs, but its prospects for passage aren't clear now. A similar bill made little headway last year.

The outlook for developing other sources of funds is even less bright. Only a half dozen states support dialysis patients, and few others show signs of following. New York has the largest state program; according to Dr. Ira Greifer, medical director for the National Kidney Foundation, Medicaid in New York helps pay dialysis bills for more than half of the state's 400 dialysis patients and the state has set up a Kidney Disease Institute to coordinate the various public and private kidney treatment projects. But state officials say that about 900 New Yorkers a year need the treatments, and their efforts help only a fraction of those who need financial help.

Ordinary types of health insurance often pay some costs of dialysis but typically fall short of meeting the actual expenses. The average maximum major medical policy benefit of $10,000 "just about covers the preliminary steps to start a patient on dialysis," says L. A. Orsini, an official of the Health Insurance Association, a New York-based trade group.

INSURERS ARE HESITANT

A few companies now offer kidney treatment policies. Western States Life Insurance Co. in Sacramento, Calif., for instance, sells a $50,000 maximum benefit group policy for an organ transplant or dialysis. However, most private insurers have been reluctant to enter the field.

Persons covered by the Federal Medicare program for the elderly receive little aid for dialysis. Medicaid, the Federally assisted program adopted by some states to help low-income people pay medical expenses, provides more aid—$25 for each in-hospital dialysis treatment—but still leaves substantial bills.

What's left for some kidney disease sufferers, then, is charity. While organized support for kidney care has been slow in coming, instances abound of local largess in individual cases. Last Christmas, for example, residents of Whitesville, Ky., a town of fewer than 1,000, raised $26,000 in four days for Roscoe French, a 33-year-old carpenter for whom machine dialysis represented the only chance at life.

Even well-off victims may end up needing charity. "If you aren't indigent when you start dialysis, you soon will be," says one physician.

REDS GROW BOLDER ON CAMPUSES

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1969

Mr. RARICK. Mr. Speaker, as college campus riots spread so does the Communist role in the disturbances.

British historian, Lord MacCaulay, once told an American friend:

Your Republic will be fearfully plundered and laid waste by barbarians in the 20th Century as the Roman empire was in the 5th, with this difference—that the Huns and Vandals will have been engendered within your own country, by your own institutions.

A news article written by Robert Betts, a reporter for Copley News Service tells how the Reds work and the tools they use to disrupt and destroy. I place his article at this point in the RECORD:

ACTIONS REVEAL REDS

(By Robert Betts)

Americans do not have to look for Reds under the bed.

They can be seen almost any night on television—leading a college riot or mingling in the melee like extras in a movie crowd scene.

They are not all card-carrying members of the Communist party. They are defined not by whether they pay party dues, but by their actions, their vocabulary and the way they always manage to be where trouble is.

Those who keep close, continuing watch on the unfolding pattern of subversion in this country can pick them out easily.

The average American sees only turmoil and shakes his head over the "impetuousness of youth."

Educators tell him—between frequent fires, bombings and other acts of sabotage and terrorism—that the young people have many legitimate grievances and that they need "patience and understanding."

Others oversimplify the problem, and play into the hands of those who ridicule "'Red-baiters," by attributing all criticism and protest to "the Communist conspiracy."

A bewildering assortment of youth protest movements adds to the confusion—the Third World Liberation Front, Progressive Labor Movement, New Left Forum, W.E.B. DuBois clubs, Students for a Democratic Society, Young Socialist Alliance, Young People's Socialist League, Student Non-Violent Coordinating Committee and dozens of others.

Communist activity inside such groups is so subtle and diversified that it is not always easy to distinguish between real enemies and well-meaning, misguided, would-be reformers.

Whatever the radicals call themselves, democratic-socialist or Marxist-Leninist, progressive-laborite or Trotskyite, Stalinist or Maoist, white Castroite and black militant, so far as the Federal Bureau of Investigation is concerned, they are all the same color underneath—Red.

Distinction between such labels is irrelevant, Director J. Edgar Hoover of the Federal Bureau of Investigation points out, "because the basic objective of both New Left and oldline Communist and their adherents in our society is to completely destroy our form of government."

The leaders of campus violence make no secret of it. They travel from campus to campus making speeches and distributing literature calling for the overthrow of "bourgeois America."

Peter Camejo, 29-year-old nonstudent leader of the Socialist Workers party, who has loomed large at every demonstration of consequence over the last four years, recently told the Third World Liberation Front in San Francisco: "Yours is but part of a world struggle against the ruling class of the United States. Your victory will be the victory of oppressed peoples around the world."

Camejo, who faces a conspiracy trial for his part in the seizure of Moses Hall, Berkeley, last October, was writing from Cuba. Police list him as a "Trotskyite-Communist professional agitator."

Another familiar face is that of Tom Hayden of the Students for a Democratic Society, whose members call themselves "professional revolutionaries" committed to the destruction of imperialism and capitalism by organized sedition and guerrilla force.

Hayden, 29, helped found the SDS in 1961 when he was a University of Michigan student. Today he is SDS tactical chieftain. He visited Hanoi in 1965 with top U.S. Red strategist Herbert Aptheker. He also has consorted with Red bigwigs in Moscow, Peking and Havana.

Last year he went to Paris to confer with North Vietnamese delegates, then came home to lead a student crusade against the draft.

He was also at Columbia last May, helping local SDS man Mark Rudd, another delegate to Cuba, to organize the assault on the university buildings.

Two months later Hayden, disguised this time with dark glasses, pulled-down hat and bandana mask, was among the 8,000 Chicago demonstrators during their confrontation with the police. Still later, he showed up for the troubles at San Francisco State College.

The task, says Hayden, is to "create more 'Chicagos' in our cities, more 'Columbias' on our campuses."

Also on the picket line recently at San Francisco State was Arthur Goldberg, one of the organizers of the Free Speech Movement which in 1964 put the blight on Berkeley.

Other FSM instigators who have been busy before and since include:

Steve Weissman, who graduated from Berkeley and went on to Stanford to be a ringleader in the troubles there.

Bettina Aptheker, Communist daughter of Herbert. Having at the tender age of 16 suffered three broken ribs during a rowdy "peace" demonstration in New York, Bettina is not such an ardent advocate of the violent method. She prefers the strategy of "going limp," a fashion she set during the Berkeley riots.

Mike Myerson, former chairman of the early Berkeley radical group SLATE, delegate to the Eighth World Communist Youth Festival in Helsinki, who went on to found, with Bettina and others, the DuBois clubs for bringing together Communist youth. On a visit to Hanoi in 1965, Myerson was proclaimed an "honorary nephew" of Communist leader Ho Chi Minh. He has participated in demonstrations in this country wearing a Viet Cong cap and a ring he claims was made from the wreckage of an American plane.

Karen Wald, or Lieberman, who reportedly went from Berkeley to Cuba, on to Moscow, back to New York in time for the Columbia uprising, then back to Berkeley for the latest disturbance there.

Jerry Rubin, now in prison for his part in the Chicago disorders. In a letter to friends asking for contributions to the "Rubin Defense Committee," Rubin wrote: "To challenge the courts is to attack American society at its roots. In campus rebellions, the most revolutionary demand, the demand that can never be granted by the administration, is the demand for amnesty . . . An offensive against the courts and jails—including direct action and direct legal and financial aid to the victims of the system—would be the most immediate link that a white movement could possibly make with blacks and poor whites . . . As a beginning let's organize massive mobilizations for the spring, nationally coordinated and very theatrical, taking place near courts, jails and military stockades."

Others who will not be appearing on television for a while are Eldridge Cleaver, 33, in hiding after a parole violation in connection with charges stemming from a gun battle with police, and Huey Newton, 26, Black Panther "minister of defense," now serving 2 to 15 years for manslaughter of an Oakland policeman.

Both men were defended by Charles Garry, a San Francisco lawyer identified as a Communist by a former fellow member in testimony before the House Committee on Un-American Activities in 1957.

A member of the Communist-organized National Lawyers Guild which, it is said, forms the "legal bulwark of the Communist party," Garry is one of several called on to defend Communists in court, as well as to play a leading role as public speakers and lobbyists against federal and local government security programs.

Garry is also one of the defense attorneys in the trial of the seven Oakland radicals arrested during "Stop the Draft" week in October, 1967.

Among the seven is Terry Cannon, who recently met comrades of the National Liberation Front in Budapest.

"The NLF could not understand why we did not have a single revolutionary organization like them in this country, one organization with a strategy for the liberation of America," he recently told fellow students. "We tried to explain that we were new at this business, we were experimenting, we were still trying to find the revolutionary tactic that would bring this country down."

When it does come down, Cannon thinks, it will be through "some massive combination of leaflets, sit-downs, strikes and fighting in the streets—all of them together."

Another one of the seven is Steve Hamilton, a well known Berkeley troublemaker, listed on file in the dean of students' office as chairman of Campus Progressive Labor, president of the May 2 Movement, chairman of the Medical Aid Committee (formed to give aid to wounded demonstrators).

Hamilton told the House Committee on Un-American Activities in 1966: "I joined with other people who are fighting for a just and socialist society and I became a member of the Progressive Labor party and became a Marxist-Leninist."

Some Negro groups have steered clear of the Communists. Their leaders are experienced, sincere men concerned only to right the wrongs that Negroes have undeniably suffered down the years. They are conducting a responsible, worthwhile campaign for better facilities for their people and, in schools, more courses tailored to what they regard as their own needs. Above all, they want recognition for the black people as people with pride in their own heroes, history and culture.

Some black groups, however, have fallen under the Communist spell. For all the venomous anti-white invective, it is never anti-Red. The Red line is followed. The same language is used. Communists provide the causes, the propaganda and much of the funds. To calls for "Negro rights" have been added slogans like "imperialist warmongers," "capitalist scum" and others supplied by the Reds.

Nor is the campaign confined to hate words and obscenities. The threat of physical violence—beating, knifing, shooting—is also used to deter opposition.

Black Panther "minister of education" George Murray, former Oakland elementary schoolteacher, education coordinator for San Francisco State's Summer Youth Work program and lately part-time English teacher at the college has told students: "America represents slavery, America represents hell."

He calls the American flag "a piece of toilet paper" and says it should be "flushed down the toilet and burned in the sewers."

Murray claims he was victimized by suspension from the college for urging the students to "carry guns to protect themselves." His actual words at the campus rally left little doubt what he meant. "What we want to do," he said, "is use guns and force to liberate black people, as our brothers all over the world are doing against American imperialism."

Murray is an old-time Marxist. The Communist party publication in Cuba, which he also has visited, gave him 2½ pages. He was quoted as saying: "Every time a guerrilla knocks out a U.S. soldier this means one aggressor less against those who fight for freedom in the United States." The Detroit riot, he said, kept National Guardsmen busy so they could not even be considered for duty in Vietnam.

Many student demonstrators, both black and white, deride suggestions of Communist connection with their movements.

"Marx? Lenin? Those old fuddy-duddies," one young Berkeley demonstrator chuckled through his beard. "Communists are square, man. They wear collars and ties—just like you!"

Square or not, the Communists are past masters in the art of mob manipulation. They have had 60 years experience of organizing peasant and worker uprisings around the world.

II

"Fronts are things of the past—we don't need them," said Gus Hall, secretary of the Communist party, U.S.A.

He was right. No operation of subversive forces in this country has been more bold, direct or blatant than the Communist takeover of the youth protest movement.

"We've got the DuBois Clubs, the Student Non-Violent Coordinating Committee, the Students for a Democratic Society," Hall boasted. "We have them going for us and they are not fronts in the usual sense of the word."

He could have listed several more.

The Communists have made great headway since 1961 when they started their plan to capitalize on the energies, resourcefulness, idealism and inexperience of young American hotheads.

On Jan. 20, 1961, Hall told his national committee: "The party must give much higher priority for the work among youth in all fields of endeavor."

A national organizing committee was set up to form a national network of dissident youth groups, tying in the Marxist and socialist-oriented groups that already were springing up.

Contact was made with groups that were not, like SLATE and Advance, already Communist fronts. The idea was to give them every encouragement and help to feed them with propaganda and, where they showed promise, to supply them with more funds.

Where local leaders were not considered active or militant enough, trained leaders were dispatched to the area. Their job was to build up the group by recruitment among the rootless intellectuals and loudmouthed malcontents, to make more impact on the community and stir up more resentment.

Liberal movements, calling themselves non-Communist or even anti-Communist, were also marked for infiltration. While concealing his Communist connections, the agent was to exploit existing grievances, arouse members to protest other "wrongs," and use his own persuasive personality either to be elected or eventually to take over as spokesman for the group. Activities thereafter were to be directed along channels that served the ends of the party.

College campuses were particularly fertile soil. Fidel Castro's victory in Cuba in 1959 had shown what could be achieved by a small group of young, dedicated followers.

Castro's deeds had stirred the imagination of American students already touched with revolutionary fever. They were ripe for indoctrination by Communist, pro-Communist and liberal professors. There were plenty of these around ready to talk about the "evils" and "injustices" of imperialism, capitalism and the American system, and the plight of oppressed peoples around the world.

Back-up was provided from outside by Communist party functionaries, including Hall himself, making speaking tours of the campuses.

Other vehicles of indoctrination were open forums, rallies and teach-ins. The teach-ins were a technique developed from the earlier Communist front "study group" to reach larger audiences.

Dressed up to look like fair debate, the "teach-in" was in fact carefully planned, timed and supervised by specially picked "discussion leaders" to give the organizers the advantage over the invited opposing speakers. Planted strategically about the hall were hecklers armed with prepared questions and statements, versed in the art of stifling the opposition and swaying an audience.

It also was no longer necessary to confine activities to the old secret Communist "cells." Radical students and non-student radicals were enlisted to organize college chapters of new national organizations formed under various banners—civil rights, "fair play for Cuba," "end the war in Vietnam," "stop the draft," "academic freedom"—everything from free speech to free sex.

One of the first, and most radical, was the Progressive Labor Movement, formed in 1962 by two long-time Communists who wanted action according to the teachings of Red Chinese leader Mao Tse-tung.

This movement organized student trips to Cuba, arranged karate classes and established arms caches in the New York area. Mortimer Scheer, a former member of the New York State Committee of the Communist party, later founded Progressive Labor's West Coast chapter in San Francisco. He was active in the Free Speech Movement and the Vietnam Day Committee at the University of California campus at Berkeley and since has been busy at most of the big Berkeley demonstrations.

West Coast organizer for the Progressive Labor group today is Steve Cherkoss, who was assigned by the VDC to head the anti-draft committee. He also led anti-draft demonstrations at Berkeley High School and at Garfield Junior High in Berkeley, where he recruited 12- and 13-year-olds for a Junior Vietnam Day Committee.

The Students for a Democratic Society was the new name given to the student affiliate of the socialist League for Industrial Democracy. Although SDS originally repudiated communism as an authoritarian system and excluded Communists from its membership, Communist agents sat in on meetings and coached organizers almost from the start.

As a result, the 1965 SDS convention repealed a constitutional stipulation barring Communists from membership. Subsequently, Communist party leaders quietly told members they "could work through SDS." Today they control several chapters.

By mid-1968, SDS claimed to have 6,300 dues-paying members with another 35,000 unregistered participants in 250 chapters across the country, all under the direction of SDS headquarters in Chicago.

SDS members now openly embrace the Red cause, wave Viet Cong flags, display portraits of Marx and Mao, denounce "capitalist exploiters" and "the Al Capones who run this country" and shout slogans like, "Lenin won, Castro won, and we will win too!" They have been in the thick of the disruption and violence that has exploded on campuses from Berkeley to Columbia.

The latest SDS statement, appearing in one of the underground student papers which serve as organs of Communist propaganda, says: "The notion that we must remain simply 'an anti-imperialist student organization' is no longer viable. The nature of our

struggle is such that it necessitates an organization that is made up of youth and not just students, and that these youth become class conscious. This means that our struggle must be integrated into the struggles of the working people."

SDS organizers are told that they should "direct the focus of their energies to organizing on campuses of working-class colleges, community schools, trade schools and technical schools as well as high schools and junior colleges."

Following SDS came the W.E.B. DuBois Clubs, named for the founder of the National Association for the Advancement of Colored People. DuBois joined the Communist party at the age of 93. He died in Ghana.

The first club was established at the University of Wisconsin in 1964. One of the founders was Eugene Dennis Jr., son of a former national secretary of the party. Another was Bettina Aptheker, daughter of Herbert Aptheker, the party's leading theoretician.

Other chapters quickly sprang up across the country. The UC Berkeley chapter was one of the prime movers behind the 1964 Berkeley riots.

By May, 1965, the Communists were boasting openly, in their party newspaper, of other DuBois achievements. They said: "The DuBois Club of New York, a socialist youth organization, is proud to say that, along with hundreds of others on campuses and in communities throughout the country, have sponsored teach-ins, sit-ins, rallies, marches and the huge demonstration of over 25,000 Americans in Washington, D.C., last April 17 to protest the war in Vietnam."

Some party members originally had suggested that a major effort should be made to bring all student radicals together inside a single national organization. The wily, more experienced leaders knew this would not work.

"The kids are too erratic to sustain any popular front," they said. "They're unpredictable and they go from one cause to another. Better to let them choose their own labels, while we do the prompting from behind the scenes."

Local organizers—dedicated volunteers as well as paid, full-time agents—worked to build up cooperation between those students supporting different causes. They arranged for the distribution and exchange of literature appropriately sympathetic to the other's complaints, suggested they share meeting places and other facilities as well as some of the functions such as handbill distribution and fund-collecting.

Thus, students who originally were interested mainly in civil rights, or a greater say in domestic university matters, were conned into demonstrating, marching and rioting in common cause with others protesting everything from "capitalistic exploitation" to the draft.

Said Inspector Tom Fitzpatrick, director of the San Francisco Police Department's intelligence unit:

"It is no mere coincidence that most of the leaders in recent demonstrations either are or were members of the Communist party or some revolutionary organization.

"Nor is it without significance that the pattern of agitation and action neatly conforms to procedures carried out by Communists or revolutionaries elsewhere and at other times."

III

For all that has been said about the impetuousness of youth and the so-called "generation revolt," few campus riots are spontaneous. Most are the result of careful planning and organization.

Communists call it "mob manipulation." They have had long practice at it. About the only new method they have introduced is the use of the two-way radio for the ringleaders to keep in touch with each other.

The operation is carried out in six stages:

Stage 1: Infiltration of any group already protesting some grievance. Agents also are moved into strategic position where they can aggravate some real or imagined wrong and form a new protest group.

Stage 2: Meetings are arranged, on or off campus, to discuss an issue and what should be done about it. Small contributions are sought to help the cause. Attention is drawn to some article in one of the underground student newspapers that carry Red propaganda which "happens to deal with this very subject." Volunteers are enlisted to distribute leaflets and posters.

Stage 3: Bigger, public meetings are organized; rallies and forums are held to call wider attention to the grievance. Other "injustices" are aired and the charge made that they are all the result of "exploitation and oppression."

Supporting speakers are invited from outside. Their Communist connections are not advertised. The word "Communist" is generally avoided.

Allusions are made rather to such universal aspirations as "freedom," "peace," "civil liberties" or—a sure winner on campuses—"students' rights."

Neither is it made apparent, at least not in the early stages, that there is any connection or cooperation with other radical groups parading under different banners but using similar slogans.

The aim is to draw sympathy, break down trust in this society's established traditions and ways of keeping order, appeal to malcontents and restive youths eager to join in any defiance of authority.

If such agitation succeeds in recruiting more adherents to the cause and building up the hard-core membership, so much the better. The main intention, however, is to stir up as much discontent as possible and win enough sympathizers to stage an impressive demonstration.

It is also at this stage that support is enlisted from liberal faculty members. Some professors already are party members. A lucid professor who is popular with students can be of enormous help to the cause and add dignity to the proceedings.

Stage 4: Matters are forced to a head by getting members and sympathizers to agree on a list of demands to be presented to the university authorities. They may be demands for changes in campus rules, better cafeteria food, more black admissions or a stop to on-campus recruiting by industrial firms contributing to the war effort. It does not really matter, so long as it has the support of several dissident groups and discomfits the authorities.

If the authorities yield, the organizers prepare new demands. The strategy is to keep adding issues until the authorities call a demand impossible and refuse to yield.

Stage 5: The issue is dramatized by calling a mass meeting or demonstration and appealing for active support from other groups.

A ringleader climbs on the stand and makes an impassioned but well-prepared speech about "our just rights" and "the hidebound bullies who are trying to deny them."

The stand is yielded to others who back up the main speaker. They also introduce wider issues like "civil liberties" and the "unjust war in Vietnam" to convey the impression that these are all connected and all due to the same hateful cause—"capitalist exploitation."

University authorities are represented as "hired lackeys of the system," "stooges of the military-industrial complex," upholders of racism and the real enemies of truth and justice.

Anyone who tries to speak in opposition is lumped with them.

An emotional frenzy is worked up by contrasting hate words with rousing slogans like "freedom now," "we shall overcome," "let's show 'em," and "let's march."

Chanted repeatedly to the accompaniment of waving banners, these have an effect similar to the repeated suggestions at a hypnosis session.

Stage 6: This is the direct confrontation. It calls for violation of campus rules or civil laws to "force the issue" and to challenge the authorities to take disciplinary action.

Students who sympathize with the dissidents but who don't go along with violence by now have been drowned out. Anyone who has the courage to stand up and call for "further negotiations" is ridiculed and shouted down.

Faced with incidents which escalate from strikes and sit-ins to outright assault on college buildings, the authorities finally must choose between yielding to "student power" or calling in the police.

The riot organizers prefer the latter. The appearance of police on campus—even to many who have not swallowed all the incessant Communist propaganda—is seen as the ultimate crime that a university administration can commit. It stirs up a heady feeling of revulsion against these ultimate symbols of authority and of sympathy for the demonstrators.

"Police brutality" and "pigs" are terms that have been used by Communists in other riots long before police ever appeared on U.S. campuses. It is taken up by other students as policemen, goaded by obscene insults and flying bricks and challenges to use their nightsticks, try to quell what has by now become a full-scale riot.

The riot organizers also welcome television cameras, especially if one can give a close-up of a policeman standing over a student with a bloodied head. It is good propaganda and costs nothing.

The ringleaders are not necessarily the riot manipulators. These are less obtrusive. They direct operations, keeping in touch with each other by means of hand signals, runners and two-way radio.

"The ability to manipulate people through violence and the mass media has never been greater, the potential for us radicals never more exciting than now," proclaimed a speaker at a meeting of the Students for a Democratic Society, a Communist-backed organization which has been behind many college riots.

The SDS and other radical groups under Communist direction have worked up demonstrations and riots at San Francisco State College, at the Universities of California, Texas, Georgia, Chicago, Wisconsin, Princeton, Brandeis, Howard and many other colleges. They also have organized many riots off campus.

In the name of defending such issues as "free speech," "better cafeteria food," allowing girls in men's dormitories, draft deferment, no on-campus recruiting, more black studies, etc., they have launched rampages of looting, brawling and arson. Carrying the red flag of Communist revolution and the black flag of anarchy, they have stormed buildings, held people captive, beaten up opponents, erected barricades and fought pitched battles with the police, deploying radio-directed students as shock troops.

The Columbia riot was directed by an SDS "high command" which set up headquarters in one of the occupied college buildings, and coordinated activities through a network of 40 walkie-talkies, telephones and runners. The same kind of organization has been observed at Berkeley and elsewhere.

IV

"University reform can only be a means to revolution, never a revolutionary end in itself. Once you secure the campus you have just begun."

So asserts Lee Felsenstein, who calls himself "military editor" of the Berkeley Barb.

The Barb is one of nearly 50 underground newspapers circulating in the United States and sold on many campuses. They are joined

in a syndicate, which includes others in Canada, Latin America and Europe.

They freely use each other's material. Much of it is virtually indistinguishable in tone from the anti-American outpourings from Moscow, Peking and Havana.

Such publications serve not only as organs of Red propaganda; they also are used to transmit directives to party members and others working for the same cause. Detailed subversive tactics are worked out locally at secret meetings, but there is no secrecy about the over-all mission and the objectives.

Under the heading "Commune-ism Can Win" the Barb piece outlines a plan for setting up "revolutionary communes, each consisting of from 10 to 30 people who live near each other."

Such communes, Felsenstein says could form a "decentralized revolutionary organization which is so vital for sustained militancy. It would be a substantial and yet invisible organization, capable of explosive activity of dormancy as the situation demanded.

Since several groups of this nature are already known—at least by the Federal Bureau of Investigation—to be in existence, such articles can only have the purpose of building up the network.

"Some of us should move into factories and shops as well as into working class communities," the Communist-backed Students for a Democratic Society proclaims through the underground press. "We should move into the liberation struggle now being fought inside the armed forces and take an active part."

Educators used to shrug off the SDS as just an unruly bunch of impetuous youngsters until a congressional report last year charged it with having given "open support to guerrilla warfare in the United States."

The SDS makes no bones about it. "We're working to build a guerrilla force in an urban environment," it states. "We're actively organizing sedition," boasted national secretary Greg Calvert.

Recruiting for revolution reaches down to high schools, junior high and even lower.

One SDS pamphlet urges young school radicals to exploit tensions and potentialities existing in the American high school setup. Suggested ways for creating disorder at the junior level include starting trash can fires, setting off false fire alarms, organizing mass protests on such issues as dress regulations, attendance, even education itself.

"We have much to learn from SLATE, the Berkeley campus political movement," the SDS lectures its up-and-coming agitators. SLATE, an early Communist front organization, helped structure the Free Speech Movement which disrupted Berkeley in 1964.

At San Francisco State College, student rebels were given specific instructions on how to make bigger and better Molotov cocktails and how to make use of sodium, potassium or white phosphorus, which could be obtained from the college's chemistry department.

Another statement put out by the SDS during the San Francisco State trouble was headed, "The Need to Fight the Cops." It exhorted:

"The weapon that the rulers always fall back on when others fail is their armed might. In this case it was the police forces from San Francisco and surrounding counties. (President S. I.) Hayakawa thought if he used enough police terror we would quit and give up the strike, but instead of rolling over and playing dead we fought back. We met their clubs with Mace and rocks and bottles. Several plainclothesmen were beaten up when they were discovered. This was a big step forward for many of the white students. They overcame their awe and fear of the pigs and helped defeat every attempt to smash the strike."

How are radicals who help the Reds financed?

Said Inspector Tom Fitzpatrick, director of San Francisco Police Department's intelligence unit: "We know they take up collections, charge dues or solicit contributions from well-heeled fellow travelers, of whom there are many. But all these sources put together couldn't come up with the money it takes to run their operations.

"Some of them, for instance, have been able to commute between Havana, Hanoi and even Moscow, like well-to-do globetrotters, not to speak of frequent transcontinental trips."

Proceeds from the sales of underground publications, plus profits from the salacious commercial ads and personal "want" columns, make up only a small part of the revenue to finance the youth subversion program.

Membership dues to various radical groups are used to subsidize the propaganda campaign. For every paid, full-time worker there are dozens of volunteers—canvassing, fundraising or busy in makeshift offices near the campus, cranking out mimeographed sheets, letters and notices of forthcoming meetings.

In some cases where radicals control the student body, part of the student body fees are channeled off to leftist causes. The California Education Code specifically prohibits grants of students funds (which are compulsory college fees) to racist organizations. This may keep out Ku-Kluxers all right but not their opposite numbers.

Outraged students at San Francisco State College sent Gov. Reagan and Atty. Gen. Thomas Lynch a letter showing how these fees had provided money for a number of radical groups including the Third World Liberation Front ($15,339) and the Black Students Union ($22,073). The attorney general's investigation of the San Francisco State budget revealed that one speaker had quietly returned a $400 student government speaking fee to the Black Students Union and that an officer of the Black Students Union had bought a sniper rifle with a telescopic sight with a $150 student government check.

Public money also is misdirected into Communist causes by New Left students and others who have worked their way into influential positions on various off-campus projects financed under the War on Poverty. Local office facilities have been used for printing and distributing propaganda.

An investigation by an Office of Economic Opportunity auditing team showed that over $6,000 of federal funds had been expended in promoting various rallies and demonstrations in San Francisco, events having nothing whatsoever to do with the War on Poverty.

Summer youth camps have also been occasions for Red indoctrination. A San Francisco mother complained that her son returned from one weekend outing laden with Communist propaganda literature. He told of having lectures on Marxism and Maoism.

Investigators found that chartered buses were taking 60 to 70 youngsters at a time from around that area to a camp owned and operated by Willie and Else Beltran, longtime functionaries of the Communist Party. Manager was Virginia Proctor, wife of Roscoe Proctor, righthand man of Mickie Lima, who heads the Northern California branch of the Communist Party U.S.A. Buses, lodging and other costs were paid for out of War on Poverty funds.

Other so-called "youth leaders," some carrying the title of "reverend" but identified as working for Communists, have participated in similar projects.

Other big money raisers are admission fees to private pornographic plays and movies which have lately been making the rounds of more and more campuses. The proceeds from sales of pornographic books and drugs, as well as from organized looting and robbery, are documented acording to cases on file with the FBI.

Also on file is evidence of funds supplied from Communist sources abroad. The Progressive Labor Party obtained $43,000 in Peking, money that had been changed into U.S. currency. It was picked up at the Mexican City National Bank in Mexico City by a girl University of California student, who brought it to Berkeley and, according to House Committee investigation, delivered it to PLP leaders Mortimer Scheer and Lee Coe.

Testimony was given in Washington a few months ago by breakaway members of the PLP and Trotskyite Social Workers Party.

They told how activity had been financed by money sent from Peking by way of Havana. It was brought into the United States in the diplomatic pouches of the United Nations Mission from Cuba. Agents picked up the briefcases in New York.

The nationwide network of subversion is made up of oldtime "cells"—groups meeting in private houses or "clubs"—front establishments like private schools, summer camps and hotels which are really training and indoctrinating schools—plus many groups openly calling themselves Communist, pro-Communist, leftist or New Left.

The main "knots" in the network are New York in the East, Chicago in the interior and San Francisco in the West.

One of San Francisco's earliest Communist front establishments was the California Labor School. After the U.S. Justice Department put it on the subversive list as a Communist indoctrination center and closed it down, organizers moved out into other subversive activities, where they are still busy today, some of them on college campuses.

West Coast source of much Red propaganda material is 55 Colton Street, one of a shabby, broken-down block of buildings with closed doors and shuttered windows off San Francisco's Market Street. It is headquarters for the Third World Liberation Front and the Vietnam Day Committee, and command post of Asher Harar, reportedly the No. 3 Trotskyite in the United States and No. 1 man west of the Mississippi River. It also is the hangout of the Black Panthers and other revolutionary groups.

There the office mimeograph machines run late turning out anti-police, anti-establishment, pro-revolutionary propaganda.

One of the directives that went out coast to coast said: "If you are working for a defense plant engaged in making munitions, you want to see that that munition proves to be a dud when it gets there. If you are working for a food plant making K ration, do whatever you can to contaminate that food so it will be nonedible when it gets there."

San Francisco was chosen as the launching place for subversion in the West because of its cosmopolitan population, the climate of liberalism that already existed, and, chiefly, because it was also the home of one of the greatest, most influential centers of learning in the world—the Berkeley campus of the University of California.

V

The wave of disorder and violence that has swept U.S. universities and colleges was set in motion at the Berkeley campus of the University of California in 1964.

Few people are aware of the full significance of the "Battle of Berkeley." It was no spontaneous student uprising. It was planned and organized by Communists, with the help of the so-called "New Left" and others committed to the destruction of this country's system of government.

They won an historic victory. Berkeley became the beachhead from which to try to launch a revolution across the nation's campuses.

Today's Communists or pro-Communists control some of the positions of authority within the faculty and administrative offices. They dominate at least 10 important departments of the university.

The result is "a great and continuous barrage of propaganda at Berkeley denouncing this nation and its foreign policies. It has nothing to do with a youth movement. It is the effect of the subversion of youth."

The words are those of a Berkeley professor concerned enough to utter public warning of what has happened and is happening there. He is Dr. Hardin B. Jones, no wild-eyed Red-baiting fanatic.

Professor of medical physics, assistant director of the Donner Laboratory and an internationally respected scientist, he is a tall, dignified, quiet-mannered man with more than 30 years' close contact with Berkeley, beginning when he was a student.

"No one any longer speaks out effectively in the faculty or administration at Berkeley for the important concepts basic to our free society or to retain the excellences of our past social achievements, even though such identified excellences are usually regarded as the core material for an education," said Jones.

Several professors, including some who had considered themselves liberal, have left Berkeley in disgust.

Sociology Prof. William Peterson, who left to become research professor at the Institute of Human Sciences, Boston College, said:

"The University of California, still the nation's greatest public institution of higher learning, is in rapid disintegration. The university has a dark prospect; and the reason is that there has been no one with the will, intelligence and courage to administer it."

Dr. Lewis S. Feuer, who moved on to become sociology professor at the University of Toronto, said:

"Berkeley has become a symbol for the world. To many Americans, it stands for studentry in senseless rebellion; to the Communist government of North Vietnam it is a faithful ally whose demonstrations against the United States government are the most valued propaganda."

The greater political awareness of the modern generation is widely acknowledged. Its members feel critical of society, condemning poverty, racism and war as weaknesses which they are impatient to correct. Many are ready to protest and demonstrate without Communist coaxing.

A small but determined group had been working to undermine the university's academic structure and "politicize" it long before the 1964 outburst over "free speech."

In 1957, a small student coalition called SLATE sought to gain the political advantage of claiming to utter their extremist political views in the name of the 20,000 registered students.

Its platform was that the student government "should take stands on national and international issues," contrary to the principle embodied in the university's charter that the university and its subdivisions should be "free from political influences."

SLATE was defeated. After repeated defiance of authority it became an off-campus organization, continuing to press radical demands. Communists held leading positions.

In the summer of 1964, SLATE issued a manifesto calling for revolution on the campus to match and support political revolution in the world. It urged students "to begin an open, fierce and thoroughgoing rebellion on this campus . . . start a program of agitation, petitioning, rallies, etc., in which the final resort will be to civil disobedience."

It exhorted them to "organize and split this campus wide open! If such a revolt were conducted with unrelenting toughness and courage, it could spread to other campuses across the country."

The SLATE slogans became the battle cry of the Free Speech Movement, whose organizers included the Red Functionaries of SLATE.

For all the Free Speech Movement protesting, free speech was never a real issue. As a Berkeley professor, Nathan Glazer, put it:

"Berkeley was one of the few places in the country, I imagine, where in 1964 (pre-FSM) one could hear a public debate between the supporters of Nikita Khrushchev and Mao Tse-tung on the Sino-Soviet dispute. There were organized student groups behind both positions."

It was not free speech, but freedom to organize political action and collect funds on campus that was the immediate issue in the dispute that broke out two weeks after the SLATE manifesto was distributed to students.

FSM victory depended upon a hard core of about 200 members of the faculty who were in sympathy with the movement from the beginning and whose leaders were in touch with FSM leaders.

Some radical professors abused their position of academic authority to help the FSM leaders. They called off classes to make the student strike more effective and spoke in support of the strikers.

"I am aware," said Jones, "that activists on the faculty at Berkeley regard the Free Speech Movement and its political offspring as the greatest event ever in American education. With no de facto restraints on speech, the major characteristic of Berkeley became that of a political war, including violence, against American and Western society."

Though most university students might try to ignore or reject indoctrination aimed at the unqualified denial of the established principles of American society, there are few who could spend four or more years on campus without being affected by the deluge of propaganda.

Gradually the smaller political cliques that had been given freedom to campaign on campus formed themselves into larger, more cohesive groups which organized and led a series of activities on and off campus—stopping troop trains, encouraging defiance of the Selective Service system, handing out pamphlets on "How to Beat the Draft," upholding "filthy speech" and "free sex."

Warnings by alarmed professors and other concerned citizens that the Berkeley situation would be the precursor of other university eruptions were soon justified.

According to Prof. John R. Searle, who supported the FSM at Berkeley, "Many college administrations in America don't yet seem to perceive that they are all in this together.

"Like buffaloes being shot, they look on with interest when another of their number goes down, without seriously thinking that they may be next."

VI

Beneath the flood of revolutionary propaganda and exhortations to violence aimed at today's youth is an undercurrent of filth which goes far deeper than most Americans realize.

For parents to be shocked at youthful pranks is nothing new.

What is sinister, however, about the present student preoccupation with sex, drugs and perversion is that, unlike "panty raids" and other student frolics, it is largely the result of planning and organization.

It is the most sinister aspect of the Red youth subversion program—one part of the East-West psychological warfare which is practically one-sided, because little is being done on this side to combat it.

The discovery of the "conditioned reflex" by the Russian physiologist Ivan Pavlov had an important influence on all of Russian biological and social sciences. Few Westerners are aware of how widely Communists have used the principle to condition political behavior.

"American scientists have tended to neglect this area of study," said Dr. Hardin B. Jones, professor of medical physics and physiology and assistant director of the Donner Laboratory at the University of California at Berkeley. "American politicians have made comparatively little use of its capabilities because, until now, the politics of this country were very stable."

On the other hand, Jones said, "the leaders of world communism have relied heavily on the social methodology developed from Pavlov's principle of conditioning.

"It is a way in which satisfaction of animalistic human needs such as food, affection, discipline and sexual activities can be controlled so as to condition a person to actions and beliefs without intellectual evaluation."

Communists and radical Socialists used the principle for political purposes by seeking to subvert German youth movements in the 1930s. The animalistic mob culture they helped develop was taken over by Adolf Hitler. Through mass meetings, social activities and organized sexual contacts, the Hitler Youth was turned into a political army—unthinking, obedient, conditioned to give prompt reflex responses such as Pavlov studied. Elite members of the Nazi SS were introduced to abnormal sexual activities as part of the conditioning process to break down their attachment to traditional moral values.

Indoctrination through perversion came later to the United States as a weapon in the cold war. Young people, particularly university students, were the main targets. This came at the same time the universities were marked for political subversion and revolution.

The Vietnam Day Committee, also directed by Communists, followed by sponsoring on-campus plays which mixed politics with pornography. These and other indecent shows and activities to which students were invited helped as fund raisers for antiwar, antidraft demonstrations, civil rights marches and related projects.

Four-letter vulgarities have become the stock-in-trade of campus radicals.

So have the obscene badges and open enticements of "sex" clubs and "sexual freedom" groups. So have the lurid language in the "underground" and many student newspapers which mix anti-American propaganda with titillating articles and pictures about drug-taking, sex and sex perversion. There also are columns of personal ads which leave nobody in doubt as to the prurient interests of the advertisers. These are but surface signs of the poison to which young minds today are being exposed.

Portraits of Lenin, Mao, Castro or Che Guevara, "Pig Brutality" and other "anti-imperialist" wall posters are an important part of the "scene." So are psychedelic art containing pornographic symbols, and "way out" music with its frenzied rhythmic beat, shrieking, hysterical voices and frequently lewd lyrics.

Veteran investigators into the underworld of dope and vice have a hard time holding onto their stomachs, as well as their sanity, when they look into some of the practices to which novices of the so-called New Left are introduced.

It goes far beyond "making love, not war." The narcotics in use today make the old dope dens look like dreary joss houses.

Neither are obscenity and pornography confined to the backroom "pads" of bearded, long-haired dirty-toed boys and their radical girl and boy-girl friends.

They are introduced into the theater and made part of student courses of instruction.

Performances for which "sick" might be considered too mild a description, have made the rounds of campuses. Either they are condoned by the "liberal" section of the faculty or are not objected to for fear of infringing rights of free speech. Some professors have even helped in publicizing and promoting them.

The "heroes" of these "dramas" are usually depicted as Socialist "revolutionaries." The villains are "capitalist pigs." Actors, sometimes naked or near-naked, portray characters in lustful, sadistic, brutish attitudes.

The coupling with political propaganda of blasphemous, sacriligious and vulgar sexual terms used with regard to religious themes

and family relationships is a deadly weapon, blatantly used to demoralize and destroy.

Another part of the same weapon is "sensitivity training," now being promoted on a massive scale in the United States, including on some campuses, notably the University of California.

The training consists of creating physical awareness of other persons. It is highly related to such physical contacts as between mother and infant and sexual feelings between persons. The idea is to become aware of the other person through touch and other forms of direct contact. Classes often are conducted in the nude.

"Sensitivity training," Jones said "is a powerful form of Pavlovian conditioning by which sexual-emotional types of response can be substituted for intellectual consideration of any proposition common to the group, developing a surge of animalistic mob response."

This conditioning, he stresses, has been developed "by the Communoid forces, who apply these techniques to control of group behavior."

Many of those interested in sensitivity training and its "group dynamics" are well-intentioned. They believe these emotional responses can be applied to increase a feeling of brotherly love in the antiwar movement and to generate similar feelings of affection and admiration between whites and blacks.

Jones warns, however: "To the extent we begin to be influenced by animalistic tendencies and mob psychology, we certainly lose the structure of a society based on solving its problems rationally."

FAMILY PLANNING CLINICS IN LOS ANGELES, CALIF.

HON. THOMAS M. REES

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1969

Mr. REES. Mr. Speaker, one of the major problems facing our poor today is their inability to control the size of their families. This results in inflicting not only further financial burden but often inadequate care for the children.

There are, however, projects underway to assist mothers in family planning. An example of this was brought to my attention in an article written in the Los Angeles Times on February 7, 1969. Several family planning clinics, funded by the Office of Economic Opportunity, are operating in the poverty areas of Los Angeles. These clinics provide advice and free medical attention to the women in the area. They succeed in educating the residents in birth control methods and hygienic practices. Further, they aid in curing and preventing disease and abortions which are both costly and dangerous.

This is one step in the road to releasing the bondages of poverty for the poor and uneducated of this country, and I would like to insert the article in the RECORD at this time for the information of my colleagues.

The place looks kind of old. But for the women who go there it offers a new future and just maybe a chance to step out of the poverty pocket or at least eliminate some of its rushing blows.

It is the newly opened, freshly funded Family Planning Clinic at Harbor General Hospital.

Funded by the Federal Office of Economic Opportunity, it is operated by the Los Angeles Regional Family Planning Council, which runs several other clinics in the Los Angeles area.

And to its doors come women of all ages, usually in their late 20s or early 30s, a cultural mix of brown, black and white. Many have as many as seven or eight children, all looking for the same thing, knowledge and help.

Many are desperate. Take the case of Rosa, a Mexican-American, mother of eight, who didn't know there was such a thing as family planning. On learning she was pregnant for the ninth time, she resorted to a $350 abortion she could ill afford under primitive medical conditions. Then she ended up in a county hospital when complications set in.

Or the case of Norma, a Negro from Compton with five children who experienced complications from a birth control pill. Not knowing where to go for help, she ended up alone and bleeding all night in an emergency room because she couldn't reach a doctor for medical care and advice.

At the Family Planning Clinic, the only prerequisite is that the service is limited to people who can't afford a private physician.

Otherwise, the most complete care of its type for any free clinic in Southern California is provided.

The clinic operates 65 hours a week, making its services available to almost any woman under any special circumstances.

Hours are 9 a.m. to 9 p.m. Mondays through Fridays and 10 a.m. to 3 p.m. on Saturdays.

No appointment is necessary, there are no lengthy waits, no tedious financial screenings.

Instead they accept a statement of need. Then the patient is whisked into a pleasant decorated pale blue consulting room, where all methods of contraception—intra-uterine devices ("the loop"), the pill, foam, diaphragms, etc.—are explained by a doctor or nurse.

The woman and her husband are then free to make their choice. If it is for a vasectomy or tuballigation, the case is referred to the hospital, thus giving a full range of care.

In addition, women are given a gynecological examination and a complete cancer screening—breast check, pap smear and culposcopy, a visual scan with a microscope of the cervex and vaginal areas to check for cell changes. If a cell looks bad, they do an instant biopsy.

CONTINUING CARE

And the care is continuing—revisits, consultations to see how the birth control device is working, pelvic examinations a minimum of once a year by a team of doctors headed by Dr. Daniel R. Mishell, head of the hospital's Ob-Gyn department, and including Drs. Duane E. Townsend, Sidney Wechsler and Jim Gardner.

For its task, the hospital is well located, placed in the middle of some of the worst poverty areas in the Southland—parts of Harbor City, Wilmington, Lawndale, Lomita, Compton, Carson and Artesia.

Many of the residents have less than eighth-grade education.

The facts speak for themselves.

Fact: Nine out of 10 poor women in Los Angeles had no access to birth control services until very recently.

Fact: Women in poverty have between two and seven or more children.

Fact: Educated middle-class women want and bear between two and four children.

Fact: The local infant mortality rate is as low as 10 per 1,000 in wealthier sections of the city. It is as high as 38 per 1,000 in extreme poverty pockets. The highest acceptable rate determined by the World Health Organization is 17 per 1,000.

Until now, the alternatives for expectant mothers from these areas have been limited. The abortion rates are alarmingly high. One out of five pregnancies, with the poor hazarding poor health care and high costs, is aborted.

MORE CLINICS

A partial answer is the founding of family planning clinics (more will open under the auspices of the Los Angeles Regional Family Planning Council), offering efficient, hygienic and total health service to a portion of the population long neglected.

The problems underlying such an undertaking are enormous. But the clinic hopes to overcome them in part through the services of Peggy Golden, educator and social worker.

She is dedicated to her cause and believes that, next to the issue of peace, overpopulation is the most significant problem of our time.

She goes to schools, to community agencies, to welfare agencies, to poverty agencies, the Neighborhood Youth Corps, the Department of Public Social Service—anyone and everyone directly connected to poverty—to tell about their service.

She also works with six specially trained women—two from Compton, two from the Long Beach Pact, two from the Parent Child Center in Harbor City—who go into neighborhoods and explain birth control.

EX-PROBATION OFFICER

She comes by her interest not only as the wife of an assistant dean of the UCLA School of Medicine, Dr. Joshua Golden, but as a former probation officer for Los Angeles and San Bernardino counties.

"That's when I saw first-hand what happens to children people don't want," she said.

"People in poverty are rightly incensed because they are weak and voiceless and feel they are being singled out because other people don't control their progeny.

"This is exactly what we're trying not to do. We're trying to offer them a complete medical service they've previously had no access to. We try to do everything for these women.

"They have to have faith they won't be harmed, or embarassed or that their fertility won't be interfered with.

"Many women don't know they have certain medical problems," she adds. "You live with a great deal more disease if you live in poverty.

"But when people are in stress, it doesn't matter what their ideologies are, they want the help."

Slowly and uncertainly women began to trickle into the clinic after it opened Nov. 4. Since then, the caseloads have doubled to 40 or more patients a week. But the facilities can service 10 times that many. That is the clinic's goal.

IN THE NATION: THE OLD MERRY-GO-ROUND

HON. ROBERT W. KASTENMEIER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1969

Mr. KASTENMEIER. Mr. Speaker, the war in Vietnam continues with new ferocity. American deaths from this war will soon surpass the total number of U.S. servicemen killed in the Korean conflict. The hopes for an end to the killing fostered by our bombing halt and the Paris negotiations have faded. The time for bold new initiatives from a new administration has all but passed. Instead of new voices and policies, we are hearing more of the same Vietnam rhetoric. I strongly recommend for my col-

leagues' consideration the following analysis by Tom Wicker in the New York Times of the factors contributing to the present administration's failure to take any meaningful action at this time to end the war.

IN THE NATION: THE OLD MERRY-GO-ROUND

(By Tom Wicker)

WASHINGTON, March 19—President Nixon has elaborated a sort of chicken-or-egg argument that, for a number of months past, American forces have not been conducting an offensive in Vietnam—just spoiling operations to blunt a Communist offensive they knew was coming. The Communist offensive came anyway, and now the allies have mounted a counter-offensive. This is the same old game of lethal leap-frog.

Mr. Nixon has also said that "in view of the current offensive on the part of the North Vietnamese and the Vietcong," there was no prospect of a reduction of American forces in South Vietnam. Secretary Laird, testifying before Congress, said that more money was necessary to prepare South Vietnamese to take over the fighting from Americans so that Americans could come home. This is the same old merry-go-round.

As for the Paris negotiations, the best information available here is that the kind of private talks that might produce substantive progress are not yet going on, although such talks may soon begin, and Mr. Nixon said Friday that "significant progress" was being made toward such a beginning.

This is a familiar and melancholy story; it is almost as if nothing had happened—no elections had been held last year, no change of Administrations had taken place, no profound public decision had been registered to take this country out of a dispiriting and divisive war that can neither be won nor justified—no more today than in November.

LIKE GRAVEN COMMITMENTS

So, it seems, the fighting must go on—although, to his credit, Mr. Nixon has not made the slightest move to renew the attack on North Vietnam itself. There is no prospect of withdrawing American troops; there has been on political initiative, and apparently none is being prepared; and the new Administration like the old stands by the Saigon Government and all the past American "commitments" as if they had been carved in stone and handed down from Mount Sinai.

Where are the fresh ideas and the new start—let alone any "plan" to end the war—so many Americans believed they were voting for? What has happened to the opportunities and maneuverability of new men unsullied by the conflicts and policies of the past? The answer from the high councils of this Administration is that it does not wish to give away the game. It is "locked in" to many positions. It has "commitments."

The reasons for this are not entirely ideological and geopolitical—although Mr. Nixon's fifteen-year record on Indo-China clearly shows him to be intellectually comfortable with the current stance of his Administration; nor are they all to be found in the pressures of the military-diplomatic bureaucracy which has so great a vested interest in vindicating its long, fruitless prosecution of this war.

THE PRESSURE IS OFF

In fact, these influences and whatever others are at work within the Administration are having their effect only because Mr. Nixon and his associates have decided that they are under no domestic political pressure to settle the war swiftly. They believe that President Johnson's withdrawal, the opening of the Paris talks, the suspension of the bombing of the North, the change of Administrations—that all of these pacified the great outpouring of public unrest and dissent that was the most striking phenomenon of 1968.

Mr. Nixon and other high officials are known to believe that not before the end of summer or perhaps even longer will domestic peace pressures become significant; and that in the interim they are free of any political necessity to take unilateral action to end the war, or to launch major new initiatives to that end.

So far, this estimate has no doubt been accurate. How long it will remain so is another question. Congressional doves are already restive. But whether it is next week or next autumn before the rallies and the demonstrations begin all over, before the picket lines form again wherever the President goes, before the whole angry and dangerous business of public confrontation is renewed, the Administration will wait that long only at great cost.

And that cost will include not only the lives, money and energies cruelly wasted in Vietnam; it will include also another corrosive demonstration of how dubiously if at all, the American "democratic" process works on questions of high policy. Even after voting twice in four years for Presidents who promised peace, must Americans once again go into the streets to get it?

THE EXCEEDINGLY THIRSTY COLORADO RIVER

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1969

Mr. HOSMER. Mr. Speaker, copies of U.S. News & World Report currently being received—dated March 31, 1969—contain an article datelined Yuma, Ariz., detailing the plight of the overworked Colorado River. It is a pity that with all the excess water in areas surrounding the Colorado River Basin, Congress was forced last year by the contumacy of the water heavy Pacific Northwest to ban for a period of 10 years any studies of importations into this water deficit basin from water surplus basins. This prohibition is both cruel and unnecessary, as even its perpetrators could admit. The article I have referred to substantiates what I have said. It follows:

AS FLOODS THREATEN IN UNITED STATES, THE COLORADO RUNS LOW

(NOTE.—Spring floods predicted for the Northern U.S. would be welcome in the Colorado River, the country's most overworked stream. Troubles are piling up along this waterway for the fast-growing Southwest, and there is little relief in sight.)

YUMA, ARIZ.—While people along the Mississippi and Missouri rivers are bracing for spring floods that may reach record proportions, people of the Southwest U.S. are pleading for more water in their river—the once-mighty Colorado.

The Colorado is the world's most overworked river. So completely does man control this stream that it leaves the U.S. here at Yuma as little more than a trickle.

Unless more water can be brought into the Southwest, this booming region that is a mainspring of the U.S. economy faces drastic change in the foreseeable future.

The heavy winter snows that now may melt to produce floods along some stretches of the Mississippi and Missouri rivers also promise more water for the Colorado River. Predicted spring runoff will be 6 per cent more than normal.

STILL NOT ENOUGH

But the Colorado could easily use double its normal flow to serve the future needs of seven Western States: California, Arizona, Nevada, New Mexico, Colorado, Wyoming and Utah.

The mouth of the Colorado River is at the Gulf of California, 110 miles downstream from Yuma. Its headwaters are 1,400 miles away in snow-covered mountains. Between these points, there are dams that enable man to turn the river off and on like a faucet.

These same dams so curb the river that it cannot flush itself of silt along lower reaches.

Use and reuse of the Colorado's waters as it flows to the sea have pushed its salt content above federal standards for drinking. Salt also is damaging crops grown on land irrigated by the Colorado in California and Arizona.

Finding water for new works authorized by Congress in 1968 will be a matter of robbing Peter to pay Paul.

More water for Arizona through the Central Arizona Project, authorized at a cost of more than 800 million dollars, will mean less for the teeming population of southern California. It may result, too, in shortages for projects approved for the Upper Basin States of Utah, Colorado and Wyoming.

OVERCONTROL?

Just how did the Colorado River, and the Southwest economy which it sustains in a major way, get into this predicament? The answer is in the story of how man, seeking to control the river for his use, appears to have succeeded too well.

It was Hoover Dam, completed in 1935, that first gave man a measure of control over the Colorado. Water stored in Lake Mead behind this dam in flood years could then be rationed out in dry years for downstream irrigation projects.

Today, as shown on the accompanying map, there are eight major dams on the Colorado and its tributaries. From these dams flow billions of kilowatt hours of electricity to sustain the Southwest's desert boom. That boom, without water and power from the Colorado River would collapse overnight.

DEPENDENT MILLIONS

In southern California, 10 million people depend on the Colorado for 80 per cent of their water supply. Upward of 10 million more are expected in this area by the turn of the century.

The Colorado also supplies irrigation water to more than 600,000 acres in southern California and another 170,000 acres on the Arizona side near Yuma.

Projects now under construction are to carry water from Colorado Basin reservoirs to the last-growing cities of Las Vegas, Salt Lake City and Albuquerque.

Denver and a string of smaller cities on the eastern slope of the Rocky Mountains draw water through the continental divide from headwaters of the Colorado. In this area, 720,000 acres of land are irrigated from the same source.

Hoover Dam and those farther upstream relieve the river of a heavy load of sediment. But when it leaves Davis Dam downstream from Hoover, the river picks up silt which plugs lower reaches and creates vast marshes. Dredging, begun in the early 1960s to clear the river channel, was stopped in 1968 when conservation and wildlife groups said draining of the marshes was destroying fish and wildlife.

Farther downstream, silt is threatening to overwhelm the diversion works at Imperial Dam, where water is drawn from the Colorado to irrigate the Imperial and Coachella valley projects.

BRACKISH FLOW

These irrigated lands also suffer from the increasing concentration of salt in the Colo-

rado's water, which is the result of overworking the river.

At its headwaters in the Rocky Mountains, the Colorado's water is clear and pure. But much of this high-quality water is diverted to the east slope of the Rockies. The rest courses on downstream, picking up salt and other minerals along the way.

Vast quantities of pure water are lost through evaporation in reservoirs. From Lake Mead, behind Hoover Dam, an average of 830,000 acre-feet of water is lost each year. From all reservoirs combined, according to the U.S. Bureau of Reclamation, evaporation loss in the years ahead will average 1.9 million acre-feet a year. That is more than 13 per cent of the river's average annual runoff of close to 14 million acre-feet.

An acre-foot of water, which is the amount that will cover one acre to a depth of 1 foot, will support five people for a year. Thus, the 1.9 million acre-feet lost to the air would supply the needs of 9.5 million people.

"WATER, WATER EVERYWHERE"

By the time the Colorado leaves Hoover Dam, its salt content is around 700 parts per million. At Lake Havasu, where water is drawn by aqueduct for the Los Angeles-San Diego areas, salt level is 800 parts per million. The limit for drinking water, set by the U.S. Public Health Service, is 500 parts per million. So the water has to be diluted with supplies from other sources.

At Imperial Dam, the salt level rises to 900 parts per million, high enough to damage some irrigated crops. Says Matt LaBrucherie, who farms 4,000 acres near El Centro, Calif:

"This salt is getting worse all the time. It's hard on vegetable crops, especially lettuce, carrots and onions. It's getting tougher to establish a stand of sugar beets. Alfalfa seems to be hurt by the salt, too."

On the Arizona side of the river, fields in the Wellton-Mohawk Irrigation District, northeast of Yuma, were in danger of becoming saturated with saline water. Pumps were installed to draw the water out and send it back to the Colorado River for delivery to Mexico. U.S. is committed by treaty to give Mexico 1.5 million acre-feet of water in the Colorado each year.

Then Mexican farmers became angry. They said water from diversion works at Morelos Dam was ruining their soil. Now much of the saline water pumped from Wellton-Mohawk fields has to be carried by drainage canal around Morelos Dam. This is virtually the only water that escapes man's use to trickle on down the Colorado River to the Gulf of California.

"LAY ANOTHER RIVER"

The way to rescue the overworked Colorado, says Arleigh B. West, regional director of the U.S. Bureau of Reclamation, is to "lay another river the same size down on top of it."

From headquarters in Boulder City, Nev., Mr. West directs the battle to keep silt and salt under control along the river from Hoover Dam to the Mexican border. He points out that reservoirs behind the eight major dams in the Colorado Basin could hold more than four times the rivers' average annual runoff of about 14 million acre-feet.

Doubling the Colorado's flow, says Mr. West, would bring its salt content down to a manageable level, deliver good-quality water to Mexico, permit dredging for silt control and enhance wildlife habitats.

It would also assure ample water for the Central Arizona Project, which otherwise will depend heavily on water salvaged from the marshes and from other sources. Some water experts say that unless a way is found to augment the Colorado's flow, the Arizona Project may not get enough water to pay its cost.

THE COLUMBIA NEXT?

The best way to "lay another river down" in the Colorado Basin, in the view of Southwestern Congressmen, would be to divert water from the Columbia River. But Congress has ruled that such a plan cannot even be studied for the next 10 years. Experience has shown that 30 years can elapse between the start of planning and the completion of major water projects.

Plans for desalting sea water and pumping it across California to Lake Mead have been studied. But without a major technological breakthrough, cost would be prohibitive. Cloud-seeding to increase snow and rainfall over the Colorado Basin is another possibility. Some water experts say it may be the solution to the Southwest's water crisis. Substantial success in a similar area of Iran, in the Mideast, has been reported.

A recent report, "Water and Choice in the Colorado Basin," by a committee of the National Academy of Sciences suggests that one way to handle the Southwestern water problem would be to take water from irrigation for municipal and industrial use.

Southwest officials say this not only would cause severe dislocations, but would require changing Western water law based on "first in use, first in right." This is seen as taking years of legislation and testing in courts.

So, as spring floods in the Northern U.S. roll to the sea, people of the Southwest will be watching and wishing that some of the water could be used to fill Colorado River reservoirs.

THE 96TH ANNIVERSARY OF THE ABOLITION OF SLAVERY IN PUERTO RICO

HON. FRANK ANNUNZIO

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1969

Mr. ANNUNZIO. Mr. Speaker, on March 22, the Puerto Ricans celebrated the 96th anniversary of the abolition of slavery in their country. It is my privilege today to congratulate them on their great achievement and to rejoice with them for throwing off the yoke of slavery and establishing a democratic government of the highest caliber—the Commonwealth of Puerto Rico.

Of all the evil traditions in the history of man, few exceed the degradation of chattel slavery, reducing human beings to the level of beasts. And of all the evil traditions none has done so much to impede the progress of civilization.

When Christopher Columbus discovered Puerto Rico, in 1493, the way was open to great and wonderful developments for all mankind. But only two decades later, slave traders began doing business with the Spanish authorities, stealing Africans from their homes, transporting them to Puerto Rico, and selling them, like so many oxen, to be used in behalf of the Spanish economy. The practice was continued for almost three centuries, to the detriment of millions who suffered from it and millions more who witnessed their suffering and did not act to stop it.

No less villainous nor more virtuous than the Spanish, the British and the Dutch authorities established the same terrible custom in North America, and the New World of such glowing promise became, overnight, a great, giant slave-pen, festering with broken hearts and broken dreams.

Meanwhile, however, abolitionist sentiment began to grow. The first abolitionist committee was formed in England in 1789, and the slave trade was suppressed by Denmark, Sweden, and Holland. Toussaint L'Overture outlawed slavery in Santo Domingo, in 1801, and when Napoleon sent an army to reverse that development, Toussaint destroyed the Army. In 1815, Portugal suppressed the slave trade in the north of Ecuador, and this action was rapidly followed by similar acts of other nations until slavery was made illegal in the British dominions in 1838. France declared against slavery in 1849, Holland in 1863, and the United States in 1865.

The common people of the world rejoiced at these developments. They recognized that slavery, by its very nature, was aristocratic, and greatly at odds with democratic institutions. They thrilled to the announcement of each new convert to the cause of human freedom. Yet they were puzzled and disturbed at the realization that in Puerto Rico the curse of human slavery lived on.

Finally succumbing to mass protests and entreaties on the part of people the world over, the Spanish authorities in 1893 abolished slavery in Puerto Rico, to the great delight and satisfaction of freedom-loving people everywhere.

I am particularly proud of the Puerto Ricans, for many of them reside in the Seventh Illinois Congressional District, which I have the privilege to represent, and consequently, I know firsthand of their many valuable contributions, both in Puerto Rico and in the United States, to the advancement of our mutual objectives.

Mr. Speaker, there are today in the free world no greater advocates of democratic traditions than the people of Puerto Rico. I take this occasion to express my best wishes for continuing prosperity to the people of that noble island community, which has risen from its chains to stand erect among the peoples of the Western World.

BRADY WILLIAM HERRING—A COURAGEOUS YOUNG MAN

HON. ALBERT W. WATSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1969

Mr. WATSON. Mr. Speaker, it has often been said of the Vietnam war that the only people in this country who really understand its greatest impact are those whose loved ones are stationed there. While this by no means is valid, it does seem to many that Vietnam is something to live with and, therefore, can be thrust from the mind much as a bad dream.

I know that people care about our men in Vietnam, and on numerous occasions in my State of South Carolina, it has been my privilege to witness spontaneous support for these great defenders of freedom. Often the outpouring is not in the

form of parades or speeches. Tragically, it can be the grief felt by an entire community when one of its own marches to war only never to return.

This was the case several months ago in West Columbia, S.C., which is located in my congressional district. The entire community was shocked to learn that one of its most outstanding young citizens, Brady William Herring, age 21, was killed in Vietnam.

Brady, the son of Mrs. Letha W. Herring, died in the same manner that he had lived—with unrelenting courage and devotion to others. In fact, this magnificent young American soldier was awarded the Air Medal, National Defense Service Medal, Vietnam Campaign Ribbon, and the Aircraft Crewman Badge before his death. Only recently, his dear mother received posthumous medals for Brady which included the Distinguished Flying Cross for heroism, Air Medal—first through 14th Oak Leaf Cluster, Purple Heart, and Good Conduct Medal.

Because Brady represented youth at its finest and because he dedicated his life so that others might live, I would like to include as a part of my remarks, the notice of his death which contains a beautiful and moving final letter to his mother, an article on the awarding of the posthumous medals, and a poem by Archibald McLeish which I think very appropriate, as follows:

BRADY HERRING KILLED IN VIETNAM

Spec. 4 Brady William Herring, 21, son of Mrs. Letha W. Herring, 1235 Guignard Ave., West Columbia, was killed September 16 in action in Vietnam, during his last week of service. He was scheduled to be separated from the army October 1.

Young Herring went overseas January 23 of this year following training at Fort Knox and Fort Hood. At Hood he was with the First Armored Division (Old Ironside).

On September 15, the day before his death, Spec. Herring wrote the following letter to his mother:

"DEAR MAMA: How is everyone back in South Carolina? All is well over here. I was down today to try and send some of my baggage home but the air force was closed. So, I will try again tomorrow.

"The one thing to do is not to expect me home in September. I hope to be there the first part of October. There is going to be a lot of personnel leaving around the same time, so, I plan for a delay at Travis for my clearance out of the army. There is already a hold up on the guys leaving Bien Hoa Air Base.

"I told you when I first came in that I would not stay in the army and I don't plan to. I came pretty close to it this past week, though. After you see what the Viet Cong have done to these little kids, and the kids still have faith in the United States and can smile, you know there is no way of pulling out.

"Everyone back home keeps yelling to pull out and let the Vietnamese fight for themselves. Well, they don't know what it is like over here, and probably never will, after you have seen a little kid with a grenade scar on his face, a young boy with a bullet hole through his wrist, or the unlucky one with a hand missing, or maybe the little baby with a .30 caliber bullet crease on his head. Just by doing the traveling I do, I can see the Vietnamese are thankful and in return are showing their gratitude. Maybe one of these days someone will wake up and realize just how necessary our being over here is. I could go on but I guess all this means very little to you.

"I was down at Vung Tau yesterday, I tried to look up Duane Johnson, but ran out of time just as I found his company. I doubt that I will ever be that way or have a chance again.

"I just got back from operations. Do you remember the Air Medal I received some time ago? Well, I have multiplied the time by sixteen. Instead of medals, I will just receive clusters to put on the original Air Medal. I have put in better than 500 hours of flying with 416 of them credited to combat hours of operation. That sure seems like a lot of hours for the last 4½ months.

"Well, I guess I will close for now. Be sure and say hello to everyone and send good news this way.

"Love,

"BRADY."

Funeral services were conducted for Spec. Herring September 30 from the Lutheran Church of the Transfiguration by the Rev. C. P. Fisher. Burial was in the Bethlehem Lutheran Churchyard at Irmo.

Survivors include his mother, the widow of Francis A. Herring; one brother, F. A. Herring, Jr., of West Columbia; the paternal grandmother, Mrs. W. L. Herring of Columbia; the maternal grandmother, Mrs. Eva L. Weed of Irmo; and the maternal great-grandfather, J. W. Lever of Irmo.

Spec. Herring was a lifelong resident of West Columbia and was graduated from Brookland-Cayce High School in 1965. He also completed a diesel mechanic's course at the Area Trade School in West Columbia.

HERRING HONORED POSTHUMOUSLY

Mrs. Letha Weed Herring recently received posthumous awards for her son Brady who was killed in action in Viet Nam in September 1968.

The awards included the Distinguished Flying Cross for heroism, Air Medal (First through Fourteenth Oak Leaf Clusters), Purple Heart and Good Conduct Medal.

Prior to his death, Brady had been awarded the Air Medal, National Defense Service Medal, Vietnam Service Medal, Vietnam Campaign Ribbon and the Aircraft Crewman Badge.

The official reasons for his receiving the Distinguished Flying Cross are as follows: For heroism while participating in aerial flight evidenced by voluntary actions above and beyond the call of duty; Specialist Four Herring distinguished himself by exceptionally valorous actions while flying as a door gunner on a UH–1D helicopter involved in an operation near Dau Tieng.

During the day, several elements of an allied airborne brigade had been inserted and one of the units made contact resulting in an American advisor being wounded. After inserting a replacement, his aircraft received enemy fire on departure. Every crew member was wounded and the radios and intercom were inoperable.

Although seriously wounded, Specialist Four Herring defended his side of the helicopter. While on final approach to Dau Tieng, the engine failed and a forced landing was executed. Due to the crew members serious wounds and the condition of the aircraft, complete control of the aircraft could not be maintained and the ship crashed and exploded on impact with the ground.

His heroism and willingness to risk his own life for his comrades was truly above and beyond the call of duty. His actions were in keeping with the highest traditions of the military service and reflect great credit upon himself, his unit, and the United States Army.

The Citation for the Air Medal (First through Fourteenth Oak Leaf Clusters) reads as follows: For distinguishing himself by meritorious achievement while participating in sustained aerial flight in support of combat ground forces of the Republic of Vietnam during the period May 8, 1968 to August 27, 1968.

During this time he actively participated in more than 25 aerial missions over hostile territory in support of counter-insurgency operations.

During all of these missions he displayed the highest order of air discipline and acted in accordance with the best traditions of the service. By his determination to accomplish his mission in spite of the hazards inherent in repeated aerial flights over hostile territory and by his outstanding degree of professionalism and devotion to duty, he has brought credit upon himself, his organization, and the military service.

Brady's father was the late Francis A. Herring.

THE YOUNG DEAD SOLDIERS

(By Archibald MacLeish)

The young dead soldiers do not speak.
Nevertheless they are heard in the still houses.
(Who has not heard them?)
They have a silence that speaks for them at night
And when the clock counts.
They say,
We were young. We have died. Remember us.
They say,
We have done what we could
But until it is finished it is not done.
They say,
We have given our lives
But until it is finished no one can know what our lives gave.
They say,
Our deaths are not ours,
They are yours,
They will mean what you make them.
They say,
Whether our lives and our deaths were for peace and a new hope
Or for nothing
We cannot say.
It is you who must say this.
They say,
We leave you our deaths.
Give them their meaning.
Give them an end to the war and a true peace,
Give them a victory that ends the war and a peace afterwards,
Give them their meaning.
We were young, they say.
We have died.
Remember us.

GRANT APTHORP: EAST CLEVELAND DYNAMO

HON. CHARLES A. VANIK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1969

Mr. VANIK. Mr. Speaker, it has just come to my attention that Mr. Grant Apthorp, the city manager of the city of East Cleveland in my congressional district, has announced his retirement. Mr. Apthorp has been among the very finest public officials I have ever known. Highly competent in city management, he has demonstrated a high degree of understanding and compassion for problems of the city.

During Mr. Apthorp's long and distinguished career of service, he has become known as Mr. East Cleveland. He provided exemplary leadership during a period of dynamic change. He has endeavored to provide plans for the decades ahead.

As a culmination of his great career, the city of East Cleveland recently unveiled a $50 million program for physi-

cal, organizational, and social change. After having witnessed the great successes already to his credit, I am sure that East Cleveland can show the Nation how to get results from imaginative planning.

I wish to extend to Mr. and Mrs. Apthorp a very happy and healthy future together in whatever endeavors they plan to undertake. My pledge goes to Bill Gaskill, executive assistant to Grant Apthorp, who will become city manager. The city of East Cleveland remains in very capable and creative hands. I will continue to offer every possible assistance to assure the continued revitalization of East Cleveland.

I wish to insert at this point a very fine editorial which appeared in the Cleveland Plain Dealer on Thursday, March 20, on the retirement of Grant Apthorp. The editorial is as follows:

APTHORP AN ASSET

It is fortunate for East Cleveland that City Manager Grant T. Apthorp will remain in the community and serve as a consultant-without-pay to the administration after he retires June 1.

We hope the East Cleveland City Commission will continue to profit from Apthorp's complete knowledge of municipal affairs, his special talent for fiscal management and his long experience in dealing with the state legislature on matters of interest to his own and other cities.

Apthorp has given of his skills and know-how to East Cleveland's government for nearly 46 of his 68 years. In the county and in the state he is recognized as an authority on city problems and an effective spokesman for municipal rights.

East Cleveland is fortunate to retain the valuable resource it has so long possessed.

ST. PATRICK'S DAY: THIS DAY WE CELEBRATE

HON. EDWARD A. GARMATZ

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1969

Mr. GARMATZ. Mr. Speaker, we all realize that the Irish have been among us for a long time, but I wonder if we realize just how long. The Hibernian Society of Baltimore last Monday observed its 166th anniversary, an indication of the long time the Irish have been in Baltimore. Their influence has been felt throughout all levels of our city and State.

There were about 800 persons present at the banquet, including many city, State and Federal officials, high-ranking military personnel, and representatives of the St. Andrew's Society, the St. George's Society, and the German Society.

In addition to the fine entertainment always a part of these banquets, we had the privilege and pleasure of hearing an address by our colleague, the gentleman from California, JEROME R. WALDIE. Knowing that his remarks will be of interest to all of you, I include them herewith for your perusal:

THIS DAY WE CELEBRATE

(By Congressman JEROME R. WALDIE, Hibernian Society of Baltimore, March 17, 1969)

Mr. Chairman, Senator Tydings, Most Reverend Clergy, Judge Finan, Mr. Mayor, and Gentlemen: I am most pleased and honored to be wtih this noble and highly respected Society of Hibernians on this most auspicious occasion, and I am particularly pleased and honored to be in the presence of my colleagues in the House of Representatives, the entire Baltimore congressional delegation: The Honorable George Fallon, my former chairman, as I was for two years a member of his Public Works Committee; the Honorable Edward A. Garmatz, chairman of the Merchant Marine and Fisheries Committee, and the Honorable Samuel Friedel, chairman of the House Administration Committee. I don't know if many of you here are fully aware of the tremendous power that the city of Baltimore has by virtue of this triumvirate of highly respected and capable committee chairman. I know of no city in America that is as blessed in that respect as is Baltimore, and unless you are a member of the House of Representatives and thereby aware of the tremendous power of committee chairmen in that body, you perhaps would not be cognizant of the power that is yours through these three men.

And, finally, let me similarly pay my deep and sincere respects to my very good friend and personal host this evening, Senator Joe Tydings. Were he of a mind he could be elected overwhelmingly in the State of California where he made a tremendous number of friends at every appearance that he made on behalf of the late Senator Robert Kennedy.

I am among those Californians who became ardent fans of his during that campaign.

Although the Irish blood in me may be slight, being slightly thinned by that of several other nationalities, on St. Patrick's Day, I, like any politician worth his salt, whose grandmother is named Annie Sweeney, am totally Irish—and most proud of it.

The timing of this day, one of the few bright spots in the otherwise dreary month of March, is one of the finest things about it. Finley Peter Dunne's fabled Irish pub keeper, Mr. Dooley, summed it up properly when he said, "If there's wan thing that St. Patrick did for Ireland that I like better than anything else, tis the day he fixed for his birthday . . . being an ingenious man as well as holy and well read in the Calendar, he named a day that was sure to fall somewhere in the middle of Lent."

Philosopher Dooley also had words to say of March 16th—which he called "the longest day in the year." Heathen astronomers say it ain't—but I know better," he said, "An the 17th is the shortest, it's like a dream. It don't last more than a minute, but a million things can happen in it."

The Irish in the United States are much like Mr. Dooley's description—they haven't been here in great numbers for very long—but a million things have happened to them because of them in that short time.

But to me, the most obvious mark left by the Irish in America is in my own profession—politics.

To the Irish, politics was an attractive profession in those early years. Since newly naturalized voters were usually more willing to give their votes to another son of the old country than to a native born candidate, politics was one of the few professions in which it was an asset rather than a drawback to be an immigrant.

It was said that the Irish didn't enter politics—they erupted—and the many election day riots attested to that.

The Irish had a real advantage over other groups of immigrants in that they came with a live political tradition. They had learned some understanding of the use of politics and of the discipline a successful political organization required. They had a common language and shared the culture of the new land. They had gifts of charm and eloquence.

The Irish antagonism of England offended some leaders, but it did not upset most Americans since in the 19th Century twisting the lion's tail was the national sport.

It was the English, in fact, who helped align the Irish with the Jeffersonian tradition and the Democratic Party in the United States. The old Federalist Party sided with England against revolutionary France in the 1790's. This meant that the Federalists were also against Ireland which had hoped to win its independence with French aid as had the United States.

This tradition of an alliance with, and affection for the Democratic Party, was very strong among the Irish. The story has been told by John Danaher of Connecticut, who in 1938 became the first Irish Republican ever elected to the U.S. Senate.

It seems it was Danaher's father who switched allegiance to the GOP, an occasion that prompted an old Irish Catholic lady to say to her friend, "have you heard the news? John Danaher has become a Republican!"

"It can't be true," her friend replied, "I saw him at mass just last Sunday."

Teddy Roosevelt encountered some of the same feeling on one of his whistlestop campaign trips.

During one of his orations an Irishman evidently fresh from a nearby saloon kept interrupting the candidate with shouts of "I'm a Democrat, I'm a Democrat." Finally, Teddy asked the Irishman why he was a Democrat. "My grandfather was a Democrat, my father was a Democrat and I am a Democrat," the Irisher replied.

With no small amount of sarcasm Teddy added, "My friend, suppose your grandfather had been a jackass and your father had been a jackass? What would you be?"

Instantly the Irishman replied, "A Republican, sir—a Republican."

The Irish made their big move into American politics at the time when both the theory and practice of politics were at a particularly low ebb. And there are those who will tell you that the Irish entry didn't necessarily result in a marked improvement. But if any there be of such a mind, I would strongly recommend they not give voice to such traitorous sentiments on this day of days!

The Irish took over the political party at the local level and converted it into virtually a parallel system of government. When the machine became strong enough and came into power it could provide that most precious of all commodities—for an immigrant—a job. When the machine was in power it expanded construction, building courthouses and schoolhouses and paving more streets, digging more subways and erecting new bridges. When the reform governments were in office public construction work was cut back—and Irish jobs!

It was quite true that at times the morality of Irish early politics did not bear the closest of scrutinies. Thus an old-time Irish district leader was once investigated by city officials on a charge of accepting bribes for favors rendered. When the Irishman, who was on the city payroll for $7,000 per year, was asked how on his salary he was able to bank $40,000 annually, he replied innocently and simply "thrift."

This period was the time of Tammany Hall's greatest influence in New York City. During that era there was a notable ward boss by the name of "Big Tim" Sullivan. On one election, prior to granting women the vote, Big Tim carried his district with a majority of 8,571 votes to two votes for the Republican opposition, and naturally his friends thought that Big Tim would be very happy with the results. But instead, Big Tim the next day was quite glum and nasty of disposition. When asked why, Tim explained, "Last week Joe Doyle come to me and said that the fellow running on the Republican ticket was

a relative of his wife's and the women in his family were at him to vote for him. So I told Joe to go ahead and vote for him."

"What I want to know *now* is—who was the other S.O.B. who voted Republican without my permission?"

It was a mark of their skill, that many Irish politicians achieved power at an early age. Alfred E. Smith and Jimmy Walker were floor leaders in the New York Legislature while still in their thirties and James Michael Curley of Boston was a Congressman at 36 and mayor of Boston at 39.

All three had charm, boldness, energy, and a quick mind. This coupled with a fluent tongue brought these young politicos to the top rapidly.

It was Walker, you may recall, who was questioned by Franklin Delano Roosevelt, "Why do you Irish always answer a question with a question?"

"Do we now?" answered Walker.

Alfred Emanuel Smith, the happy warrior, was a natural actor, as were most politicans of the time. He learned his lines quickly and remembered them. He could ad lib a speech for an hour and a half or two hours and his loud voice carried in the largest hall.

He knocked around in politics in the blood and guts nineties and the turn of the century days when politics was a lusty man's trade carried on in saloons and at torch-lit parades and street corner rallies.

During his heyday Al would cite the story of the lady temperance orator who concluded her vibrant pleading with, "I would rather commit adultery than take a glass of beer." And a voice came from the back of the hall, thick with Irish accent, "Who wouldn't?"

After a brilliant record as legislator and Governor in New York Al Smith was selected as the nominee of the Democratic Party in the election of 1928.

It wasn't the best time for an Irish-Catholic Democrat. The country was in a time of prosperity and Smith was ill-prepared for the national issues and unfamiliar with the West and Midwest.

Will Rogers told him, "You can't lick this prosperity thing. Even the fellow that hasn't any is all excited over the idea."

But the final analysis of the 1928 election showed what really had happened. A man qualified by integrity, talent and achievement had been denied the Presidency in a campaign that was marred by religious hatred and snobbery towards a self-made man. It seems that the country had rejected Smith because of his family origin, and his religion and paid little or no attention to his vision of the country as he thought it ought to be.

Many an Irishman bowed his head and wept after the election of 1928 and despaired of the workings of the democracy.

It was during the time of Al Smith that another Irishman came to prominence in Boston. He was James Michael Curley, a man with more ups and downs than a mug of beer at Hooligan's.

James Michael Curley was elected four times to Congress and four times mayor of Boston and held other offices ranging from alderman to Governor in his nearly fifty years of service to the people of Massachusetts. Yet he was defeated once for the House of Representatives, once for the Senate, twice for the governorship and no less than six times for mayor of Boston.

His was a career of turbulence never completely free of an aura of aggression and violence.

At one time in his career he unloaded an uppercut at his Republican foe on the day he was sworn in as Governor and he once threatened to throw a high city official through a window to the street below if the official carried out a threat of removing Curley from his alderman's post because of a "minor" infraction of the law which sent Curley to the city jail for only 60 days.

Curley made little pretense to sincerity in his political campaigns. He said, "there are times, when, if you want to win an election, you must do unto others as they wish to do unto you, but you must do it first. It's all a part of the great game of politics, where the epithets are not to be taken too seriously."

Once when confronted with a fellow Irishman for an opponent, Curley took note of the fact that the man, although a Catholic, had moved near a Protestant church. Curley charged his opponent, a man named Murphy, had done it so as not to have so far to walk to church. And while Murphy spent several days denying it, Curley went to work on another attack saying that the counterman at Thompson's saloon had seen Murphy ordering a roast beef sandwich on a Friday. "While I," said the outraged Curley, "was at St. Mary's walking the stations of the Cross." Despite it all—or because of it—Curley won again.

Early in his career Curley had forced out of office a more conventional Boston Irishman who had served two terms as mayor. He was Honey "Fitz" Fitzgerald, the father-in-law of Joseph P. Kennedy, and grandfather of John F. Kennedy.

Joe Kennedy was among the number of men of his age who had lowered their heads at the defeat of Al Smith but were quick to respond to the challenge of a new leader in 1932, and the leader's new deal. They included Thomas G. Corcoran, the most gifted and versatile of the new deal brain trusters; John McCormack, who was one of Roosevelt's most effective and dependable lieutenants in the House of Representatives and who is now Speaker of the House, and James Farley, who became the ablest party manager of his day. Joseph P. Kennedy made real an old Irish American dream by becoming Ambassador to Great Britain. He later presided over the fulfillment of an even more splendid dream in 1960—the election of his son, John Fitzgerald Kennedy to the presidency!

For these men, and for the Irish American community as a whole, the economic breakdown that was the depression afforded the occasion for a major breakthrough from the old confines of city and State politics. None of this group became a real presidential possibility, but as a group they made possible the transition from Al Smith, (who had lost, to John Kennedy, who in 1960 did what had been the impossible for the Irish-Catholic, he became President of the United States.

Jack Kennedy knew he had more against him than being an Irish-Catholic. He also had the political liability of being rich as well. But he never tried to hide the fact from the people.

During the 1960 campaign he told the annual gridiron dinner at the National Press Club in Washington that his father had just sent him a telegram.

Opening the alleged wire he read, "Buy all the votes you can, but remember I am not paying for a landslide."

The late Senator Robert Kennedy was also of quick wit. Once noting that there were two Rockefellers running for Governor, he said, "If there is anything I hate in politics, it's someone who runs on a famous name."

John Fitzgerald Kennedy's winning of the presidency in 1960 was the fitting capstone for a century of Irish-American political activity. It swept away the disappointments and bitterness of Al Smith's 1928 disaster. The Kennedy victory was an accomplishment in which all Irishmen could take rightful pride and pleasure.

John Kennedy was their man—a man of words, a scholarly reader and writer, an orator of great ability and power and a man of taste and sensitivity. He was a man from a people who have produced so many poets, singers, actors, writers and good talkers. These people deserve to have as their greatest political leader a man who loved the language and could use it.

Jack Kennedy was such a man.

But the tragedy that took him away from his people—all of us—has not ended what he started. Electing the first Irish-Catholic was like the first man in space, the first seven-foot high jumper or the four-minute mile. After a time the memory of how difficult the first task was will grow dim. It will happen again—and who knows how soon? Perhaps 4 years from now.

So on this St. Patrick's day that we celebrate with such grand company, let us toast the man in public office. From the old Irishman who congratulated himself by saying. "Half the lies told about me are not true." To the men who serve our country now—and to those who will lead it in the future—may many of them be Irish—and if they are not—may they be as grand as an Irishman.

SIECUS

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1969

Mr. RARICK. Mr. Speaker, the concerned parents of America are speaking out to keep their schools free for education and independent of unwanted dogma.

In recent years, far too many parents, misled by glowing promises of the effectiveness of "modern" and "progressive" education, have delegated the responsibility for moral instruction as well as the three R's to the public schools.

Now they, the parents, are demanding parental voice in school matters and the curriculum offered their children.

I think there is no better proof of this than news in the past several days which indicates that SIECUS-sponsored programs of so-called "sex education" have been rejected in two instances in Texas, banned at young ages by the House of Representatives of Oklahoma, and refused in Tangipahoa Parish, La.

So that we might have a national investigation of the operations and tax-exempt status of SIECUS, and similar organizations I have introduced House Resolution 329 for this purpose.

Mr. Speaker, I would like to have various news articles on SIECUS, a letter, and the text of my bill, follow my remarks for the benefit of our colleagues:

[From the Oklahoma Journal, Mar. 20, 1969]

HOUSE VOTES BAN ON SEX EDUCATION—58 TO 23 TALLY ENDS FIERY DISCUSSION

(By Paul English)

The Oklahoma House voted 58–23 Wednesday to ban sex education in all public schools.

The vote climaxed a torrid campaign by supporters of Sanity on Sex (SOS), a group opposed to sex education in schools and especially to material recommended by Sex Information and Education Council of the United States (SIECUS), a national organization.

The bill provides that local school boards could hold a hearing and fire any teacher accused of violating any section of the bill.

Sponsor of the measure, Rep. Lonnie Abbott, D-Ada, said the SOS group had shown him "filthy, lewd material" which allegedly was being used in some schools in the nation.

[From the Amarillo, (Tex.) Daily News, Mar. 20, 1969]

SIECUS GETS TWO TURNDOWNS

SIECUS is becoming a controversial term in some communities across the Southwest,

although the SIECUS-sponsored program of sex education in the schools has not been adopted in any Texas community that we know of.

Some communities are taking the initiative by acting against it before it has a chance to infiltrate the schools.

Last week the El Paso school board voted disapproval of SIECUS.

And yesterday the Borger school board unanimously rejected it.

"Now it's a closed subject in Borger," said Stewart Dunaway, board president.

SIECUS stands for Sex Information and Education Council of the U.S.

Its headquarters are in New York.

It is described as a voluntary "health agency" dedicated to helping communities and schools set up sex education programs. It enjoys a certain degree of official and institutional support.

It operates largely on foundation grants.

Executive director of SIECUS is Dr. Mary Calderone.

Three of its board members are also staff or board members of a publishing company that puts out the sensational "Sexology" magazine, readily available among the more lurid publications on newsstands.

Its treasurer, Isadore Rubin, has a long history of left wing political activity, and has been involved in Un-American Activities Committee investigations.

SIECUS believes in starting sex education in the schools from the earliest grades—and apparently with little left to the imagination of the pupils.

It doesn't seem to be the sort of program Texans will take to, and we trust that communities throughout the Southwest will follow the example of Borger and El Paso and turn thumbs down before SIECUS gets a hold on any of our schools.

THE PRENTICE-HALL CORP. SYSTEM, INC.,

Dover, Del., March 11, 1969.

Re SIECUS (Sex Information and Education Council of the United States).

Mrs. ———— ————,
———— ————.

DEAR MRS. ————: Reference is made to your letter of March 8 concerning the above-named Delaware corporation, for which we act as registered agent. In the capacity just noted, we have no complete knowledge of the activities of the corporation. According to the latest annual report filed with the Secretary of State of Delaware, the nature of the corporations business is "health and education, non-profit, tax exempt agency". Its place of business outside of Delaware is listed as 1855 Broadway, New York City 10023. May I respectfully suggest that you communicate with the corporation at the above address for a more complete answer to your inquiry.

Very truly yours,

Z. A. POOL, III,
Assistant Vice-President.

H. RES. 329

Resolved, That there is hereby created a select committee to be composed of ten Members of the House of Representatives to be appointed by the Speaker, one of whom he shall designate as chairman. Not more than five members of the committee shall be members of the same political party. Any vacancy occurring in the membership of the committee shall be filled in the same manner in which the original appointment was made.

The committee is authorized and directed to conduct a full and complete investigation into the operations and tax-exempt status of the Sex Information and Education Council of the United States, Incorporated (S.I.E.C.U.S.), and any other organization instructing, indoctrinating, or training minor children in those subjects traditionally the responsibility of the home, including but not by way of limitation, sex, religion, and morals without express consent of their parents.

For the purpose of carrying out this resolution the committee, or any subcommittee thereof authorized by the committee to hold hearings, is authorized to sit and act during the present Congress at such times and places within the United States, including any Commonwealth or possession thereof, whether the House is in session, has recessed, or has adjourned, to hold such hearings, and to require, by subpena or otherwise, the attendance and testimony of such witnesses and the production of such books, records, correspondence, memorandums, papers, and documents, as it deems necessary; except that neither the committee nor any subcommittee thereof may sit while the House is meeting unless special leave to sit shall have been obtained from the House. Subpenas may be issued under the signature of the chairman of the committee or any member of the committee designated by such chairman or member.

The committee shall report to the House as soon as practicable during the present Congress the results of its investigation, together with such recommendations as it deems advisable. Any such report which is made when the House is not in session shall be filed with the Clerk of the House.

STATEMENT OF REPRESENTATIVE JOEL T. BROYHILL, OF VIRGINIA, IN SUPPORT OF THREE BILLS FOR THE BENEFIT OF RETIRED FEDERAL EMPLOYEES AND THEIR SURVIVORS, MONDAY, MARCH 24, 1969

HON. JOEL T. BROYHILL

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1969

Mr. BROYHILL of Virginia. Mr. Speaker, today I am introducing three bills supported by the National Association of Retired Civil Employees (NARCE), an organization founded in 1921. The objectives of NARCE are to serve civil service annuitants and their survivors, and potential annuitants and their survivors under retirement laws, and to sponsor and support beneficial legislation.

I feel strongly that the legislation, represented by the three bills I will introduce, should be carefully considered and studied.

The first bill I am introducing will not bring all low-income retirees above the poverty level, but will give them a substantial increase in their annuities with the largest increases going to those with the smallest annuities. It would give an increase to all Federal retirees and their survivors as follows: $26 per month if now less than $200 per month; 13 percent if now at least $200 but less than $300 per month; 9 percent if now at least $300 but less than $400 per month; 7 percent if now at least $400 but less than $500 per month, or 5 percent if now at least $500 per month.

Of an approximate 800,000 retired civil employees and their survivors, some 279,000 receive a monthly annuity of less than $100, and 513,000 receive less than $200 per month. Using a poverty level income of $3,000 per year, 611,000 plus former employees and their survivors are now living in poverty. The only way we can correct this great injustice is to grant these former Federal employees a substantial increase.

Mr. Speaker, the second bill I am introducing would correct one glaring inequity which is providing a special hardship on a number of retirees. The present retirement law provides that a retiree at time of retirement may elect to take a reduced annuity to provide a survivor annuity for his spouse.

Some annuitants who retired many years ago were forced, under law, to take as much as a 25-percent reduction in their annuities to provide for a survivor's annuity. Over the years, liberalizing amendments have been adopted and those retiring today take a reduction of 2½ percent on the first $3,600 of annuity and 10 percent on the remainder. The law also states that only one election can be made, and that at time of retirement.

When a retiree is predeceased by the named spouse he must continue to pay for a survivor's annuity through his reduced annuity as long as he lives, although there never will be anyone who can receive the survivor annuity. Also, if the retiree remarries he cannot name the second spouse as beneficiary. This bill which I have introduced provides for the restoration of the full annuity, or permits the retiree to name a new spouse as survivor when the originally named spouse predeceases the retiree, and the new spouse has attained age 60.

I believe the present law is not fair or just. The retiree has reduced his own annuity to provide for his spouse. If this spouse predeceases him and he remarries, even though he still must take a reduced annuity each month, he cannot provide any security for the second spouse. One can change a beneficiary on an insurance policy, why not on a survivor annuity, which is in itself a form of insurance an employee elects by taking a reduction in his monthly annuity?

Mr. Speaker, the third bill I am introducing is to increase the credit against tax for retirement income. This bill is to correct an injustice which has come to my attention.

The credit against retirement income was intended to provide equal treatment under the law for those who receive social security payments, which are totally tax exempt, and those who receive an annuity from some other public retirement system. When increases were provided for social security recipients we did not follow through and increase the tax credit in proportion. This bill will correct that oversight.

Mr. Speaker, I realize this is not the perfect answer to the complex problem of equalizing tax treatment but it is a step in the right direction. We may possibly have to approach this problem from a different angle and consider a flat exemption of some part of the retirement income.

I need not remind my colleagues that the rising cost of living has steadily reduced the buying power of those living on fixed incomes. When we consider this factor, along with the realization that many of these retirees retired years ago, when salaries were low and produced small annuities which are now inade-

quate to maintain an acceptable standard of living, the great problem our retirees face becomes increasingly evident.

It would seem to me that we have a responsibility to correct such injustices and give these former Federal employees a life of dignity.

THE LATE HONORABLE HENRY O. TALLE

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 17, 1969

Mr. ROONEY of New York. Mr. Speaker, I was saddened last week to learn of the recent passing of the Honorable Henry O. Talle who for 20 years represented the people of Iowa's Second Congressional District. I had the pleasure of intimately knowing Henry for many of those 20 years and while we may have disagreed on some things from time to time, it was a distinct privilege to serve with him as well as to travel abroad with him. Henry Talle was a well respected and diligent Member of the House of Representatives and those of us who knew him will miss him greatly. To his dear wife and family I extend my deepest sympathy on their great loss.

MILITARY SHOULD SPEAK OUT ON SST

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1969

Mr. PELLY. Mr. Speaker, recent statements by Treasury Secretary David Kennedy on the SST in which he called for a "delay" in the program appear to be very shortsighted to me. It looks as though the Secretary is concerning himself more with "outgo" than "income."

In suggesting a deferral in America's supersonic transport program, the Secretary apparently overlooked the hundreds of millions of dollars in benefits to our balance of payments as well as the tax income that will come from the many thousands of jobs this project will create.

But, aside from the economic advantages to be derived from the SST program, there is the military consideration. Defense Secretary Laird is an open champion of the multibillion-dollar Sentinel ABM system, yet he has not stated his support of this aircraft which has decided and vital military capabilities.

The Seattle Times recently editorialized on this military aspect, and for the information of my colleagues I include this editorial in the RECORD:

MILITARY SHOULD SPEAK OUT ON SST

The Times suggests the time has come for military officials at the highest uniformed level to end their silence regarding the military value of the proposed supersonic transport.

The SST is, of course, planned as a commercial product—a futuristic craft that will carry more passengers for longer distances at higher speeds than foreign-built competitors, and thus maintain Uncle Sam's international sales supremacy in commercial aviation.

Yet the SST would have indisputable military value as a means of whisking troops and equipment to trouble points anywhere on earth in a matter of hours.

In this respect, it should be kept in mind that all aircraft operated by United States commercial airlines are part of a "reserve fleet" that can be converted to military use in an emergency.

The Soviet Union already is testing its first SST, and one can be sure the high priority assigned that project, despite the strains in the Soviet economy, is due in large measure to the craft's military value.

In addition to the SST's potential as a military carrier, which is unquestioned, there is great likelihood that some of the technical knowledge gained in developing the commercial transport would be useful in building an Advanced Manned Strategic Aircraft, a new Air Force bomber that Defense Secretary Laird reportedly will ask Congress to support at a high funding level.

Yet the SST apparently is being subjected to serious challenge within the 11-man commission that President Nixon has appointed to study the project.

The commission has been divided into four subcommittees, each of whose reports is said to be "weighted on the negative side."

What is most disturbing, though, are reports noting that the military has not spelled out its views.

Transportation Secretary John A. Volpe (who reportedly favors the SST) says he will forward the commission's report to the President by April 1.

Thus not many days remain in which the military can get its views on the commission record. It is time to do so.

THE LATE HONORABLE HENRY O. TALLE

HON. NEAL SMITH

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 17, 1969

Mr. SMITH of Iowa. Mr. Speaker, I would like to join my colleagues in paying tribute to the former Congressman from Iowa, Henry O. Talle, who passed away last Friday, March 14, 1969. Henry Talle spent his entire life serving the people of Iowa and the Nation. During the First World War, he served his country as an officer in the Navy. After the war, he embarked upon a long and successful career as an educator, serving as professor of economics at Luther College in Decorah, Iowa, from 1921–38. He was also the treasurer of Luther College from 1932 to 1938. In 1938 Henry Talle was elected to Congress from the Fourth District of Iowa, and was reelected in 1940. After redistricting, he was elected from the newly formed Second District in 1942, and was returned every election until 1958.

During his 20 years in Congress, Mr. Talle served as the ranking minority member of the Banking and Currency Committee, the Joint Economic Committee, the Joint Committee on Defense Production, and the House District Committee. In 1959 he was appointed as Assistant Administrator for Program Policy with the Housing and Home Finance Agency.

Although I came to the Congress from a different district of Iowa on the same day he left and therefore did not have the pleasure of serving with Mr. Talle, I know he enjoyed the reputation of a courageous and devoted public servant. He is held in the highest esteem by those who knew him, worked with him, and were so faithfully represented by him for so many years.

Mrs. Smith and I extend our deepest sympathies to Mrs. Talle and the members of his family.

CHARLES A. SPRAGUE

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1969

Mr. ULLMAN. Mr. Speaker, the State of Oregon has lost one of its most valued citizens and one of its greatest statesmen with the passing of former Gov. Charles A. Sprague.

He was an independent man, advisor to Governors, legislators and private citizens, sharing his wealth of knowledge and his keen sense of what was right in public affairs. He will be greatly missed, for he was one of a kind.

As the Portland Oregonian said in tribute:

Oregon is much, much poorer today because of the departure of Charlie Sprague. But his example should inspire Oregon leadership for a long time to come.

His friend, and competitor in both politics and publishing, Dewey Rand, wrote in final tribute:

You were a very nice, a very good guy, Charlie Sprague.

I place two representative editorials, expressing the sorrow of all Oregonians, in the RECORD at this point:

[From the Oregonian, Mar. 14, 1969]

CHARLES A. SPRAGUE

Charles Arthur Sprague was Oregon's wartime governor, an office in which he served with distinction. But his eminence in the affairs of the state and the nation was by no means limited to that period (1939–1943). His influence was such that he was widely recognized for many years prior to his death Thursday as Oregon's most distinguished citizen.

Wherever he lived, Charlie Sprague built something. In Waitsburg, Wash., he built a school system as its superintendent while still in his early 20s. Later he served as assistant superintendent of instruction of Washington state. In Ritzville, Wash., and Corvallis he built newspapers. And, at 42, he moved to Salem to build the Salem Statesman, which was the base for his extensive civic endeavor for 40 years.

As the state's chief executive, Gov. Sprague was responsible for mobilizing the state's industry and manpower for World War II. He also had a hand in the introduction of enlightened forestry management policies, the benefits of which will accrue for centuries.

Well beyond the time most men have retired or are thinking of it, Gov. Sprague put his energies wholeheartedly into civic service. In 1952, he became the first Oregonian to become a member of the U.S. delegation to the United Nations. He bore heavy responsibility in the leadership of state commissions on government reorganization and constitutional revision and as president of Col-

leges for Oregon's Future. He served as a trustee of Willamette University and of Albany College, later Lewis and Clark College. He was active locally and nationally in the affairs of his church (Presbyterian) and was president of the Oregon Council of Churches. His leadership roles in many other civic enterprises—the Community Chest, Salem Philharmonic, YMCA, Salvation Army were a few—are too numerous to catalogue here. At his death he was the incumbent president of the Oregon Historical Society, a demanding job he accepted in his 81st year.

But such positions and the many awards he received for accomplishment are not a full measure of Gov. Sprague's contribution to his community, state, and nation. He was the respected consultant of Oregon governors and legislators of both parties. A life-long Republican, he often crossed party lines. It could be said of him as of few politically inactive men that he put principle above politics.

Legislative leaders and committees gave him the attention due his deep knowledge of Oregon affairs. He was always on hand when he felt an important issue was at stake—often in such controversial fields as conservation and civil rights. With the late William M. Tugman, editor of the Eugene Register-Guard, he waged a successful fight against the imposition of a restrictive teachers' oath by the 1951 Oregon Legislature, just one of the many products of his ceaseless concern that public policy be enlightened.

Late in the afternoon of almost every day of the week he could be found in his cluttered office in the Statesman, writing his daily column, "It Seems to Me," which supplemented his personal civic efforts. One day it might concern a critical issue at the Statehouse, the next the anniversary of the birth of Chopin, and on another day methods of teaching in the Salem schools (he, himself, sat as a pupil to get his material for that one).

Oregon is much, much poorer today because of the departure of Charlie Sprague. But his example should inspire Oregon leadership for a long time to come.

[From the Capital Press, Mar. 21, 1969]

PASSING IN REVIEW

(By Dewey Rand)

The name Charles A. Sprague is surely a familiar one to most readers of this column although many may not have known Governor Sprague personally. It was my good fortune that I did know him well and that we were, in a limited way that I will describe, friends through the circumstances of our businesses and residence in Salem.

On his death last week it was both fitting and natural that Charles Sprague, for more than two decades editor and publisher of the Salem Statesman, would be eulogized by his fellow editors. He was, beyond argument, the most eminent member of his profession in Oregon, and the tribute he has received, even when it might seem extravagant, was earned and deserved. I would hope that you have read at least some of it.

But his fame, if that is the word, had become such that comments have naturally centered on his outstanding accomplishments as an editor, a politician and an actively participating citizen. What about Charles Sprague as a person rather than a public figure? For balance, and because the one side has been so well and extensively done by others, I would like to write a little about my own associations with this very unusual man.

When I came to Salem in 1946 it was only a few years after Mr. Sprague had become sole owner of the Statesman. What brought us together first was contract negotiations between local employers and members of the typographical unions. These were not easy times for any of us. The employers were facing post-war price increases of materials and labor. Union members were in a bind also trying to match incomes to increased cost of living.

It was through these many annual meetings that I learned first hand about Charles Sprague's extraordinary capacity to see the other man's problems and also his inherent fairness. In fact, at times I thought him a little too "fair." Each year the wages went up and the discussion at the meeting always seemed to be about how much more the scale would increase. Each raise meant either lower profits, if any, or increased prices for circulation and advertising.

One year, before the annual meeting, I suggested that we employers might hold the line for once. He thought about this for a minute and his reply was that this would not be fair even it were possible. He was thinking about the position of our employees when he explained that if they got the same wages the next year it would mean a "cut" in their pay because of increased living costs. Serious as were our problems at times he had consideration for others. This was his way, thoughtful, fair and—right.

Through the years I never had a pre-arranged "social" meeting with Charles Sprague although at times I would visit him at the Statesman when mutual business interests dictated. We would however, meet by chance at lunchtime occasionally as happens in a community the size of Salem. Often his greeting would be: "Well, Dewey! How are your Democrats doing?" For we both liked to talk about politics and the political people we knew.

Without exception these meetings were a pleasure for me and he, I think, enjoyed them also. This might sound rather unbelievable considering that we were members of opposing political parties and rarely, if ever, did our newspaper endorsements of major candidates agree. But Charles Sprague, consistently Republican as he was, did not believe his party was infallible or that its candidates were without imperfections. Because of this he could discuss this fascinating subject without heat or emotion. Is this not too common characteristic of "partisans" important? I think so.

An editorial in the Eugene Register-Guard had this to say last week: "Governor of Oregon from 1939 to 1943, he remained 'the governor' the rest of his life. When someone asked, 'What does the governor say?' he likely meant not call McCall, Hatfield or any of those, but THE governor. A few called him 'Mr.', almost nobody 'Charlie'." This caused me to wonder, for in all our Salem association I had never addressed him in any other way than Charlie. I don't know why this was other than it seemed natural for me. Certainly, no one respected him more. And it is another measure of Charlie that "respect" was never something he demanded. It was showered upon him. It is my thought now that he may have liked a "Charlie" mixed in with "Mr." and "Governor" now and then.

When it became permissible, I visited Charlie at the hospital. When I entered his room his eyes were closed as he lay in bed. After waiting a minute I asked, "are you asleep?" He opened his eyes and held out his hand. "Well, Dewey! No, I wasn't sleeping." Then with his wry humor he said: "I was thinking about something. I have never smoked and I got lung cancer. Maybe the cigarette people could use me to counteract the anti-cigarette drive."

Are these small things reported here material when writing about Charles A. Sprague? I believe they are as important as the many unusual accomplishments that have been noted recently. And I would express the sum of these by saying something I'm sure he would have enjoyed as much as his many other deserved compliments. "You were a very nice, a very good guy Charlie Sprague."

LET US HONOR DR. ENRICO FERMI

HON. BERTRAM L. PODELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1969

Mr. PODELL. Mr. Speaker, I take great pleasure in joining in sponsoring a measure that would name the nuclear accelerator at Weston, Ill., the "Enrico Fermi Nuclear Accelerator," in memory of the late Dr. Enrico Fermi.

The first self-sustaining nuclear chain reaction ever to take place was a direct result of his work. This birth of the atomic age took place at the University of Chicago, where, under his direction, this first atomic reactor was built and uranium fission took place.

Enrico Fermi was as passionately devoted to the ideals of democracy as he was to the advancement of man's knowledge. After winning the Nobel Prize for Physics in 1938, he was a marked man. America became his refuge, to our benefit and that of all free men everywhere.

Enrico Fermi was one of the world's scientific pathfinders. He was a true explorer and groundbreaker, worthy of being ranked among the towering minds of history.

The Weston accelerator is designed to break new ground for generations of people yet unborn. It is one of those culminations of activity which bear fruit after so much effort. Were Enrico Fermi alive today, such a creation as the accelerator would undoubtedly command much attention and fascination from him. It is altogether fitting that we should honor him by naming this new scientific marvel for him.

Just as the spirit of free Italy lived with Fermi, finding expression in his scientific contributions, so the spirit of scientific inquiry will find new impetus from this machine.

NIXON ADMINISTRATION TO ACT AGAINST STUDENT VIOLENCE

HON. WILLIAM J. SCHERLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1969

Mr. SCHERLE. Mr. Speaker, President Richard M. Nixon's announcement that he intends to enforce the provisions of the Higher Education Act, including those providing for the withdrawal of Federal assistance from students engaging in violent and disruptive protest will assist college administrators in regaining control over the college campuses. These laws were not intended to stifle dissent but rather to prevent destruction. Last year, however, President Lyndon Johnson's administration refused to enforce any of these provisions.

Secretary of Health, Education, and Welfare, Robert H. Finch, has sent a letter to the presidents of the institutions of higher education calling attention to these sections of the law. This is laudable, particularly when contrasted with the foot dragging in this area by the previous

Secretary of Health, Education, and Welfare, Wilbur Cohen.

A subcommittee of the House Education and Labor Committee, of which I am a member, is presently holding hearings to determine the effectiveness of existing laws. It is most heartening to know that this administration has the courage to enforce the laws passed by Congress.

The Attorney General, John N. Mitchell, has also pledged to crack down on "militant activists" who conspire to create riots and disorders on the Nation's campuses.

President Nixon is to be commended for taking action to ease the current wave of campus disorders. No longer must the taxpayers of this country be forced to subsidize students who engage in disruptive behavior.

INDICTMENTS UNDER ANTIRIOT ACT FIRST STEP TOWARD RESTORING LAW AND ORDER IN AMERICA

HON. WILLIAM C. CRAMER

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1969

Mr. CRAMER. Mr. Speaker, it is with a sense of solid satisfaction that I note the recent action of the Justice Department in securing indictments under the 1968 Antiriot Act against eight individuals charged with instigating the riots and violence that took place at the Democratic National Convention last August.

As author of the Antiriot Act, I naturally had been concerned over the apparent recalcitrance on the part of the previous Attorney General to enforce its provisions. It is my belief that had the Justice Department, as I requested, made known its intention to prosecute individuals traveling in, or using facilities of interstate commerce, to incite riots before the August convention, at least some of the individuals under indictment today may have been discouraged from traveling to Chicago in the first place and much violence and bloodshed might have been avoided.

Indeed, it is high time the Government clamps down on those revolutionaries who are attempting to thwart the democratic process by fomenting riots in our cities and now on our campuses. The eight indictments returned on March 20 are evidence the Government under the Nixon administration will not permit our sacred institutions to be debauched and other people's property to be reduced to ashes.

Mr. Speaker, riots and civil disorders have no place in a government such as ours which provides ample and effective lawful avenues for individuals to register their complaints. To permit individuals to travel around the country for the purpose of fomenting riots is clearly not sanctioned by the Constitution or by the simplest standards of good reason and commonsense.

I am, therefore, highly gratified that the present Justice Department is enforcing the Antiriot Act and I commend the President and Attorney General Mitchell for implementing this first essential step toward restoring domestic tranquillity to the United States. It is my fervent hope that this action will have to be a deterrent to future rabble-rousing riot inciters who appear to have no respect for law and order or for other people's property or rights.

The article reporting on the Justice Department action in this matter which appeared in the March 21 edition of the Washington Post is inserted herewith for the information of my colleagues:

UNITED STATES INDICTS 16 IN DISORDERS AT 1968 CONVENTION—EIGHT POLICEMEN, EIGHT PROTESTERS FACE TRIAL

(By John P. MacKenzie)

Eight Chicago policemen and eight civilian demonstrators were indicted yesterday on charges growing out of the disorders at the Democratic National Convention last August.

The indictments charged a police lieutenant and seven officers of lower rank with individual action in beating up demonstrators. They charged the civilians, including prominent Yippies and other antiwar figures, with conspiracy to foment a riot.

Justice Department officials indicated that the bundle of criminal charges just about wound up the investigation of the convention turbulence. But they added that the Nixon Administration is far from through with investigations of youth violence, including campus disturbances.

The civilians indicted were David Dellinger, 53, chairman of the National Mobilization Committee to End the War in Vietnam; Rennie Davis, 28, a Chicago Mobilization project director and a leader in the Students for a Democratic Society; Tom Hayden, 28, an SDS founder and Mobilization steering committee member; Abbie Hoffman, 32, and Jerry Rubin, 30, top officers in the Youth International Party or Yippies; Lee Weiner, 29, a member of Northwestern University's sociology faculty; John R. Froines, 29, assistant professor of chemistry at the University of Oregon, and Black Panther leader Bobby G. Seale, 32.

They were accused of conspiring to violate the 1968 Civil Rights Act's ban on interstate travel to incite riots. It was the first criminal charge to be brought under this provision.

A separate indictment was returned against Enid Roth, a former NBC news director, charging her with trying to bug the Convention's Platform Committee. It was the first charge of illegally planting electronic listening devices to be brought under the 1968 Crime Control Act, which forbids all bugging and wiretapping except when law officers do it under court order.

Although eight persons on each side of the demonstrator-police confrontations were charged with crimes, the grand jury appeared already to have made an important judgment—that the Yippie leaders were riot conspirators, while any repression by Mayor Richard J. Daley's police force was the work of individual lawlessness by single officers.

The conspiracy charge carries a maximum penalty of five years in prison and $10,000 fine. Seven of the policemen, accused under a Reconstruction Era civil rights law, face a maximum sentence of a year in prison and $1000 fine if convicted. The eighth officer, charged with two counts of falsely denying the use of violence, faces a maximum of five years in jail and $2000 fine on each count.

Accused of perjury in yesterday's indictments was 39-year-old Lt. Carl Dobrich.

The other policemen, charged with beating up newsmen and students were Officers Arthur R. Bischoff, Thomas M. Mayer, George Jurich, Vincent J. D'Amico, Edward M. Becht, Thomas M. Flemming and Ramon C. Andersen.

The crux of the conspiracy indictment is that the demonstration leaders planned, beginning in mid-April, to go to Chicago with the specific intent of fomenting violence. The defendants, most of whom will appear voluntarily for arraignment by agreement with defense counsel, are expected to deny that they intended anything but peaceful demonstrations against the war.

Included in the indictment were 13 overt acts alleged to have furthered the conspiracy. They began with a speech by Rubin last July 23 in New York and ended with speeches and conversations and meetings at Lincoln and Grant parks in Chicago in late August.

The defendants, who have anticipated the indictment for some time, indicated in statements after the convention that they consider their utterances and meetings to be protected by the First Amendment's guarantee of free speech and association and that they acted peacefully until provoked by police.

The indictment charged that several defendants planned to publish articles and make long distance phone calls encouraging sympathizers to come to Chicago. It said the establishment of headquarters in Chicago, karate training sessions, park demonstrations with or without permits and other activities were likewise part of the plot for violence.

Also linked to the overall conspiracy was the charge that Weiner and Froines would teach other protesters how to make "an incendiary device" that was to have been used in an aborted scheme to blow up the underground parking garage at Chicago's Grant Park.

Yesterday's indictment listed 12 alleged co-conspirators who were not named defendants, including Mobilization leader Sidney M. Peck, a teacher at Western Reserve University.

Others listed were Wolfe B. Lowenthal, Sara C. Brown and Bradford Fox of New York; Stewart E. Albert of Berkeley, Calif.; Kathie Boudin and Corina F. Fales of Cleveland, Benjamin Radford of Chicago, Craig Shimabukuro of Los Angeles, and Bo Taylor and David A. Baker of Detroit.

It was not clear yesterday what decision had been made about disclosure of electronic eavesdropping by Federal agents in which Rubin was overheard. The Justice Department, which told the Supreme Court Wednesday it is reconsidering its entire disclosure policy, admitted to the Fourth U.S. Circuit Court of Appeals in December that Rubin's voice was heard on a listening device in a national security investigation.

THE POOR, DOWNTRODDEN, PUT-UPON NEW YORK TELEPHONE CO.

HON. BERTRAM L. PODELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1969

Mr. PODELL. Mr. Speaker, very recently, the New York Telephone Co. asked for a major rate increase. Their action highlights a serious situation whereby monopolies of this kind squeeze the taxpayer with ever-increasing frequency. Because of its ramifications, I not only have protested this action, but feel that a record of this protest might be illuminating to other Members of the House. As this nationwide phenomenon spreads, they may wish to act accordingly.

The text of my letter follows:

MARCH 24, 1969.

PUBLIC SERVICE COMMISSION,
Department of Public Service,
Albany, N.Y.

GENTLEMEN: The New York Telephone Company is proposing to add $175 million to the bills of 5.6 million telephone subscribers. They request a 10.5 percent rate increase on basic monthly charges for local residence and business calls, among other requests.

By their own admission, their rate of the profit is 6.87 percent, which they claim they must raise in order to attract investment capital to keep their construction program going.

I find this excuse unsatisfactory in the extreme, and consider their proposal unfair and unworthy of serious consideration or approval. Again, we see a massive corporation making major profits seeking still more for its coffers at the expense of millions of helpless members of the taxpaying public. Surely, there can be no element of fairness in their request.

Sincerely,

BERTRAM L. PODELL,
Member of Congress.

THE LUMBER PRICE CRISIS: INDUSTRY FINDS AN ANSWER

HON. WENDELL WYATT

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1969

Mr. WYATT. Mr. Speaker, last Thursday I spoke to the House suggesting what could be done by the Federal Government to solve the log and lumber shortage which has been responsible for the present high prices of lumber and plywood.

In this speech I mentioned what some private timber owners had been able to accomplish by intensified management of their own timber resources. A good example is the Weyerhaeuser Co., in the Northwest. In the Weyerhaeuser News of July 1967, nearly 2 years ago, that company reported in detail to their official family the plans, which by then had been adopted, to increase the yield of company lands on a long-term basis. While I am not advocating this exact program for Federal forest lands, I certainly think that this is the direction in which we should be heading. Therefore, I offer this full article herewith for the information of my colleagues:

Wild as it sounds, without adding a square foot of land, Weyerhaeuser Company is going to grow 33 per cent more wood in its forests in the future than it has been growing in the past.

This modern miracle is called the High Yield Forest and was outlined to shareholders at the annual meeting in April.

Briefly, Weyerhaeuser will get this extra fiber from the woods through fertilization, thinning, use of genetically superior trees and reforesting logged lands quickly.

In one way the High Yield Forest is evolutionary in that the skills and knowledge to do these four things have been accumulated by Weyerhaeuser through many years. This knowledge is the foundation on which the High Yield Forest will be built.

The High Yield Forest is revolutionary in that for the first time this vast pool of knowledge—some of it owned only by Weyerhaeuser—has been cranked into a computer in a simulation that proves how this 33 per cent increase in wood growth can be gained.

Yet revolutionary as it sounds, it follows the pattern Weyerhaeuser has set through the years.

Back in the early part of this century, the logging method was to "cut and get out," abandoning land and moving on to new forests. Weyerhaeuser made a radical departure at that time by deciding to keep its land wherever possible. This decision was one of the key ones which has given Weyerhaeuser Company its timber wealth today. This change in policy also set the pattern for today's industrial forest management.

Concurrently, the company began to study reforestation and—contrary to nationwide practices at that time—began treating timber as a renewable resource.

At the same time, Weyerhaeuser helped pioneer fire prevention and established better forest fire prevention and control methods.

These steps led in 1941 to the beginning of the privately sponsored American Tree Farm System, again setting a pattern for both private and public forestry, which has proved to be one of the great success stories in the world of conservation.

So today, when the company says it can increase the growth of its forests by 33 per cent, it's following the pioneering spirit which made these other basic decisions in the past.

The High Yield Forest for one thing is sound business. It will also bring benefits to our nation and the world just as the earlier departures into tree farming did. The plan is bold, just as earlier Weyerhaeuser departures into reforestation, fire prevention and tree farming were bold. And just as these earlier departures became the accepted forestry methods throughout the nation, so the high yield forestry concept promises to become the nationwide pattern on both private and public lands.

THE HIGH YIELD FOREST

This will do even more than tree farming did to revolutionize the timber industry!

That was a typical comment following the statement that Weyerhaeuser is going to grow 33 per cent more fiber in its forests in the coming years.

The statement is no blue sky dream, but based on a heavily documented report made to shareholders at the company's recent annual meeting.

The report is a blueprint for what is called the High Yield Forest. It describes how Weyerhaeuser Company lands are going to be producing more than 1,000 tons of wood per hour, day in and day out, forever.

The idea behind the High Yield Forest is really quite simple. It's that a tree farmer, like any other kind of farmer, can get bigger crops from each acre of land if he uses fertilizer, spaces his crops to let them grow as fast as possible, plants genetically superior seed and fully utilizes the total growth of the forest.

For example, American Indians grew 15 to 20 bushels of corn per acre. Today, the average production of corn in the United States is over 100 bushels per acre and production up to 200 bushels has been reached.

While the concept is simple, the means of carrying it out are probably as complex as any plan ever attempted in the industry.

This conversion to the High Yield Forest will be done in four basic ways:

1. Improvement of standing timber through thinning (and in so doing recovering fiber that would have been lost otherwise)
2. Fertilization
3. Getting quick and full reforestation of logged lands
4. Using genetically improved seeds for this reforestation

Much of the knowledge that makes this change to high yield forestry possible was not easily gained, but has been compiled in the past quarter of a century through research, study and practical experience in the field by Weyerhaeuser employees.

Some of the major contributions have come from the company's research laboratory which was created at Centralia, Wash., more than 20 years ago. These include new forest measurement and silvicultural techniques and intensive studies in soils, genetics, wildlife, forest disease and insects.

At other places throughout the company, work by forest economists, cruisers, log scaling and raw material supply men, logging cost analysts, accountants, and developers of new logging equipment have all poured facts into the High Yield Forest study.

A brief look at some of these individual skills and studies will illustrate both the complexity of the plan and how it will be carried out.

One step was to classify all the company's lands according to their tree-growing potential. Weyerhaeuser has some of the best conifer lands in the world, both for the amount of wood they will grow and also their location close to transportation.

By classifying these lands it can be predicted accurately what each acre will grow under different intensities of management thus making it possible to apply to each acre the most profitable combination of management techniques such as fertilizing and thinning.

This is one of the sound principles of any business, to achieve the most profitable combination of a large number of factors. In the case of forestry, however, this is the first time that so many of the vital facts have been determined with such accuracy and brought together.

Some of these facts were compiled over the years in the yield tables at the Centralia research center. These tables are more complete than any others in existence and isolate the different factors that affect tree growth.

Another key factor is the knowledge from thinning studies made over a period of years. This includes pre-commercial thinning, much as a gardener thins carrots to let the remaining ones grow larger, and several kinds of commercial thinning. Thinning helps the remaining trees grow more fiber and also gives new income in the form of fiber which in an unthinned forest is lost to insects and decay.

It's a lot like eating your cake and having it too. It's possible to take out over a third of the total volume in an average stand during the growth cycle, gaining additional income and still ending up with more wood when the stand reaches harvest age than it would have produced without thinning.

Today, the company is beginning to buy fertilizer in railroad car quantities and helicopters are spreading it on thousands of acres. This has been proven economically sound by a 12-year research and testing program.

In the field of genetics, a combination of seed orchards where only the best trees are used for growing seed, and nurseries where these trees get a head start, will increase future yields greatly.

The company also has accumulated over many years, a broad experience in reforesting logged lands. This is vital, for idle acres are not contributing to the company's supply of fiber.

The company has adopted a measuring system in which the unit is 100 cubic feet, called a cunit. This replaces the old board foot system which was developed when logs were used mainly for lumber. This old system tended to ignore the part of the log that ends up in anything other than lumber, such as pulp chips. Hence, it was not an accurate measurement for today's integrated mills where plywood, pulp and particleboard are also produced. The smaller the logs, the less accurate the old system became, so with the increased use of small logs in the High

Yield Forest, an improved system of measurement was even more necessary.

Finally, this increased production of timber will be handled by logging equipment far more efficient than that used previously.

Some of this equipment was pioneered by Weyerhaeuser. Some is a result of the general technological revolution in the industry. Some is yet to be developed, but will be as needs arise.

An example is the new equipment designed specifically to handle small logs. Other equipment will make logging of mature trees and the planting of new trees as much more efficient compared to past methods as the chain saw is compared to yesterday's two-man hand saws.

At about this point, the company had more facts than a battalion of scientists could interpret in a lifetime. So the computer scientists took over, programming all this into a forest model that simulated inventories, growth and harvest, and values and costs of all the company's lands, a task of many months in itself.

Then came that magic moment when it was possible to compare various harvest cycles to see which would yield the most fiber, to vary such elements as how much thinning compared to various amounts of fertilizer would yield the most in various cutting cycles and to balance the financial and biological considerations.

The effect was almost like stepping into a time machine. It was possible to look at the forests 30, 60, 120 years from now. It was possible to say "this is the High Yield Forest we will have, these are the steps we have to take to get there."

It was setting a goal, then creating the road map of how to get there, something it had never been possible to do so completely or with so much certainty in the industry before.

There are other sophisticated forestry programs in the industry, both in Europe and in North America. Many of them involve some of the same techniques as does the High Yield Forest.

What is it that makes Weyerhaeuser's program unique?

For one thing, the vastness of the program—nothing on this scale, at this intensity, ever has been attempted before.

Even more important, the High Yield Forest is not just a forestry program. It is a comprehensive industrial plan. Other programs have been aimed only at the goal of increasing fiber growth. The High Yield Forest is aimed at increasing that growth within the framework of projected market demands and the projected financial requirements of the company.

This overlay of marketing and financial considerations is what makes possible the selection of specific management programs for each acre within the company's landholdings. Each portion of our timberlands has not only its individual soil quality, moisture, slope and altitude characteristics, and its own latitude and longitude. Each also has its own characteristics in regard to its location near various mills and markets. Taxes and other cost factors affecting return on investment also differ in each area.

These factors are just as important in planning for a profitable forest as are the factors which determine potential tree growth under various management programs. When they are given weight in the computer simulation of the program, not only the tree growth but also the economics of the High Yield Forest can be simulated.

And with the computer simulation, if some of the factors change—if some of the techniques exceed expectations while others aren't as effective, or new methods are developed—the adjusted factors can be cranked into the computer and the plan adjusted for even greater efficiency.

Finally, the High Yield Forest generates its own cash to operate the plan, plus profit which would have been lost, by furnishing more fiber as the plan develops.

The High Yield Forest will differ from the forests of today. Gone are the days when land was reforested and then left for 20 or more years. Men will be working in these future forests all the time, to make them work harder to serve men.

This is conservation in its truest sense.

If an individual, for instance, merely hoards the money he has earned, he has in a sense conserved it. Inflation, however, will eat away at its value. And, while it serves a certain insurance purpose, the money is essentially idle and steadily decreasing in value.

If he invests this money wisely, however, it is not merely kept intact, but its purchasing value is also conserved. And, even more important, the money so invested earns new money—the asset is actually increased, as well as conserved. As this holds true with the individual and his money, it also holds true with the forest industry and its trees.

And this, in a sense, is the value of the High Yield Forest. While under the original sustained yield program, Weyerhaeuser was able to insure that it would always be able to operate with a constant supply of timber. Now the new High Yield Forest program will permit the company to operate with a dramatically increased supply of its basic raw material.

Weyerhaeuser Company's unique combination of circumstances, including the balance of old growth to second growth timber on its lands, and the quality and location of those lands themselves, makes this specific program possible at this specific time.

The High Yield Forest plan promises to become the nationwide forestry pattern of the future for both private industry and government.

THE 1970 CENSUS

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1969

Mr. DERWINSKI. Mr. Speaker, as a cosponsor of legislation to limit categories of questions required to be answered under penalty of law on the 1970 census, I was naturally pleased to note the strong radio commentary carried over WBBM, Chicago, Tuesday, March 18, dealing with this subject.

The editorial very effectively goes to the heart of the question. I am hopeful that the House Post Office and Civil Service Committee, on which I serve, will give the matter the proper attention it deserves.

The editorial follows:

THE 1970 CENSUS

Next year's federal census is supposed to check every household in this nation. It involves asking 120 questions on 67 different subjects. And any citizen who refuses to answer those 120 questions is subject to criminal penalties of 60 days in jail, or up to $100 in fines, or both.

There is now a bill before the House to make the answering of most of these questions voluntary instead of mandatory. We think this is a good idea. Of course, we support the basic information which a census is supposed to provide. That is name, age, sex, number of persons in the household, and a few other essentials.

But the next census goes far beyond these primary questions. It requires you to disclose your income from all sources including public aid and unemployment insurance. It requires you to disclose your educational background, your military and job background; it requires you to disclose the bathroom facilities in your home and if they are shared and if so with whom. The 1970 census requires all kinds of additional information such as whether you own a second home, a dishwasher, and radio and TV sets.

To our way of thinking, this is just too much federal information gathering. There are practical reasons why this information would be helpful in both governmental and private programs. But we do not support the idea that gathering this information should be required of all citizens. If you want to disclose your income and ownership of items, so much the better. But if you don't care to do so, we think you should not be required to answer questions under threat of criminal penalties.

A TALE WORTH REPEATING

HON. M. G. (GENE) SNYDER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1969

Mr. SNYDER. Mr. Speaker, my friend, Ben V. Flora, superintendent of Bellevue public schools, Bellevue, Ky., sent me the following article which all members of Congress should read. It is entitled "A Tale Worth Repeating":

[From the Thief River (Minn.) Times]

A TALE WORTH REPEATING

Once upon a time there were two men who lived on farms across the road from each other. One of these men labored from early to late to plant and tend his crops, care for his livestock, improve his buildings and repair his machinery. His wife took part-time employment in the nearby town to supplement the family income and provide for the education of their children.

The other man preferred to rise at his convenience, spend many of his days in the nearby town playing cards, talking on the street corner or relaxing in an air-conditioned bar. His crops—seeded later than his neighbor's—were infested with weeds. He had no livestock, for they were too much work, and his buildings were in too poor repair to keep them. His wife joined him in town or went on her own way, letting the housework slide and neglecting her children.

By virtue of his effort, enterprise and initiative, the first man harvested a good crop, his livestock and their products brought top prices and his farmstead had a neat orderly appearance. Because of his indolence and carelessness, the second man harvested only little crop and his buildings deteriorated.

Then along came a being called Equalizer. He looked upon the second man and said, "Your children are undernourished and underclothed. I will provide you with sustenance for yourself and for them. You are poverty-stricken because you have little income. Your house is in poor condition; I will build you a new one."

He looked upon the first man and said, "You have more income than you require to provide your family with necessities; I will take the remainder from you. Your land and buildings and machinery are of great value; I will exact payment in relation to their value. Your production has created surpluses; next year I shall restrict the acreage you may plant. I shall take much of what you have and give it to your neighbor who is less fortunate than you."

Other neighbors heard what the being called Equalizer had to say and they reasoned thus: "Why should we labor when the returns of our labor are taken from us? Why should we not do as we please, forsaking our labors, when the being called Equalizer will

care for our wants and educate our children? Let us then pursue the course of leisure and pleasure."

Now the country in which this parable took place was called the United States of America and the being called Equalizer was the government. And the people grew lazy and dependent upon the Equalizer, and he lost his power to sustain them and they disappeared from the face of the earth.

AN OMBUDSMAN FOR THE UNITED STATES

HON. EDWARD R. ROYBAL

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1969

Mr. ROYBAL. Mr. Speaker, I am happy to have the opportunity to include in the CONGRESSIONAL RECORD a most interesting and thought-provoking article, entitled "An Ombudsman for the United States," written by Dr. Ake Sandler, Ph. D., professor of government at California State College at Los Angeles, and printed in the May 1968 volume of "The Annals of the American Academy of Political and Social Science."

The concept of a Federal ombudsman in America has been advanced as one possible means of making government more responsive and more responsible to the average citizen—as well as of providing a more effective way for an individual person to assert his rights against a seemingly ever-growing bureaucratic establishment in our increasingly complex 20th-century society.

Therefore, I believe Dr. Sandler's discussion of this important subject is especially pertinent today as a constructive contribution to the effort of citizens throughout the country to improve the quality of life in the United States—so that all Americans may one day fully enjoy the great promise of this land.

Dr. Sandler's article follows:

AN OMBUDSMAN FOR THE UNITED STATES

(By Ake Sandler)

(NOTE.—Ake Sandler, Ph. D., Los Angeles, California, is Professor of Government, California State College at Los Angeles. He has taught at Stanford University, University of California at Los Angeles, and the University of Minnesota. His work abroad includes a study of the Ombudsman in Sweden (1966). He has written a textbook in American government and has authored numerous articles on Swedish government and politics, for American as well as Swedish publications. He has appeared as expert witness at hearings on the Ombudsman bill in the State of California, 1966.)

"One wonders why the Republican Party waits another moment before coming out, as a party objective, for ombudsmen at all levels, state and federal,"[1] wrote a nationally syndicated columnist in November 1966.

Many who read this whole-hearted endorsement of the Ombudsman must have been astonished when they realized that it came from William F. Buckley, Jr., editor of the *National Review* and as conservative as one can be, this side of the John Birch Society. But he meant every word, and his unconditional support is an indication of the extent of the acceptance of the idea—an idea that originated in Sweden some 160 years ago.

Footnotes at end of article.

Just about everybody who considers himself educated knows what "Ombudsman" means—someone to whom people can take their complaints against bureaucrats, and from whom they can hope to get a complete and thorough hearing and, perhaps, redress. The Ombudsman has worked well in Sweden and in a half-dozen other countries, all of them, except England, with relatively small populations—none exceeding ten million. So the question immediately arises whether there is a population number beyond which one cannot or should not establish an Ombudsman because its size would render the office ineffective. England, with a population of over fifty million, has an Ombudsman of only very limited functions, who could not—certainly by Swedish standards—qualify as a genuine Ombudsman, and West Germany, with an equivalent population, has an Ombudsman solely for military affairs. Sweden incidentally, has Ombudsmen for both civil and military affairs, the Justitieombudsman (JO) and the Militieombudsman (MO). But some experts on the subject believe that twenty million may be the optimal population that an Ombudsman can handle effectively.

"Size," says Professor Stanley Anderson of the University of California, "is the single most important factor in considering whether to transplant the institution to another country."[2] That would rule out nations of the size of the United States—unless, of course, a federal Ombudsman were established for every state, as is the case with federal district attorneys. For some larger states, like California and New York, possibly two or three federal Ombudsmen might be necessary. We shall consider this possibility later in this discussion.

A CONSTITUTIONAL GAP

For all the intricacy of America's separation of powers and checks and balances, with numerous built-in safeguards to protect individual rights, there exists a gap—a constitutional gap—that exposes the citizen to some serious pitfalls. He can defend himself against just about everybody except the bureaucrat. The federal, state, and local bureaucracy can, if dishonest or unscrupulous, treat the "little fellow"—he who has no "connections"—with disdain, and subject him to all sorts of indignities, including loss of life, limb, and property, without having to worry for a moment about the consequences; for who will take a public agency or a public official to task? The courts? They are too busy, and when they have the time, it may take an eternity to get a decision, let alone a favorable one. And ordinarily the complaints are not of the type that call for legal action. Often, they involve administrative decisions. Sometimes several agencies are acting in co-operation. Then there is the attitude, on the part of both public and politicians, that such general complaints belong in the growing realm of "letter-to-your-congressman"—that "your congressman" properly is the person to listen to, and respond to, complaints of constituents against federal agencies or officials abusing their power or guilty of incompetence.[3]

The fact is that Americans feel that they "can't fight city hall," and so they do not; or if they do, they feel that they have little chance of getting anywhere beyond blowing off steam. Here is where the congressman enters the picture and provides a "couch" but little else. The irate citizen can "get it off his chest" and then go back to work and forget about it, because the average congressman (or any legislator, for that matter) has neither the time nor the inclination to *do* anything about a complaint other than to put in a phone call or write a letter on behalf of his complaining constituent.

SOME AVAILABLE REMEDIES

Americans are not helpless, of course—far from it; they have perhaps the most alert and active courts and tribunals in the world, which cover possibly the widest spectrum of complaints in the world. The complaints are of all sorts, and Americans, on the whole, fare well, for "American administrative adjudication and rulemaking are attended by the world's most fully elaborated procedural protections against ill-informed exercises of official judgment."[4]

Although the American people, on the whole, have confidence in their judges and in the courts, this confidence is not the same in all fifty states, and not the same from one social grouping to another. Negroes in the South obviously have little faith in the court system there, and many foreigners, such as Puerto Ricans and Mexicans—in New York and California, respectively—have found no reason to be jubilant about the way they are being treated in the courts, not to mention by the police—the latter often being immune to inquiry and examination. In California, where I commented in the *Los Angeles Times*[5] on a particularly flagrant case involving the shooting and killing of a Negro driver by a young police officer, the police not only enjoy the reputation of being "the best" in the nation, but virtually comprise a state within the state and go unpunished for countless abuses and violations of (minority) citizens' rights. At this writing (November 1967), a trial against peace supporters, who demonstrated at Century Plaza, Los Angeles, at the time that President Johnson spoke there, is attracting a good deal of attention. Several judges are handling these cases, and I spoke to one of them. He was, without doubt, prejudiced against their case, calling them "kooks" and other less printable names, and when I raised the question of constitutional rights, he seemed to think that this was almost irrelevant; yet he is a most honored and able judge in all other respects. This, I may add, is typical of the situation. And there are hundreds of similar cases pending or being tried in the United States at the moment that this is being written. So, although the remedies are there, and are frequently superior to those in most countries, they still leave much to be desired. The Ombudsman is designed to remove this deficiency in the adjudicative system.

WHO WOULD QUALIFY AS OMBUDSMAN?

A serious question often raised by those who support the idea of an Ombudsman for America is: Who would be able and willing to fill such an office? It requires a person not only with extraordinary merits and great prestige, but also with the energy and fortitude, not to mention courage, to tackle a task of this magnitude and scope.[6] Even at the state level, this is a problem. It has been carefully considered by all the states which have considered having their own Ombudsman. Proposed legislation in California, for example, provides for a commission, consisting of the state's Chief Justice of the Supreme Court, Attorney General, Speaker of the House, President pro Tempore of the Senate, and the President of the University of California, to "select one or more qualified candidates for the office of Ombudsman."[7]

Other states—Illinois and New York—leave it up to the governor to appoint the Ombudsman. But, in either case, it is understood that he must have special qualifications for the job. On the national level, he may be proposed by the Supreme Court, appointed by the President, and confirmed by both houses of Congress. This might seem like going to extremes for an office that is not after all, a constitutional office, and which would rank beneath that of a Supreme Court Justice, and perhaps even that of a Senator.

The person who is chosen for this arduous task should be unafraid of abuse or criticism. The job requires one of prominent national—perhaps even international—stature, known for his high principles and noble intents—the kind of person that Sweden has been lucky in finding in Alfred Bexelius, a former judge. He was interviewed by John Bainbridge for the *New Yorker*, and said:

The ombudsman cannot be concerned about his popularity. It is no secret that high officials in Sweden . . . dislike the ombudsman. They say that he is interfering in things he doesn't know anything about, and that they could do their jobs better if he would stop meddling, but all their grumbling doesn't mean a thing. Everybody knows that it is necessary to have an ombudsman.[8]

That is in Sweden. What about America?

I think it goes without saying that he should be nonpartisan, as is the case in all Ombudsman countries. But the Ombudsman should be not only nonpartisan, but also independent of politics. It is not a political office, and its holder should be a professional civil servant who never ran for public office, and will not be tempted to return to politics. He should serve for life, and should be so carefully selected that there never could be a question of his honesty, integrity, ability, or motive. This is indeed to ask for perfection—or pretty close to it. But it should be aimed for. In all the 160 years that Sweden has had its Ombudsman, the *man* has never been doubted.

DOES THE NATION REALLY NEED AN OMBUDSMAN?

Many earnest political scientists, and others who have concerned themselves with the matter, doubt that a national Ombudsman would be necessary, or, if necessary, possible. On the other hand, they do not deny that there are some glaring defects in the existing constitutional structure which cannot be glossed over or ignored—or excused by the comment that Americans are "in most regards" better off than others. The fact is that there is an inordinate number of miscarriages of justice in America—*daily*. And the most serious of these are not those committed, unintentionally or otherwise, by administrative agencies; they are those committed by federal courts and federal police—federal marshals and officers of the Federal Bureau of Investigation (FBI)—whose abridgments of civil rights, usually in dealing with members of minority groups, is serious, even after the adoption of the Civil Rights Act of 1964! As for police brutality, the numerous so-called "civilian review boards" which have been proposed in state after state (without success) bear witness to serious concern about this problem on the part of many citizens. And the vociferous opposition to such boards by police associations is not less significant. In some countries, notably Sweden, the Ombudsman is the real answer to this problem.[9]

The fact that so many of the states—from Connecticut to California—want such an office is an indication that maybe the nation, too, needs an Ombudsman, or perhaps several Ombudsmen. For the federal government reaches into every state, and its activities in the states often excel those of the state governments and are, in many cases, more vital to the pepole in those states. One need only mention Social Security and Medicare. Open a telephone directory in any major city, and you will find "United States Government" dominating the pages. Frequently, the complaining citizens' only resort may be the courts. An Ombudsman would be a direct and immediate remedy—and much cheaper!

THE CONSTITUTIONAL QUESTION

Where would a federal Ombudsman fit in? And to whom would he report? In Sweden and some other Ombudsman countries, the Ombudsman is primarily a judicial officer. He has the power to survey and to report on the courts, as well as to criticize them and to recommend changes in the law. No state, to date, is prepared to give the Ombudsman this authority; he is entirely an executive official, whether the creature of the legislature or the governor. He is much like the head of the independent regulatory commissions such as the Interstate Commerce Commission (ICC) or the Federal Power Commission (FPC). But he is more independent. On the federal level, I would think it impossible to avoid making him a judicial official because so many of the complaints would be of a judicial nature. And it may eventually be necessary for the states to grant him judicial powers as well, so that he could deal effectively with corrupt or incompetent judges, of which each state has an ample number (usually elected ones), and so that he could ensure that police do not exceed their legal authority. In some states, the latter are often the direct cause of riots and other disturbances by their use of raw power when gentler tactics would work better. Policemen themselves admit this; they lack training in how to deal with the public.[10]

The American constitutional system is one of checks and balances, and each branch checks and balances the other so that, in the end, power is evenly distributed and no branch can arrogate to itself more power than the Constitution assigns to it. But who would check the federal Ombudsman? To whom would he report? Who would control him? Granted that independence is necessary, may he not become too independent? Can one rely entirely on the hope that he does not abuse his powers?

I think that we need not fear a too-powerful Ombudsman if the legislation establishing the office clearly delineates his powers, and does not vest in him any authority beyond that of investigation, recommendation, prosecution, and publicity. He should not be able to enforce his own decisions. He should not be able to change an administrative decision, no matter how erroneous, stupid, or wicked. His authority should be to inquire and, with the help of a subpoena, to check all pertinent records, to interview personnel involved, to make his findings public, to make recommendations, and to prosecute. Since he would be a creature of all three branches of the federal government he would be responsible to all three, and subject to removal only by the Congress on the recommendation of the President with the approval of the Supreme Court, which selected him in the first place. The federal Ombudsman would not be a fourth or fifth branch of the government, but an official of the order of, say, the Solicitor General; but he would have a number of deputies, perhaps one for each state, and a fairly substantial staff of former judges and lawyers well versed in United States law.[11]

WHAT WOULD THE OMBUDSMAN DO?

Perhaps I should have begun with this question. But I am assuming that the educated layman has a fairly accurate idea of what an Ombudsman does. He is, in a sense, the post office for all kinds of complaints by irate or injured or disturbed citizens who feel that some government agency has treated them unfairly—whether or not the complainant is mistaken. He then examines the complaint to determine whether or not it is valid. A vast number of complaints are ignored because they need not be acted on. Let me cite some illustrations from two Ombudsman countries, Sweden and New Zealand. Addressing the Assembly Interim Committee on Government Organization of the State of California, on March 1, 1966, the Swedish Ombudsman, Alfred Bexelius, engaged in the following exchange with Assemblyman Jack T. Casey of Bakersfield:

"Mr. CASEY. You mentioned . . . that about nine-tenths of the cases are thrown out with no foundation, and so about how many complaints would the other one-tenth amount to over a period of a year?

"Mr. BEXELIUS. There are 1,200 complaints every year and that means only——

"Mr. CASEY. Ninety per cent are thrown out, so 120 a year.

"Mr. BEXELIUS. But many of these complaints have been thoroughly investigated before they are thrown out.

"Mr. CASEY. And . . . there is only one Ombudsman in Sweden?

"Mr. BEXELIUS. Yes."[12]

In New Zealand, a much smaller country than Sweden, the Ombudsman there reported that of the 1,100 complaints during the first year, he "acted" on 434 "in the first six months and 760 in the following year."[13]

To be effective, the Ombudsman must be armed with power of subpoena and must have complete access to all pertinent records. If needed, he must be free to attend proceedings which bear on the case under study. He should have the authority to investigate on the spot, to ascertain what the circumstances are, and to question all personnel involved. It should be understood by those who complain as well as by those who are being investigated that the Ombudsman will make his findings public, and that whether he does so or not is not a matter of his discretion but of law; for publicity is often the strongest deterrent. As Mr. Bexilius pointed out to the author of this article: "The real value of the JO lies in the fact that his mere existence is often enough to discourage bureaucratic abuse."[14]

THE PROBLEM OF U.S. POPULATION SIZE

Is this country to big for an Ombudsman, or even several Ombudsmen? How could one man, or even a staff of men, handle the enormous amount of complaints that would descend on such an office? Americans are notorious complainers. Litigation in this country reaches staggering proportions in one year and exceeds anything that could be handled by present federal courts. So how could it be sensible—or reasonable—to establish another office that would deal not with legal, but with civil matters? Would not such an office simply be overwhelmed, even if, say, 90 per cent of the complaints were weeded out as redundant?

This is a distinct possibility during the first years. Maybe the first five or six years would have to be devoted primarily to acquainting Americans with the proper use of the office, but with the help of the mass media, it could be done. Already, millions of Americans have a fairly good idea of what an Ombudsman is. A radio station in Los Angeles is known as "your Ombudsman station," and it investigates complaints involving government bureaus. Many people complain against private companies and against other individuals, but the idea is gaining hold that complaints should be those directed against government agencies. Once people get into the habit, as they have in Sweden, it will be as natural to register a complaint against the government and hope to see results as to complain, to a particular company, against a product.

Two hundred million Americans may still prove to be too many for an office of this kind, and it may have to be modified to suit America's peculiar situation.[15] For example, I am not convinced that an American Ombudsman could or should investigate the courts. The federal court system is, to begin with, such a gigantic establishment that it is hardly subject to effective review. This must be done by other means, through a combination of public alertness, the press, and political intervention. But even when the courts are left out, what is left may still be too big for the Ombudsman alone to check; so it might be necessary to limit his function and jurisdiction, as determined by the legislature. Thus, if the office is brought under control, a federal Ombudsman might be a useful functionary to perform some duties necessary in the constitutional scope of things.[16]

CONGRESSIONAL REFORM GROWING AS MATTER OF PUBLIC INTEREST

HON. DONALD RUMSFELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1969

Mr. RUMSFELD. Mr. Speaker, the lead article of the April issue of the Reader's Digest is titled "Is Congress Destroying Itself?"

This title of the article by Eugene Methvin of the magazine's Washington, D.C., staff is harsh, but it is also provocative.

Expanding on the headline, Mr. Methvin expresses the fear that "unless Congress modernizes its procedures and organization, it will destroy itself as a crucial force in our constitutional system."

He centers his argument on what he considers five major weaknesses in existing congressional operations—inadequate staffing, failure to deal with the information explosion, poor evaluation of the programs Congress has legislated, a committee system that often works at cross-purposes, and decisionmaking behind closed doors.

Many Members of Congress would agree with the general thrust of this reasoning. In fact, nearly 100 Members of the House of Representatives already have demonstrated their determination to take steps to begin to correct some of these deficiencies by cosponsoring H.R. 6278—The Legislative Reorganization Act of 1969.

H.R. 6278 would improve the staff situation by assuring adequate staff for minority members on committees, by providing for the use of outside consultants by committees, and by strengthening the operations of the Legislative Reference Service.

It would help Congressmen get on top of the information explosion by broadening the use of computer-based analytical and data handling techniques in the Legislative Reference Service and the General Accounting Office. The legislation would also charge a new permanent Joint Committee on Congressional Operations with keeping abreast of changes in information technology.

It would strengthen the hand of Congress in evaluating governmental programs by more sharply defining the oversight function of committees and by improving the capacity for program analysis in the General Accounting Office.

It would deal with the committee jurisdiction problem by making it a specific area of study for the new joint committee.

And H.R. 6278 would rule out decisionmaking behind closed doors by providing for more open committee meetings, public disclosure of committee votes and rollcall votes on all appropriation matters.

None of the cosponsors of H.R. 6278 would argue that all weaknesses in the congressional structure would be solved by this legislation, but it would be a beginning. And the bill would provide for continuing scrutiny of congressional operations by a joint committee, which surely will arrive at further recommendations in future Congresses.

There is a growing public awareness of the need for congressional reform, and widely distributed articles like the one in Reader's Digest will increase that awareness.

Legislative reorganization is becoming a major national issue, because the people are beginning to demand that Congressmen use the best techniques and procedures available to cope with the problems of our modern society.

The Reader's Digest article follows:

IS CONGRESS DESTROYING ITSELF?

(By Eugene H. Methvin)

"Obsolete"—"inefficient"—"slitting its own throat." Every day these and harsher words descend upon one of the most important institutions in the free world, the U.S. Congress. The attacks come from worried citizens—journalists, political scientists, students of government, state and local officials, disillusioned voters. Most significantly, concern is now growing within the halls of Congress itself. Scores of Republicans and Democrats alike who cherish the historic value of our legislative branch realize that it is in serious trouble.

"Congress has bogged down in trivia and inaction," declares Sen. Hugh Scott (R.-Pa.). Sen. Sam J. Ervin (D.-N.C.), chairman of the Subcommittee on Separation of Powers, after lengthy hearings and study is convinced that Congress "increasingly abdicates its responsibility to determine policy and to set standards." Adds Rep. Jack Marsh (D.-Va.), "Congress is in danger of becoming merely a rubber stamp for programs proposed by the executive branch."

What these and countless other thoughtful citizens fear is this: *Unless Congress modernizes its procedures and organization, it will destroy itself as a crucial force in our constitutional system.*

No one questions that Congress has passed landmark legislation, uncovered and helped remedy grievous national ills, and produced a legion of statesmen and leaders. But certain entrenched weaknesses are crippling Congress. Only by a close, frank examination of shortcomings can the public understand the need for the sensible reforms now being pressed by Congressional members of both parties.

Since 1961 Congress increased federal dollars for manpower training ninefold, spawning 15 programs administered by eight agencies pumping out $2.25 billion this year. But the situation is "little short of chaotic," says Garth Mangum of the George Washington University Center for Manpower Policy Studies. "Individual acts were written, considered and amended in rapid succession to meet current crises with little attention to their interrelation."

After 18 months of wrangling, the House approved the income-tax increase President Johnson recommended in January 1967. As a price for this tax hike, the House demanded a $6-billion budget cut. Challenged by the President to specify where the cuts should be made, Congress would not. Instead, it left the details to be decided by the President's Budget Bureau. Thus, the people's elected representatives bucked to non-elected bureaucrats their constitutional duty to set priorities for spending our tax dollars.

Not until almost two years after Congress authorized hundreds of new anti-poverty programs and "community action agencies" did the executive branch try to determine how existing government efforts were affecting the poor. I asked the systems analyst who supervised the research, "How could Congress legislate sensibly without having such facts?" "It couldn't," he told me. "Without this information it was like throwing money out the window hoping some would blow to the poor." Concludes Daniel Moynihan, President Nixon's top urban adviser and a veteran of the 1964 White House task force which designed the $7.7-billion War on Poverty: "Many men in the Executive Office and in Congress, men of whom the nation had a right to expect better, did inexcusably sloppy work. *The government did not know what it was doing.*"

Why can't Congress respond more effectively to the challenges of our day?" It is impossible for us as now organized to discharge our constitutional duties of making policy for and overseeing the executive branch," declares Rep. Bill Brock (R.-Tenn.). Here's why:

1. Inadequate Staffs. No Congressman has adequate help for his incredible array of duties. Democrat John Tunney represents 567,000 Californians. Offices in each of his two counties require full-time secretaries. In Washington he receives 200 letters daily, half of them requiring contacts with federal agencies on constituents' problems and occupying three staffers full time. Two more secretaries plus two part-time girls answer correspondence and send out a newsletter to Tunney's constituents. His "legislative assistant" must write press releases and handle other chores. Result: not one person on his staff of ten can devote full time to legislation, research and program evaluation.

Committee staffs present an even more dismal picture. The House Appropriations Committee has a catch-all Subcommittee on Independent Offices that must decide on money bills totaling $17 billion for 23 agencies ranging from the National Aeronautics and Space Administration to the Department of Housing and Urban Development. For their gargantuan job these six Democrats and four Republicans have only three staffers! "Even if we conscientiously try to decide

whether a program is useful and operating within legal limits, we have to trust to dumb luck to ask the right questions," one member told me.

For all their work our legislators vote themselves $135 million out of the $184-*billion* federal budget. They appropriate three times as much annually to support an executive-branch army of 6800 publicity agents. Prof. Samuel Patterson of Iowa State University found that Congress has only 588 committee staffers. Yet the "executive lobby" wooing legislators on behalf of federal agencies numbers well over a thousand. The U.S. Department of Agriculture has more bill drafters than the entire House legislative counsel. Senate and House Armed Services committees have only 40 staffers to oversee our vast $81-billion defense operations, while the Pentagon maintains 272 "legislative liaison" officers.

2. Information Explosion. The average Congressman puts in a 60-hour week during legislative sessions, an American Political Science Association study found: 15 hours on the House floor, 11 in committee, 24 on constituent requests, postmasters, military-academy appointments and such. He has ten hours left for studying legislative issues.

Yet ponder the maelstrom he faces! Members dropped 29,133 bills into the last Congress's hoppers and voted 1002 of them into law. Their 1967 debates filled 36,420 pages of the *Congressional Record*, triple the number when Congress last renovated itself by the Legislative Reorganization Act of 1946. The Government Printing Office last year alone ground out 248,152 pages of printed committee testimony, the equivalent of 287 *Gone With the Wind*-length novels, plus 27,000 pages of committee reports and recommendations, more than the 23-volume *Encyclopaedia Britannica*.

Finding out *anything* in this flood is ridiculously difficult. Is it any wonder that, in one survey, 78 percent of the legislators queried rated "lack of information" as the No. 1 problem preventing them from executing their duties satisfactorily?

3. Poor Evaluation. One of the great reforms supposedly attained by Congressional reorganization 23 years ago was specified provision for overseeing and evaluating programs already legislated. Indeed, the General Accounting Office (GAO) was specifically commissioned to perform expenditure analyses. But Congress never voted the money to give GAO the manpower to do the job. Worse, a survey shows that the 20 House committees do not themselves systematically evaluate programs under their jurisdiction. "We vote all these programs and money and do not follow through carefully to see what the impact of our actions is," Rep. John Brademas (D.-Ind.) complained to the Joint Committee on Organization.

4. Crazy-Quilt Committees. The 535 members of the House and Senate divide themselves into 36 committees, 376 subcommittees, plus uncounted boards, commissions and caucuses. Senators average 20 assignments each, Representatives seven. This tangled maze of jurisdictions defies rational, comprehensive policy-making. In the House 18 committees oversee one or more educational programs scattered over 42 agencies, dispensing upwards of $10 billion. One committee considers new highways to bring more cars downtown, and another works on mass transit to keep cars out. Funds are appropriated for the reclamation of Southwestern desert so that bumper cotton crops may be grown—at the same time Southeastern farmers are paid to retire their acreage to prevent surpluses. Says Rep. Fred Schwengel (R.-Iowa): "No single unit of Congress is looking across the board at the sum of the nation's goals and resources."

5. Closed Doors and Deals. Committee chairmen guard their domains like Oriental satraps, arrogating crucial decisions the House should make after thorough debate. The 1946 Legislative Reorganization Act requires open hearings unless a majority specifically votes otherwise, but chairmen frequently disregard it. Foreign and military affairs may require secrecy. But does the House Agriculture Committee require secrecy in 53 percent of its meetings? Protests former Rep. Tom Curtis (R.-Mo.), "Legislative hearings should be open so people can see just how badly some of these programs have been mismanaged. Congressional secrecy is a scandal."

Indeed it is. By monopolizing crucial data behind closed doors, chairmen and senior committee members are able to monopolize crucial policy decisions, leaving rank-and-file members in the dark on many complex issues. This kind of power pays off in a cozy spoils-system alliance that often soaks the taxpayer and ignores the country's real needs. Thus, it is not strange that the Departments of Housing and Urban Development should shower rural DeKalb County, Tenn. (population 12,000), with "Model City" grants to the tune of $4.7 million, ahead of 147 real cities. DeKalb's foremost native just happens to be Chairman Joe L. Evins of the House subcommittee that oversees HUD's appropriations.

What can be done? Plenty.

Save Time on Votes. Today, ringing bells in legislators' offices announce a roll-call vote. As clerks on the House floor laboriously call the 435 names, members scurry through the tunnel connecting the three House office buildings to the Capitol. Frequently they have to ask a colleague for a quickie description of the pending issue. In this antique ritual, requiring half an hour, the House cast its 478 record votes during the 90th Congress. Electronic voting, already used in 33 state legislatures, could slash this time-consuming procedure to a fraction, freeing harassed legislators of the equivalent of *two calendar months* of floor sessions!

Make Information Swiftly Available. Today's legislator cannot even get a daily list of all Capitol Hill hearings, and must wait weeks for the impossibly verbose printed transcripts, relying meanwhile on sketchy press accounts.

The 310-man Library of Congress staff now serving our legislators could, if augmented and armed with modern information technology, bring order to this Capitol Hill confusion. Every legislator could have on his desk each morning, through a remote computer terminal in his office, a complete list of all meetings scheduled for the coming day, plus summaries of the previous day's testimony and even digests of every article in the many periodicals coming into the Library that matches his computerized personal "interest profile." On any roll call, he could have via television an instant summary of the issue, the bill's sponsors and legislative history, voting positions recommended by the President and majority and minority party leaders—research requiring hours now.

Florida's legislators, computerized for four years, can have daily an "instant electronic scorecard" on the status of 5100 pending bills. A Pennsylvania legislator can tap out a question on an IBM typewriter keyboard and instantly obtain on a small television screen results of a computer search of every state law, or specified clauses in all 50 state constitutions. New York State Sen. Jeremiah Bloom asked his legislature's computer: "Give me all the laws affecting banking that are not in the banking law." The machine spewed forth 1604 laws, a task that would take trained staff lawyers weeks with pastepot and shears.

Improve Evaluation. Impatient with Congressional failure to oversee programs already passed and with the House blockade on modernization, Sen. Winston L. Prouty (R.-Vt.) and others amended the poverty legislation in 1967 to require the GAO to make a special evaluation. (The more than 150 investigators will report this spring.) But GAO itself opposed a similar Congressional attempt on the fragmented manpower training efforts because its staff, already strained by the antipoverty study, would have to neglect regular auditing duties.

One proposal is to create a separate "Office of Legislative Evaluation," possibly in GAO, staffed by social scientists armed with the best computer systems and statistical sampling techniques to do "evaluative research" on how people are affected by government programs. "A new source of knowledge is coming into being," testified urbanologist Moynihan, "and this should not remain an executive monopoly. The executive is exposed to the temptation to release only findings that suit its purposes." Such an office might well have spotted trends in the welfare, farm and educational programs in the 1950s that foreshadowed the crime wave and urban riots of the 1960s. Congress could thus have been alerted to the need to change directions.

Press for Modernization. Congress in 1965 created a Joint Committee on Organization, co-chaired by Rep. Ray J. Madden (D.-Ind.) and Sen. Mike Monroney (D.-Okla.), who pushed through the 1946 reorganization. Six Democrats and six Republicans from the House and Senate spent more than a year examining legislative procedures and oraganization. They unanimously recommended a reform package including a modern information system, restrained powers of committee chairmen, more adequate staffing and improved legislative evaluation.

In 1967, the Senate, after six weeks of debate, approved modernization by a vote of 75 to 9. But the entrenched powers of the House, led by Speaker John McCormack, 77, last year would not even permit the bill to come to the floor for consideration. This year, dozens of Democrats and Republicans, led by Rep. Donald Rumsfeld (R-Ill.), are pushing modernization. Though Representative Rumsfeld's bill, H.R. 6278, would be only a modest beginning it would at least create a permanent committee to institute continuous improvements in legislative machinery and procedures.

Congressional modernization is no substitute for tough-minded legislators who do their homework, ask the hard questions and demand no-nonsense answers. But it can help them by reducing diversions and confusion, and arming them with expert help in marshaling the facts that can illuminate complex decisions. What happens to H.R. 6278 involves nothing less than the issue of whether we shall be ruled by elected representatives or a bureaucratic elite. Find out how your Congressman and Senators stand on H.R. 6278 today—and let them know how you feel about it.

WHERE ARE THEY NOW?

HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1969

Mr. BERRY. Mr. Speaker, I am inserting in the RECORD an editorial recently appearing in the Sioux Falls (S. Dak.) Argus Leader which, I think bears wide publication.

The bleeding hearts can well ponder the question of the one-sidedness of this war in Vietnam. Is it wrong for the civilians in South Vietnam to suffer, while we are required to protect the civilians in North Vietnam?

The article is as follows:

WHERE ARE THEY NOW?

Remember, a few months ago, the hue and cry which could be heard from various "anti-war" protesters concerning the bombing by the United States of military targets in North Vietnam?

The cry "stop the bombing" could be heard from one end of the world to the other. Even U.N. Secretary General U Thant joined the chorus.

Where are they now when the North Vietnamese and their Viet Cong allies are making concerted attacks by mortars and other large weapons on civilian areas of Saigon and other South Vietnamese cities?

Most of recent assaults on the cities have been deliberately aimed at the civilian population, apparently in an attempt to create panic and confusion.

American targets in the North, by contrast, were concentrated on military installations, to the point that some were avoided because they were too close to civilian centers.

VIOLENCE AND THE NEW LEFT

HON. LOUIS C. WYMAN

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1969

Mr. WYMAN. Mr. Speaker, the tendency of the New Left to advocate resort to violence as a political tactic is increasingly disturbing to those who believe in continued freedom for America. Violence is not the answer to anything except perhaps defense against aggression. The lot of even the less fortunate in the United States presents no just cause for violence. Even the poorest citizen of this Nation is rich in constitutionally protected freedoms that he will lose for sure if the anarchists prevail.

The country needs a law making it a Federal offense to incite—or commit—violence in support of any objective no matter how conscientiously motivating it may be to the actor. Then it needs enforcement without regard to the race, color or station in life of the offender. Bombing ROTC facilities, passing out pamphlets instructing how to prepare fire bombs, or train mines, or how to make homemade explosives; these things are truly un-American. The actors should be identified and prosecuted, for their deeds undermine the cornerstone of our Nation—liberty under law.

Even more contemptible are those who masquerade as social benefactors yet use their position to encourage criminal action, or things that will inescapably and predictably lead to crime. No longer can those who repeat this pattern be excused as crusaders for civil rights. The vast majority of Americans, white, Negro, or what have you have civil rights, too, and they are not about to sit back idly and watch them go down the drain.

In this connection I commend a thoughtful reading of a recent article in Roll Call, the magazine of Capital Hill, by their extremely capable editorialist Allan C. Brownfeld, entitled "Violence as a Political Tactic":

VIOLENCE AS A POLITICAL TACTIC

(By Allan C. Brownfeld)

Violence, in a short period of time, has moved from an occasional aberration and disturbance to a political tactic, endorsed by many leaders of the New Left, by leaders of the new black nationalist movement, and by others who feel disaffected and disillusioned.

During his recent news conference, President Richard Nixon said that he had asked John N. Mitchell, the Attorney General, and Robert H. Finch, the Secretary of Health, Education and Welfare, to look into the problem of disorder on the nation's campuses. He did so, the President said, "particularly in view of a Congressional report that 122 of the 540 that had been arrested at San Francisco State College were direct recipients of Federal funds."

But the question, in the long run, is far more complex than this. The political tactic of violence has resulted in many overt and covert acts, the full import of which is yet to be understood and assimilated. There are, of course, the major incidents, such as the take-over of Columbia University and the disorder which was precipitated in Chicago. These bear careful analysis. But there are many, often unreported, incidents of what their perpetrators term "sabotage."

The Institute of Science and Technology at the University of Michigan was rocked by an explosion last October 14. The bombing was the thirteenth to hit the Detroit area since August and came only two weeks after extensive damage forced the closing of a semi-secret C.I.A. recruiting office in a downtown Ann Arbor office building.

Ann Arbor Police Chief Walter Krasny has claimed the series of bombings may be the work of "anti-Establishment militants" at the University of Michigan, while Detroit officials blame "hippies" for the explosions. The far-left National Guardian reported that "Reaction to the bombings in the Ann Arbor radical community has ranged from quiet amusement to fantasy to increased discussion regarding the nature and timing of revolutionary chaos and terrorism and their possible relation to politicization of young people and/or mass repression of the radical movement. While some feel that such violence will help increase the consciousness of students, others feel that the level of awareness is now so low that the bombings will do little . . ."

The Cleveland riots of July, 1969, according to Federal investigators, were the product of a black nationalist conspiracy. Key figure in the conspiracy, the experts say, was Fred "Ahmed" Evans, a local black power leader who has been linked with the pro-Peking Revolutionary Action Movement. Evans, who was arrested during the riots, was charged with shooting to kill. "If my carbine hadn't jammed I would have killed you three," police quoted him as saying. "I had you in my sights when my rifle jammed." Evans told police that he and 17 others had organized the sniper attacks that resulted in the deaths of three policemen. Told that three of his snipers had been slain, Evans said, "They died for a worthy cause." Phil Hutchings, militant head of the Student Non-Violent Coordinating Committee, told newsmen that the Cleveland outbreaks were "the first stage of revolutionary armed violence."

Violence is often proclaimed as the only means by which society can truly be cleansed. The Rev. William Sloane Coffin, convicted this summer of conspiring to violate draft laws, delivered his first sermon of the academic year at Yale University in praise of change, even if change comes in violent ways. He told 300 persons, mostly students, that "life is change, growth, love and readiness to suffer." The Rev. Coffin warned that the current condemnation of violence by political leaders may also be a condemnation of change. He stated: "Jesus, when he threw the money changers out of the temple was no more violent than (Columbia radical student leader) Mark Rudd."

Following this advice, a new publication, Mayday, has appeared. Making light of the violence which has shaken a number of campuses it led off its fourth issue with this verse: "Sabotage, This Is Number One and The Fun Has Just Begun." Edited by Andrew Hopkind, James Ridgeway, and Robert Sherrill, its November 8, 1968 issue included the following: "The war began last winter on the Western front, in the rainy season. The guns of February were four Molotov cocktails thrown at the Naval ROTC building on the Berkeley campus of the University of California. . . . The first attack on the Berkeley ROTC building was followed by the burning of a similar center at Stanford. At about the same time, electric power cables strung over the Berkeley hills were cut. Then, three giant electric towers in Oakland were blown to the ground leaving 30,000 houses without power and stopping work at the Lawrence Radiation Laboratory at Berkeley. A few days after the tower was destroyed, a University of Colorado drop-out student turned himself in to publicize his 'crime.' 'I had to do something to stop their machines—so maybe they would listen, so that this war would be stopped,' he said."

The majority of those who advocate violence either to change the system or to improve its shortcomings are unaware of the historical consequences of violent upheavals. George Bernard Shaw wrote that "Revolution never lightens the burden of tyranny, it simply shifts it from one shoulder to another." That violence is the solution to our current difficulties is, observing the historical record, very unlikely.

Crusades which initially seek to throw off the fetters of an old order have, in most instances simply replaced them with new fetters. The French Revolution led to the Reign of Terror, the Russian Revolution to Stalin, the Chinese revolution Mao Tse-tung. The tyrannies which follow violent revolutions have been infinitely more brutal than the autocracies they replaced.

Modern rebellion has been linked very closely with ideologies which seek to explain man on the basis of one or another theory of human behavior. But man is infinitely complex, and it is doubtful that any theory about man's behavior can adequately explain it, or can effectively predict its future course. Western thought has, for some time, been engaged in explaining man in one manner or another. Both Marx and Freud discussed man's social unconscious, and stated that man's consciousness is determined by the "logic of the historic process."

With regard to the theories of Marx and Freud, those which perhaps had the greatest impact on Western thought, Erich Fromm has made this assessment: "It is the rule rather than the exception in the historical process that ideas deteriorate into ideologies. The ideology, while still using the words of the original idea, in effect expresses the opposite meaning . . ."

Those who advocate the necessity for the use of violence to effect a particular social change are often deeply committed to one ideology or another. Such commitment lies at the root of the rise of modern totaliarianism. This judgment is presented by Hannah Arendet in her important study, Totalitarianism: "Ideologies—isms which to the satisfaction of their adherents can explain everything and every occurrence by deducing it from a single premise—are a very recent phenomenon. . . . In their claim to total explanation, ideologies have the tendency to explain not what is, but what becomes, what is born and passes away . . . in this capacity ideological thinking becomes independent of all experience from which it cannot learn anything new . . . since the ideologies have no power to transform reality, they achieve this emancipation of thought from experience through certain methods of demonstration."

Violence has resulted in less freedom and more repression, and violence imbued with ideology has pursued with a vengeance ends which have made means such as genocide, inquisitions, and slave labor camps acceptable.

One of Nazism's sympathizers announced: "When I hear the world culture, I draw my revolver." Those who call for violence today are also drawing their revolvers. The road to tyranny is paved with idealism. We know this. We have been there before.

GOVERNOR REAGAN PLACES CAMPUS CHAOS IN CONTEXT

HON. BURT L. TALCOTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1969

Mr. TALCOTT. Mr. Speaker, Gov. Ronald Reagan, of California, submitted a statement on March 19, 1969, before the Special Subcommittee on Education of the House Committee on Education and Labor.

Governor Reagan's statement is the most thorough and perceptive statement I have yet seen relating to the campus chaos which our universities, students and taxpayers are suffering today.

Governor Reagan's problems with the college campuses have been the most severe of any Governor. Governor Reagan has had the most experience with campus disorders, militant radicals, and subversive teachers, students and campus trespassers.

I believe his statement should be read by every public official and every citizen who is concerned about our educational institutions and the fulfillment of his responsibility to teach, research, and serve.

I insert Governor Reagan's testimony at this place in the RECORD, prior to the publication of hearings of this subcommittee, because his understanding of the problem is extraordinary and the urgency for general understanding of the problem is crucial to university officials and legislators:

STATEMENT OF GOV. RONALD REAGAN

Madam Chairman and members of the subcommittee, to attempt to analyze in a brief time the significant factors which have brought about our current campus problems must do an injustice to the complexities of the situation. However, one of the main factors of our dilemma is a general lack of information and understanding of the total problem by much of the public. I wish to commend this committee on its endeavor to shed light on these problems and to assess the means for resolving them. Our educational institutions are the key to individual growth and to the progress of our society. Your efforts are particularly appropriate at this time because it is only through the cooperative efforts of public officials at all levels of government, as well as campus administrators, faculties, and students, that our educational institutions will be guaranteed the ability to carry on their responsibilities for teaching, research and service.

As I am sure you are well aware, there is a wealth of misinformation and the widest range of interpretation of the causes of coercion and violence spreading to campuses throughout the land. We are faced with circumstances which have never before confronted our society. People are groping for explanations without experience to guide them and it is too easy to make generalizations. We also have the added confusion of "Mythologies"—some developed by well-meaning apologists for the antisocial behavior of a few, and others apparently put forth by those in revolt, who seek to make their excuses acceptable through sheer repetition.

Today's situation did not come about overnight. In California it is the culmination of activities which have transpired over the past ten years. At first there were occasional episodes of mass disruption. The protests against the House Committee on Un-American Activities in 1960 in San Francisco were followed by months of romanticizing the role of the protestors in literature, speeches, recordings, and conferences. In 1963–64 there were mass sit-ins in hotels, automobile agencies, and banks over alleged discrimination in employment practices. In 1964–65 there were similar disturbances at newspaper offices and restaurants. During these years, the campuses were used as "launching pads" for action in the surrounding community. The Berkeley campus of the University of California was most frequently involved.

Beginning in 1964, rather than serving as the launching pad, the campus itself became the focus of attack. In September and October, 1964, a floor of the Berkeley campus administration building was "captured." The staff of the Dean of Students' Office was forced to flee over the roof of the building. A few days later, a police car was captured and held for 32 hours, one of the longest episodes of mass interference with due process of law. The police car and its occupants were finally released after negotiations and major concessions to the mob by University officials. In December, the entire administration building was occupied by more than 800 persons, and was held until police cleared the building by making mass arrests. The pretext for these major disorders was first related to the demand to use campus facilities for collecting funds for political purposes; later the slogan "free speech" was introduced.

Since 1964, the tempo of disruption has rapidly increased until there is rarely a day that a campus somewhere in California is not in difficulty. The campuses have been in constant turmoil: the Berkeley campus of the University of California, and, during the past few years, San Francisco State College.

Certain trends are evident. There has been a shift in tactics from nonviolence to planned and announced violence. There has been a shift from mass confrontation to guerrilla tactics with beatings, the disruption of classrooms, shootings, bombings, arson and general vandalism and destruction. Initially, the participants in these incidents were primarily from the campus although they represented only a small minority of students and faculty. More recently, their ranks have been swelled by large numbers of outsiders who have no legitimate connection with the campus. Mobility between campuses has increased and just recently in California even high schools have beocme heavily involved in disorders.

Following a half million dollar fire on the University of California campus in Berkeley, an editorial appeared in the San Francisco *Examiner* of January 24, 1969. I quote:

"The arsonist-set fire at Wheeler Hall Auditorium on the U.C. Berkeley campus sets a new high in the wave of criminal violence perpetrated during current strikes and attacks against bay area educational institutions and educators.

"Here is a partial catalog of recent crimes, including some involving potential murder:

"February 9, 1968: four firebombs damaged naval ROTC building at U.C. Berkeley.

"February 19, 1968: flammable liquid set fire on porch of naval ROTC building at Stanford, causing $35,000 damage.

"May 7, 1968: naval ROTC building at Stanford destroyed. Will cost $70,000 to replace.

"July 15, 1968: a $100,000 fire destroyed the office and irreplaceable effects of former Stanford president Wallace Sterling.

"August 6: two fires were set in the Stanford student activities office.

"September 14: a bomb blasted the naval ROTC building at U.C.

"December 11: a firebomb was hurled at the administration building at San Francisco State College.

"December 13: College of San Mateo students smashed windows and broke crockery in the college cafeteria.

"January 5: shots were fired into a San Mateo home in the mistaken belief it was the residence of a college trustee, endangering life.

"January 7: the home of Philip C. Carlington, Sr., former Dean of Instruction at the College of San Mateo, was severely damaged by firebombs. He and his family were lucky to escape with their lives.

"January 10: firebombs were thrown into the home of Edwin Duerr, coordinator of internal affairs at San Francisco State. One failed to go off. If it had, Duerr, his wife and three children would have been killed or gravely injured.

"January 16: a firebomb was defused in the state administration building. It would have killed anyone within 25 feet.

"January 17: a mob of strikers smashed windows and crippled the sprinkler system in a rampage at San Jose State College.

"January 20: two firebombs exploded on the U.C. campus.

"Those who see nothing but high moral purpose behind the current campus violence are invited to re-read the above."

Just as there have been trends in militancy there have also been pattern of response to destructiveness. Campus administrators have typically been slow to act and quick to concede. Often they belatedly call in the police only when real danger becomes all too apparent.

In California today, there is continuous concern at all levels of government, including the governing boards of the universities and colleges, about campus problems and violence. The concern of all is for the protection of students, for the integrity of the learning process, and for society itself. It is tragic that the campus, which has represented a forum for expressing differences of opinion, for the pursuit of truth, and for the peaceful resolution of problems, has now become the arena for oppression by revolutionaries, vandals and arsonists.

It may seem incomprehensible that a portion of our population—including some students, some faculty members, and outsiders—are attempting to overthrow our democratic way of life. It is equally incomprehensible in a democratic society—which is the pinnacle of man's dream for self-government and dignity—to find so many of its citizens standing mute and helpless while their basic values and processes are assaulted. Students of Plato and other political philosophers should today recognize a condition long anticipated: when the majority does not function, our society falls into the hands of the most cunning or the most powerful.

For some time, the climate of our society has not been conducive to the most responsive and responsible citizenship. I need only cite the letdown which followed World War II as such periods follow all wars—a sort of recess from social responsibility following a time of total commitment to a cause larger than ourselves. The prosperity which then followed led to affluence for the great middle class—that group which historically has set our basic standards of behavior and attitude. Affluence often leads to self-centered behavior and a smaller chance of experiencing maturity and good judgment. It weakens pride in meeting challenges and lessens cooperation among individuals.

Also the recent advocacy of so-called "right" and "wrong" ways for rearing children has had profound effects. Parents, who since the dawn of history found in their hearts what was right and found in their heads what made sense were undercut and lost confidence in their relationships to their

children. Who can estimate the effect on a child who finds his parents consulting a book to make decisions instead of confidently and directly stating what they believe?

The knowledge explosion which has brought us some great benefits also has a hidden cost. There is too much to know: specialization follows and people become less sure of their own opinions. Those values that human beings need—and indeed what our culture requires—have been challenged. When moral standards become doubtful values become negotiable. When even some clergy question the existence of God mere mortals become anxious.

In the past few decades, progress in agriculture, business and industry has led to the replacement of men by machines. It also has reduced the opportunities for youth to discover the gratifications of real work with real purpose. Consider the opportunities for positive work experience when, in the first decade of this century, 90 percent of our young people lived on farms. Now only six percent have these opportunities. Consider the shortage of labor supply in 1900 when it was necessary to pass child labor laws to protect our youth so they could stay home or go to school. In wisdom and compassion, we passed those laws. But today it is the fortunate seventeen-year-old who can find a job during summer vacation, let alone find full-time work.

All of these changes—and there are more—have operated to make people less sure of themselves. When unsure, it is natural to withdraw. It can be no surprise that we speak of a "silent generation," that we find a growing distaste by youth for competition, that we find individuals less willing to stand apart from the crowd.

A democratic society depends upon an active majority of "civilized" individuals, who express, each in his own way, the values of the culture. In this way, traditions of fair play, of freedom of speech, of equal opportunity to learn, even of the right of life, are protected. A democratic society develops laws largely to protect individuals from the extreme behavior of those who are not bound by the cultural values and who are not persuaded by the normal expressions of approval and disapproval by their peers.

It is obvious—but so important that it bears repeating—that as an increasing number of citizens refuse to become involved, society for its survival must depend increasingly upon law enforcement. Law enforcement becomes a substitute for the moral suasion previously exercised by the people themselves.

There is general agreement that a small percentage of our society is responsible for coercion, threats and violence on our campuses. There is agreement that the behavior of a relative few infringes daily upon the rights of the many. There is agreement, too, that quality education—the pursuit of the truth wherever it may lead, of the opportunity to hear the widest variety of viewpoints on issues—has suffered terrible damage in the past six or seven years. That disturbances have occurred more on some campuses and in some states than others provides no reassurance, because the spread is rapid not only nationally but also locally from colleges into high schools and junior high schools and out into surrounding communities.

Those who speak and write about the increasingly coercive minority reveal their own confusion, and add to the confusion of others, by the descriptive terms they use: "protestors," "demonstrators," and "activists". These terms suggest those persons are engaging in activities normal to American life. Is this normal dissent? Just listen to the words of their leaders:

Devereaux Kennedy, student body president of Washington University, said:

"I want student power to demand 'revolutionary reforms' that can't be met within the logic of the existing American system.

"I'm going to say loudly and explicitly what I mean by revolution," he continued. "What I mean by revolution is overthrowing the American government, and American imperialism, and installing some sort of decentralized power in this country.

"This," he added, "is going to come about by black rebellions in our cities being joined by some white people. People in universities can do a number of things to help it. They have access to money, and they can give these people guns, which I think they should do. They can engage in acts of terrorism and sabotage outside the ghetto. Negro people have trouble getting out because they cordon those areas off, but white activists can go outside, and they can blow things up, and I think they should.

"But," he concluded, 'that's just a minor part of it. We must start up fifty more Vietnams. The major thing student activists can do while all this is going on is to completely demoralize and castrate America."

Ewart Brown of Howard University said: "I think we agree that the revolution is necessary, and that you don't conduct a revolution by attacking the strongest enemy first. You take care of your business at home first, and then you move abroad. Thus, we must make the University the home of the revolution . . ."

Our confusion has been deliberately planned: the banners under which militancy moved were, first, "Abolish HCUA"; then, "Fair play for Cuba," then, "Free speech" at Berkeley; next, anti-US-Vietnam policy (often indistinguishable from pro-Viet Cong). Now, we have demands for autonomy in determining staffing, admittance to campuses and all matters relative to students of ethnic minorities. Yet, throughout this sequence we learn that much of the leadership is the same. After the assassination of President Kennedy, the "Fair Play for Cuba" Committee disappeared and new groups, with the same leadership, were formed.

When Mario Savio was the spokesman for "free speech" in California he was also referring, in a New York publication, to the issue of free speech as somewhat a pretext—the silver iodide you put in the clouds to make the rain fall!

The Vietnam "teach-ins"—and who is against teaching?—were, in fact, almost uniformly a series of provocative speeches presenting only one side.

We have noted that there has been a rapid shift in tactics from nonviolent coercion to the advocacy of and the use of violence. There also has been a corresponding increase in openness in word and deed—the success of violence has bred arrogance.

It is apparent that there is also a roving leadership which appears on campus after campus and in close relationship to accompanying disorder National publications of *SDS*, Black Panthers and other new groups exhort the closing of institutions, destruction of facilities, and the silencing of opposing viewpoints.

Instructions for constructing bombs and how to place them are now commonplace.

In a situation with the majority of students and faculty all too silent, and with a relentless minority of students and faculty (now with outside reinforcements) becoming increasingly effective in harassment and in distortion of the academic environment, we have prevalent college administrations who have proved themselves consistently ineffective.

Typically, we find negotiation, compromise and concession—usually without reference to, or even in the face of, the expressed desire of the majority of students or faculty.

It is argued that there is danger of "escalation" when campus authorities assume their responsibility to enforce laws and regulations. There is fear that in response to authority, other students and faculty will join the participants. To rationalize their permissiveness and appeasement, administrators themselves often promote myths which confuse those both on campus and off. They speak disparagingly of "generation gap" at a time when too many parents are in awe of, and tend to imitate, their own children. They speak of a "new breed with wisdom and conscience" at a time when research has clearly indicated a social and emotional immaturity of youth to a degree previously unknown (although linked with better scholastic preparation).

Administrators speak of "freedom" when they are describing license. And whereas a few years ago they insisted that, for the protection of institutions of higher learning, partisan political activity not be launched from within academic facilities, they now rationalize the use of these institutions by militants for highly partisan purposes as "relevant education."

A few years ago, administrators and faculty members jealously guarded the schools' entrance requirements. They now—under pressure and with good intentions—admit a number of students so underprepared that they can only fail. It should be no surprise that those facing failure react with hostility and frustration, and seek radical change in curriculum in an attempt to remove the threat posed by their inability to attain even minimum standards of performance.

One cannot fault administrators who use tact, whose responses are determined in part by a sense of timing and circumstance, and who recognize fully that irrational, forceful response without explanation and fairness can have only unfortunate results. One must fault, however, total abdication of leadership.

Failure of administrative leadership silences further a majority which is unsure and which is seeking support and guidance. On our campuses with the most turmoil the percentage voting in student body elections is so low that student publications and student government have become the possessions of the militants—the silent majority has no representation.

I might interject here, however, that there have been in recent weeks a few responsible efforts to find voice for the moderate majority. These efforts should be given every encouragement. Sadly we must also note, however, that there have been a few examples of "vigilante-type" conduct by extremists. Continued nonsolution will result in new forces on the scene, some of them dangerous.

It is true that regardless of social climate or social change, basic human nature remains the same. Unless limits are set, unless adults provide models for youth to emulate, unless there is reasonable discipline which with experience becomes internalized and leads to "self-discipline," man will become once again only an animal. A culture will revert to a jungle if there are no traditions, values and laws which are respected and defended. Without these, only might will make right.

These tragic circumstances have continued too long. On some campuses it may be too late for a sure solution even if thoughtful and courageous administrators are found. It has already become necessary in California to pass new laws and to rely on law enforcement to a degree not excepted and never desired.

In considering laws to govern campus behavior and the use of law enforcement in our campuses, it is important to recall the words of Dr. Hayakawa, who stated: "In a democratic society, the police are there for the protection of our liberties. It is in a totalitarian society that police take our liberties away."

One of the purposes of these hearings is to inquire into the effectiveness of provisions of the higher education amendments of 1968,

and in various appropriation acts directed at the elimination of federal aid to students who violently disrupt the functioning of a college or university.

I welcome such provisions if they be fair and effective. On some of our campuses we are informed that a disproportionate number of students receiving federal aid have been involved in disruption. This probably results in part because militants have been using demands for ethnic studies as the vehicle for confrontation and disruption. Withholding federal monies would surely serve as a deterrent and would hopefully redirect protest into appropriate channels. Also of importance is that public confidence in such programs will be further reduced if they are, or are believed to be, the source of disorder.

May I suggest that it would be helpful if there were greater uniformity among various programs concerning the procedures for withholding aid to those who disrupt. Also, it may be necessary that such provisions be absolutely mandatory so that they will not be thwarted because of pressures on administrators or by current administrative style. Since the withdrawal of government assistance will often be tantamount to removal from the campus, in the interest of fairness as well as of responsible administration, campus officials should be urged to be equally concerned about those who commit violence who are not receiving aid.

I stated earlier my support of these provisions if they are effective. Too often students have heard threats which are not followed through. This leads to disrespect for appropriate authority, including the authority of government. An escalation of threats with no subsequent action leads to an escalation of violence with no concern for results.

Again, my gratitude to you and to your committee. I wish to offer you the complete assistance of the State of California in your pursuit of our common goal.

It is my heartfelt wish that your action will be of help in protecting students and faculty, as well as all of our educational institutions, in their vital mission of serving our society.

THE ENZYME—LYSOZYME

HON. THOMAS M. REES

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1969

Mr. REES. Mr. Speaker, a distinguished constituent of mine, Dr. Alfred T. Sapse, has recently sent to me the text of a speech on a subject of vital importance to us all. Dr. Sapse is associated with the University of California at Los Angeles in the department of bacteriology as a special research fellow. His present 3-year project is called "Smog Eye Irritation Experimental and Clinical Studies" involving a National Institute of Health grant of some $190,000. To be investigated are the eye tissues most exposed to smog, such as the tears, cornea, conjuntive, lacrimal glands. This is the first of several articles to be released as the study progressses. Dr. Sapse's speech of March 5, 1969, follows:

THE ENZYME-LYSOZYME

The March issue of *Fortune* magazine has brought to the surface something that has been developing, steadily and quietly, almost unnoticed, in the field of medical research. It deals with the life-saving promise of enzymes, and is concerned with something which I believe, truthfully, will open a new era in medicine.

Today, I would like to acquaint you with the first enzyme discussed in this article, one which, undoubtedly in the near future, will be the most talked about—*Lysozyme.*

Lysozyme is an enzyme discovered accidentally by Sir Alexander Fleming in 1922—the same Fleming who six years later discovered penicillin, also "accidentally."

Lysozyme is the body's own antibiotic. It is considered to be in the body's first line of defense. It is present throughout the body anywhere the danger of infection or other injuries is most likely to occur. It is present in tears, skin, saliva, bronchial secretions of the lungs, and in the white cells of the blood.

Like penicillin, the discovery of Lysozyme didn't arouse too much excitment initially. Lysozyme was left dormant for many years until scientists suddenly became aware of it. I won't bother you too much with its description—how its molecule of 129 amino acids was discovered, or how Lysozyme kills bacteria. That is for the biochemists. It is important though, that in some forms of leukemias, lysozyme in the blood serum is present only in very low levels. It was, therefore, possible to detect these forms of leukemia by measuring lysozyme-in-serum. Also, when human kidneys were transplanted, scientists while checking for the presence of lysozyme-in-urine, found that they were capable of detecting the early symptoms of kidney rejection.

Cow milk differs from maternal human milk, in that it contains no lysozyme. Some eye infections are accompanied by the lowering or even total disappearance of lysozyme levels in tears. Recently, it was demonstrated by two groups of scientists that lysozyme levels in human tears were lowered when the eye was subjected to smog eye irritation; also, in experimental studies, lysozyme in lung secretions was observed to be inactivated by ozone—a smog component.

The list of uses for lysozyme as a diagnostic tool is long, ranging from measurements of Lysozyme in the serum for the detection of damage by irradiation, to the low levels of lysozyme found in the early stages of viral hepatitis.

This initial presentation demonstrates how Lysozyme may be useful in the *detection* of a variety of diseases.

In the following talks, I shall discuss how Lysozyme can be useful in many other ways to human and animal welfare.

A FORWARD MARITIME POLICY FOR THE UNITED STATES

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 24, 1969

Mr. HOSMER. Mr. Speaker, the dangers to the national security of the United States inherent in the Soviet Union's massive naval shipbuilding program are widely recognized. Perhaps not so well known are the national security implications involved in the Soviet's accelerated programs in the merchant marine, oceanography, and fisheries.

One of the authors of a significant report on "The Changing Strategic Naval Balance: U.S.S.R. Versus U.S.A.," which was published last December, was Dr. James D. Atkinson of Georgetown University.

Based on that experience, Dr. Atkinson has now prepared a paper on the Soviet challenge in the merchant marine. He also makes some recommendations regarding U.S. response to this challenge which I believe should be important reading for Members of this body. The paper follows:

A FORWARD MARITIME POLICY FOR THE UNITED STATES

(Presented by Dr. James D. Atkinson, professor of government, Georgetown University, at a luncheon sponsored by the AFL–CIO Maritime Trades Department, Washington, D.C., Jan. 22, 1969)

THE STRATEGIC NAVAL BALANCE

The naval balance study

In early December 1968, the House Committee on Armed Services published a study entitled "The Changing Strategic Naval Balance: USSR vs. USA." This study was prepared for House Armed Services by a special committee of the American Security Council on which I served. This carefully researched paper pointed out that the burgeoning Soviet merchant marine served to enhance Soviet attainment of strategic objectives on the oceans of the world and that this constituted one of the significant developments of our times. The study emphasized that the Soviet effort was both qualitative and quantitative and noted that "four out of five Russian merchant ships are less than 10 years old, whereas four out of five of the U.S.-flag vessels are of World War II vintage or older!"

Continued Soviet momentum

Since the publication of this report, the trend has been for continued upward movement of the Soviets on the high seas. There are many examples of this continuing Soviet thrust at sea, but these are especially interesting:

(1) On 26 December 1968 the official Soviet news agency Tass stated that "the Soviet Merchant Marine has firmly taken the world's sixth place this year" and that one more line had been added "to the score of regular services. It links the ports of the Baltic with Australia."

(2) On 6 January 1969 Tass stated that meetings had begun that day between the Soviet Union and East Germany in order to coordinate their maritime policy including that "on the international freight market." With the recent example of Soviet rate cutting on Australian cargoes, this report is highly suggestive for future Soviet and bloc policy.

(3) On 9 January 1969 Moscow Radio announced that ten ships of the Soviet merchant navy had arrived in Havana, Cuba, and that a record number of Russian ships would be plying the sea route to Cuba this month.[1]

(4) On 14 January 1969 press reports revealed an historic first for the Soviet merchant marine. It was stated that the first *regular shipping service* by the USSR to North America's Pacific Coast had begun with the over 14,000 ton *Ostrogozhsk* (built only 4 years ago), one of three Soviet ships to be in service from British Columbia to Japan. Significantly, this is a third country service, *not* a Soviet home port operation.

PROJECTIONS FROM THE NAVAL BALANCE STUDY

There are, of course, a number of projections which could be made from "The Changing Strategic Naval Balance." The following, however, appear to have special relevance to the fields of merchant marine, oceanography and fisheries:

General projections

(1) *The Maritime Psychological Gap:* Of prime importance is the closing of the mari-

[1] In another part of the world, the Mediterranean, the Soviet capability—greatly assisted by merchant shipping—for exploiting trouble spots was indicated by the statement in Pravda on 11 January 1969 that "the USSR has always taken a firm position of supporting Arab peoples."

time psychological gap. For too long the American people have been told—by the prophets of gloom and doom—that it is useless for the United States to make a maritime effort, because other countries can build and operate more efficiently. A logical examination of this claim leads, of course, to a *reductio ad absurdum*. For, if we accept this kind of defeatism, it follows that, very shortly, we cannot make an effort in the fields of electronics, in steel, or in textiles. All of these fields are challenged from overseas as is our maritime enterprise.

Furthermore, a recent example indicates that American labor and management in the maritime field are performing far more efficiently than the critics would have us believe. I cite the sad case of the Queen Elizabeth II, not as a criticism of the grand maritime tradition of Britain, but, rather, as, by contrast, emphasizing what America is doing and can do at sea.

The London *Daily Telegraph* stated (1 January 1969) of the Queen Elizabeth II that there were "minor defects, mainly electrical, in 900 of the 1,000 cabins." Their correspondent went on to say that "plumbing is bad in several cabins and one can wade in inches of water. Shower attachments are missing. The taps on baths are also missing. In some cases attachments in bathrooms have come away in people's hands." Far more serious were the faults in two turbines. The *Daily Telegraph* of 8 January 1969 reported these were even more serious than it was first believed and that the chairman of Upper Clyde Shipbuilders "refused to give a completion date for the ship." [2]

(2) *National Need vs. Cost-effectiveness:* Closely associated with the maritime psychological gap is the myth of maritime cost-effectiveness. A myth, because the U.S. maritime posture should, in truth, be related to national need, not to cost-effectiveness *alone*. The U.S. merchant marine has been steadily deteriorating. And the British merchant marine—upon which many of our exporters and importers have placed reliance—now appears to be headed towards a sharp decline. Can we believe that the Soviet Union will be so conscientious that, in future, it will refrain from taking advantage of what will be a geopolitical fact of life? If this should come to pass, would the American voter ask whether the policy had been cost effective?; or would he ask why was not something done?

Specific projections

(1) *Merchant Marine:* In "The Changing Strategic Naval Balance" we point out that "a vital factor in the Russian merchant marine expansion is the total of national resources devoted to this oceanic enterprise. In 1965, the Soviet government devoted more than $600 million to the construction of merchant vessels. The United States spent only $150 million in the same year. These figures make clear the different priorities that the Soviet Union and the United States assign to a vital segment of sea power."

It would appear, therefore, that a minimum program by the United States to restore the merchant marine balance would be the building of 50 ships per year for the four-year period fiscal 1970 (calendar year beginning 1 July 1969)—fiscal year 1973. This is a minimum program; indeed, in view of the growing magnitude of the Soviet effort, it may be necessary to review this number and project a total of 250 instead of 200 U.S. built merchant ships, that is, 50 in each of the first two years and 75 each in the latter two years. Based on national need, 50 per year for the four-year period would certainly appear to be a minimum number.

(2) *Oceonographic:* The arrival in Leningrad last October of the new oceanographic research ship *Akademik Vernadskiy* is in many ways symbolic of what needs to be done to redress this part of the maritime balance. This ship, built in East Germany for the USSR was reported to have made its first voyage (and where it may still be operating) not in seas adjacent to Russia, but in the Atlantic Ocean. The *Akademik Vernadskiy* becomes one of an increasingly large fleet of oceanographic ships given the task of both basic and applied research on the seas of this great globe. For the Russians realize that while outer space is, of course, very important, the liquid space of the world's oceans is in the long run of equal importance and, in the short run, may be—at various times—of even greater importance.

A modest program in oceanography, therefore, would be the tripling of the present approximately 3700 people in the field of ocean studies and the building of four oceanographic ships—exclusive of undersea research ships for here we should, perhaps, have a crash program—per year over a four-year period from fiscal 1970 onward.

(3) *Fisheries:* The magnitude of the task facing us here is too well known to require more than brief comment. A comparison with Soviet priorities is relevant. In the past fourteen years the USSR put *$4 billion* into its fishing fleet-shoreside plant complex. In the same period, a goodly part of the U.S. fishing fleet became museum pieces. It would hardly be imprudent to suggest that we either directly spend or indirectly use tax incentives to provide, over a four year period, at the very least, one-half the average yearly amount of the Soviet expenditure

SUMMARY

In short, what is at stake is not only a significant industry—and important the maritime industry certainly is—but, much more, a vast sector of the U.S. national security. This sector embraces the inter-related mix of naval, merchant marine, oceanography-marine resources, and fishing fleet-shoreside plant complexes. If the American people can be shown the overriding importance of this maritime complex, the evidence indicates that they will ask, indeed, may even demand, that their country adopt and implement a forward maritime policy.

[2] The British are not alone. The *Daily Telegraph* of 17 January 1969 reported that "a faulty turbine in the West German passenger ship Hamburg, 23,500 tons, has delayed its test run and speed trials for two weeks . . ."

HOUSE OF REPRESENTATIVES—*Tuesday, March 25, 1969*

The House met at 12 o'clock noon.

The Chaplain, Rev. Edward G. Latch, D.D., offered the following prayer:

My defense is of God, who saveth the upright in heart.—Psalm 7: 10.

O God, who art a strong tower of defense to those who put their trust in Thee, have mercy upon us as we bow in prayer before Thee and gird us for the experiences of this day. Grant that in moments of low moods and in minutes of high moods we may keep our faith in Thee in whom alone true life is to be found.

Forgive the ways we have placed shackles about ourselves and others, the intolerance we have shown when others differed from us, the envy we have revealed when some have received what we thought we deserved, the prejudices we have mistaken for principles, and the ill will generated at the success of others. May we pray not only to be forgiven but to learn to be forgiving.

Amid the perplexities of this period may we always remember to be kind and generous, understanding and upright in heart, knowing that he who lives in Thy spirit and who keeps Thy commandments is walking in the way of truth and love—the best defense our Nation can ever have.

We pray in the spirit of Him who walked the way of the loving heart. Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Arrington, one of its clerks, announced that the Senate had passed without amendment a bill of the House of the following title:

H.R. 8438. An act to extend the time for filing final reports under the Correctional Rehabilitation Study Act of 1965 until July 31, 1969.

The message also announced that the Senate had passed bills and a joint resolution of the following titles, in which the concurrence of the House is requested:

S. 301. An act for the relief of Sein Lin;

S. 348. An act for the relief of Cheng-huai Li;

S. 537. An act for the relief of Noriko Susan Duke (Nakano);

S. 628. An act for the relief of Koon Chew Ho;

S. 648. An act for the relief of Ernesto Alunday;

S. 672. An act for the relief of Charles Richard Scott;

S. 713. An act to designate the Desolation Wilderness, Eldorado National Forest, in the State of California;

S. 742. An act to amend the act of June 12, 1948 (62 Stat. 382), in order to provide for the construction, operation, and maintenance of the Kennewick division extension, Yakima project, Washington, and for other purposes;

S. 743. An act to authorize the Secretary of the Interior to construct, operate, and maintain the Touchet division, Walla Walla project, Oregon-Washington, and for other purposes;

S. 927. An act for the relief of Victor Abadi;

S. 958. An act for the relief of John Anthony Bacsalmassy;

S. 1011. An act to authorize appropriations for the saline water conversion program for fiscal year 1970, and for other purposes;

S. 1016. An act for the relief of Dr. Richard Francis Power;

S. 1049. An act for the relief of Dr. Angel Solar;

S. 1120. An act for the relief of Wong Wah Sin;

S. 1123. An act for the relief of Ah Mee Locke; and

S.J. Res. 28. Joint resolution providing for renaming the central Arizona project as the Carl Hayden project.

The message also announced that the Vice President, pursuant to Public Law

86–420, appointed Mr. MANSFIELD, chairman; Mr. HARTKE, Mr. DODD, Mr. MONTOYA, Mr. NELSON, Mr. BAYH, Mr. GRAVEL, Mr. ALLEN, Mr. AIKEN, Mr. FANNIN, Mr. MILLER, Mr. MURPHY, and Mr. SAXBE to be members, on the part of the Senate, of the U.S. group to attend the Mexico-United States Interparliamentary Conference to be held in three cities in Mexico from April 2 through April 9, 1969.

The message also announced that the Vice President, pursuant to title 22, United States Code, section 276, appointed Mr. SPARKMAN, chairman; Mr. YARBOROUGH, Mr. YOUNG of Ohio, Mr. HART, Mr. JORDAN of North Carolina, Mr. WILLIAMS of New Jersey, Mr. HOLLINGS, Mr. ALLOTT, Mr. THURMOND, Mr. MATHIAS, and Mr. SCOTT to be delegates on the part of the Senate to attend the Interparliamentary Union Meeting to be held in Vienna, Austria, April 7 through April 13, 1969.

The message also announced that the Vice President, pursuant to Public Law 87–758, reappointed Mr. PROUTY as a member of the National Fisheries Center and Aquarium Advisory Board.

BILL TO ALLOW SMALL BUSINESS TO RETAIN MORE EARNINGS

(Mr. STEED asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. STEED. Mr. Speaker, I am today introducing a bill, the principle of which has been repeatedly endorsed in the past by the House Committee on Small Business, of which I am a member, and its Senate counterpart.

This measure would permit a tax deduction of up to $30,000, or 20 percent of net income for the taxable year, whichever is smaller, for money plowed back into a business for additional investment in depreciable assets, inventory and accounts receivable.

This would extend the principle of the 7-percent investment credit, adopted in 1962, which has worked so well in producing jobs, from the manufacturing to the retail and service fields, by the inclusion of inventories and receivables.

I first endorsed this concept more than 10 years ago after intensive hearings of the Small Business Committee conducted here and in various parts of the country.

Need for the bill was never better stated than by the Ways and Means Committee in a report at that time:

> One of the greatest problems confronting small and medium-sized businesses is the acquisition of sufficient capital to modernize and maintain a rate of expansion competitive with larger companies. Small business must rely largely on retained earnings for modernization and expansion. Thus, there is a need to allow small business to retain more earnings to provide the funds necessary for growth.

This measure is one of several I intend to sponsor in connection with the overall review of the tax structure now underway. The first was introduced last week, increasing the personal income tax exemption from $600 to $1,200.

CORRECTION OF VOTE

Mr. DENT. Mr. Speaker, on rollcall No. 23 I am recorded as not voting. I was present and voted "yea." I ask unanimous consent that the permanent RECORD and Journal be corrected accordingly.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

PERMISSION FOR COMMITTEE ON RULES TO FILE CERTAIN REPORTS

Mr. MADDEN. Mr. Speaker, on behalf of the Committee on Rules, I ask unanimous consent to have until midnight tonight to file certain reports.

The SPEAKER. Is there objection to the request of the gentleman from Indiana?

There was no objection.

SPACEMEN SHOULD PLANT U.S. FLAG ON THE MOON

(Mr. MICHEL asked and was given permission to address the House for 1 minute.)

Mr. MICHEL. Mr. Speaker, it is with some amazement that I have read press reports that the National Aeronautics and Space Agency is debating what kind of flag U.S. astronauts will place on the surface of the moon when they land there this summer.

It is inconceivable to me that any flag other than Old Glory should even be considered. Press reports have indicated that a U.N. flag is being pressed by some. This, of course, would give the Communist nations a full share in what is essentially an all-American project.

The taxpayers of this country have put up $20 billion in what has openly been called a race to the moon. There have been three deaths of fine young men. There have been many risks, many daring and dangerous exploits leading up to this effort to make a successful lunar landing.

I feel it would be a travesty and a doublecross of the astronauts and the American public if any other flag than the U.S. flag were planted on the moon by our spacemen. I do not think NASA need debate that issue any longer.

PERMISSION FOR SUBCOMMITTEE ON ELECTIONS, COMMITTEE ON HOUSE ADMINISTRATION, TO SIT DURING GENERAL DEBATE TODAY

Mr. BOGGS. Mr. Speaker, I ask unanimous consent that the Subcommittee on Elections of the Committee on House Administration may be permitted to sit during general debate today.

The SPEAKER. Is there objection to the request of the gentleman from Louisiana?

There was no objection.

PERMISSION FOR COMMITTEE ON BANKING AND CURRENCY TO SIT DURING GENERAL DEBATE TODAY AND TOMORROW

Mr. BOGGS. Mr. Speaker, I ask unanimous consent that the Committee on Banking and Currency may be permitted to sit during general debate today and tomorrow.

The SPEAKER. Is there objection to the request of the gentleman from Louisiana?

There was no objection.

RESIGNATION FROM COMMITTEE

The SPEAKER laid before the House the following resignation from a committee:

MARCH 21, 1969.

Hon. JOHN W. MCCORMACK,
Speaker of the House,
U.S. House of Representatives,
Washington, D.C.

DEAR MR. SPEAKER: I am writing to submit my resignation from the Joint Committee of Congress on the Library to which I was elected pursuant to House Resolution 263 of the 91st Congress.

With best wishes, I am,
Sincerely yours,

ROBERT J. CORBETT,
Member of Congress.

The SPEAKER. Without objection, the resignation will be accepted.

There was no objection.

COMMODITY CREDIT CORPORATION RESTORATION OF CAPITAL IMPAIRMENT

Mr. MAHON. Mr. Speaker, pursuant to the unanimous-consent agreement on yesterday, I call up House Joint Resolution 584, making a supplemental appropriation for the fiscal year ending June 30, 1969, and for other purposes, and ask unanimous consent that the joint resolution be considered in the House as in the Committee of the Whole.

The Clerk read the title of the joint resolution.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

The Clerk read the joint resolution, as follows:

H.J. RES. 584

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the following sum is appropriated out of any money in the Treasury not otherwise appropriated, to supply a supplemental appropriation for the fiscal year ending June 30, 1969, and for other purposes; namely:

DEPARTMENT OF AGRICULTURE

Commodity Credit Corporation

For partial restoration of capital impairment of the Commodity Credit Corporation for costs heretofore incurred, $1,000,000,000.

Mr. MAHON. Mr. Speaker, I move to strike out the last word.

Mr. Speaker, this is a joint resolution advancing from fiscal year 1970 into fiscal year 1969 the sum of $1 billion for the purpose of restoring impaired capital of the Commodity Credit Corporation. Due to heavy unexpected production of certain of the major crops, the Commodity Credit Corporation has on hand about $5 billion worth of commodities. As a result of this and other factors it is substantially out of cash to carry on its operations.

The reason why we have to be on the floor today to seek action prior to the Easter recess is that the dock strike has more or less paralyzed shipping and has prevented the export of commodities

held by the CCC. This has also brought on stagnation in the domestic market.

Under these circumstances we are required to ask that the capital stock of the CCC be increased by $1 billion. There seems to be no alternative. There are many aspects involved here. In view of the fact that this is an emergency situation, and we will have many opportunities later in the session to discuss in depth many of the agricultural problems which trouble us, I hope we can move along with the acceptance of this emergency resolution.

The RECORD of yesterday's session, which was available this morning, carries a full statement explaining the need for this action. The report is available. The hearings have been printed and are available.

I will be glad to yield for any question at this point.

Mr. WHITTEN. Mr. Speaker, will the gentleman yield to me?

Mr. MAHON. I am glad to yield to the gentleman from Mississippi (Mr. WHITTEN) the chairman of the Subcommittee on Agricultural Appropriations, the subcommittee which handled the hearings on this resolution and which handles the regular appropriations in this field.

Mr. Speaker, I ask unanimous consent to proceed for an additional 5 minutes.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. MAHON. Mr. Speaker, I now yield to the gentleman from Mississippi.

Mr. WHITTEN. Mr. Speaker, I wanted to say to my chairman that our committee, as he well knows, did hold extensive and rather complete hearings on the financial situation.

The committee recommends the budget request contained in House Document No. 91–76 for a supplemental appropriation of $1 billion to restore capital impairment of the Commodity Credit Corporation for losses heretofore incurred. This resolution, which merely moves this amount forward from the budget for fiscal year 1970 into fiscal year 1969, will not expand the total appropriations presently requested for the Commodity Credit Corporation through fiscal year 1970.

The action recommended by the committee is made necessary by a serious financial situation currently facing the Corporation. Despite the use of every financial resource available to the department, it is apparent that the Corporation's capital funds are about to be exhausted. The most current estimates indicate that the balance available on March 18, 1969, will finance the Corporation's programs for another 10 days at the present rate of expenditure.

Since carrying out the Nation's price support programs is mandatory under the law and Commodity Credit Corporation expenditures are therefore uncontrollable, it is essential that the recommended funds be provided to assure continued operation of the price support and related programs of the Corporation. None of these funds are provided for personnel and other administrative expenses.

The increased demands on the Corporation's borrowing authority were caused by large unanticipated increases in crop production, particularly in feed grains, wheat, and soybeans, and decreases in exports. Lower market prices, along with the increased supply, have resulted in higher quantities going under loan and in lower repayments.

The nationwide dock strike, which started last December 20 and is still in progress at the gulf coast ports, also has added uncertainty to the commodity markets and has slackened the demand for agricultural commodities.

These additional demands do not represent a final cost to the Corporation. They, in effect, represent an investment in commodities held by the Corporation as security for loans or commodities to which the Corporation has title. As of March 7, 1969—the latest date available—the value of commodities on hand and under loan is estimated at $5.1 billion. Of this amount, Commodity Credit Corporation has title to $1 billion and has $4.1 billion pledged for loans.

So it is a case of having money invested in commodities, with the borrowing authority tied up in secured loans, as the distinguished gentleman from Texas (Mr. MAHON) stated earlier.

The Commodity Credit Corporation was organized under the laws of Delaware, and later organized under the laws of the United States. It has all the normal functions and powers of a corporation: to buy, to sell, to enter into contracts, and all the other practices followed by other corporations.

One of its prime purposes through the years has been to maintain a proper relationship—as was the intent of Congress—between the agricultural, industrial, and labor sectors of our economy.

The Congress has provided by law that labor can strike and organize to bargain collectively—and thereby secure a large share of the consumer dollar. Industry, too, of course, is in a position to add its profits over and above its costs, thus securing its share of the consumer dollar.

Congress, through the years, has recognized the crucial role of agriculture, as the producer of the raw material of our food and fiber, and has recognized that, unless agriculture is accorded equal treatment in law, the other two sectors of the economy would take a bigger and bigger share of the consumer's dollar, leaving less and less for the farmer.

The vehicle through which the Congress has tried to achieve this objective is the Commodity Credit Corporation. Under the law, the Corporation is charged with the responsibility of carrying out the farm program. It gets its money from borrowing authority provided by the Congress, through the sale of its commodities, and in other ways. The appropriations from the Congress are made annually only to reimburse the Corporation for losses sustained in its operations during earlier time periods. The Corporation operates from day to day on its borrowing authority.

It should also be noted that the Congress has failed to restore the Corporation's capital impairment that occurred in 1961. This impairment amounts to more than $1 billion. I think it would make sense for us to restore that impairment at this time, since the Corporation is in financial difficulties. CCC has the obligation under law to purchase commodities and grant loans to farmers on their crops. If the Corporation's officers do not do this, they are violating the law, and yet if they do do it, and the Corporation does not have any money or borrowing authority left, they will also be violating the law.

Mr. CONTE. Mr. Speaker, will the gentleman yield?

Mr. MAHON. I yield to the gentleman from Massachusetts.

Mr. CONTE. I thank the chairman, the distinguished gentleman from Texas (Mr. MAHON), for yielding to me at this time.

We are considering today whether or not to pass House Joint Resolution 584 which would make additional appropriations available for the Commodity Credit Corporation. The distinguished chairman of the House Appropriations Committee, has explained the purpose of this resolution in yesterday's RECORD—page 7162. As Chairman MAHON pointed out, the Commodity Credit Corporation has reached the limit of authorized spending authority, namely $14.5 billion.

Last year I introduced an amendment to H.R. 17126 to limit farm subsidy payments to a maximum of $20,000 a year per farmer. The amendment was adopted by this House, then dropped in conference. It was adopted by this House because the inequities and the inappropriateness of the present farm subsidy program had been clearly demonstrated.

I believe as strongly today as I did then, that our farm program is outmoded, that it is unfair, and that it must be revised.

The question before us today is whether to authorize an additional $1 billion for the Commodity Credit Corporation. This money is needed in order that contracts already entered into between the CCC and individual farmers can be fulfilled. To deny this money would be to breach existing and binding contracts and I have no intention of taking any action today which might interfere with the fulfillment of these contractual obligations.

I want to make perfectly clear, however, that I similarly have no intention of abandoning the effort which was begun last year.

At the first appropriate time I intend to again introduce my amendment placing a $20,000 maximum on farm subsidy payments. I certainly hope furthermore that all of those who supported me last year will back this limitation again.

I stated last year and let me repeat it today—there is simply no justification today for the taxpayers of this country paying hundreds of millions of dollars to large and prosperous farmers for not farming their land.

I would like to serve notice here and now that I intend to continue this battle until we have been successful—until we have eliminated the unfair subsidies which now exist and have developed new agriculture programs and policies to meet the challenges of today.

Mr. MAHON. I thank the gentleman for his cooperation in this present situation and for holding his amendment for the future.

Mr. LANGEN. Mr. Speaker, will the gentleman yield?

Mr. MAHON. I yield to the distinguished gentleman from Minnesota.

Mr. LANGEN. It is generally known to the membership of this House that I am usually not very enthusiastic about supplemental appropriation bills. The one before us today, however, seems to be of such importance and of such character that it warrants our immediate support and passage. Were we not to do so, many serious hardships would be created throughout rural America, and the economic effects would be such that they would adversely affect the entire Nation.

Mr. MAHON, chairman of the full Committee on Appropriations, and Mr. WHITTEN, chairman of the Agriculture Subcommittee on Appropriations, has, as usual very ably, eloquently, and specifically outlined for the House of Representatives the need and provisions of the legislation before us. Permit me to briefly elaborate further.

I stated at the outset that the bill was of such urgency and character that it warrants our immediate support. The committee report, which is available to every Member, sets forth the urgency in noting that this supplemental appropriation of $1 billion is to restore the capital impairment of the Commodity Credit Corporation for losses incurred during this fiscal year in order to alleviate the serious financial situation which currently faces the Corporation.

The character or provisions of this bill are such that it merely moves forward from fiscal year 1970 to fiscal 1969 $1 billion so that the total appropriations presently requested for the Commodity Credit Corporation through fiscal year 1970 will not be increased at this time. Testimony before the subcommittee indicated that the balance available on March 18, 1969, to the Corporation would finance its programs only for another 10 days at the present rates of expenditure. These are the moneys that are used for our Nation's price support programs, which are mandatory under the law, and unless additional moneys are provided at this time, the continued operation of price support and related programs could not be carried out during the remainder of this fiscal year, and so would constitute a breach of promise on the part of the Government to the many thousand participators in these programs throughout the Nation. None of these funds are used for personnel or other administrative expenses.

It would be a reasonable question to ask why has this action become necessary. Last year your subcommittee did its best to provide adequate funds for the Commodity Credit Corporation on the basis of the information and statistics that were available to us at that time. In fact, we had the assurance of the department at that time that there might be anywhere from a billion-and-a-half to $2 billion of moneys available for unforeseen circumstances. Factors beyond our control, however, which have already been identified brought demands that were far beyond any reasonable anticipation that these moneys would be needed in these amounts at this time.

Let it also be thoroughly understood that it is not the fault of the present administration, nor is it the fault of the past administration, but has rather come about because of factors that are beyond the control of any administration and are substantially unpredictable. It is most unfortunate that those who have just taken over the management of these important programs should be confronted with the inheritance of this problem.

The problem is serious because of the economic hardships that would be created for individual farmers as well as all of rural America. It is well known that the economic plight of American agriculture is severe enough as it is without further aggravation. If this bill is not passed to provide the additional moneys, it will mean that all price support and related programs will of necessity have to be discontinued because of a lack of money with which to carry them out, even though the commitments have been established by law to farmers throughout the land. This would result in an economic calamity and great injustice to farmers who in good faith have signed agreements to comply with the programs enacted by the Congress and recommended to them by their Government. Gross inequities would result because many farmers have already completed these transactions as compared to others who are presently in the process of completing their loans and preparing for the coming spring season.

The moneys involved in these programs are most essential to all farm operations around the country, and with the high cost of operation, it is most important that these moneys should be available to them or many would have real difficulty in continuing to operate their farms during this coming production season. Farmers throughout the Nation are having difficulty enough at this time in sustaining their operations for the coming year because of a lack of operating funds. It is just as unfortunate at this time that the Farmers Home Administration does not have funds available for operating or emergency loans, even though our committee and the Congress did appropriate last year more adequate funds for these purposes. However, the Budget Bureau, in spite of continuous urging by Congress, myself included, have withheld $25 million of operating loan funds, and I understand there is still $19 million more that could be provided under last year's appropriation for emergency loans. This further aggravates and increases the need for the approval by the House of this supplemental appropriation today. To not provide these moneys for the Corporation would have far-reaching economic effects in that it would force many people to move grains and agricultural commodities on the markets at accelerated rates which would only further depress the already too low prices, and so reduce farm income even below the present unacceptable levels.

Another question might be properly raised—What are the elements that have caused this emergency need for money by the Commodity Credit Corporation at this time? I have already stated that the problem has been brought about by numerous factors which were not controllable by either the Corporation or the participants in the respective programs affected. Let me identify a few of them.

Last year crop production throughout the country was at exceptionally high levels and so there were substantial increased volumes of crops and commodities that are subject to the various price support programs. This fact in itself brought a substantial increase in the number of loan requests. The demand for loans was further increased by the fact that a large grain crop depressed prices to the point where it became necessary to make further use of the loan program, all of which brought extra demands on the moneys available for these purposes as administered by the Commodity Credit Corporation.

Adding to these adverse conditions was the national dock strike which started last December 20 and is still in progress at the gulf coast ports which prevented and held back the normal amount of shipments to foreign countries.

With the limited amount of moneys available to the Commodity Credit Corporation at this time, they testified before our committee that it had already been necessary for them to place a hold on shipments under the Public Law 480 program. These actions, of course, have already affected the markets throughout the country and if permitted to continue, will further aggravate the problems that are already so evident. Testimony before the committee indicated that we might have lost as much as $200 million worth of exports which cannot be recovered. Besides the increased production and reduced foreign shipments of feed grains, wheat, and soybeans, cotton has also presented an unexpected problem. While cotton production was down about 2.1 billion bales less than predicted, the present market prices are such that both domestic and export demands have dropped at the point where an extra 23 billion bales have been placed under Commodity Credit loans with an additional investment of $215 million.

The committee report identifies by language and by tables the results of these facts as they affect the demands for money of the Corporation, amounting to program increases totaling $1,686 million. Of this total $973 million occurred prior to submission of the 1970 budget and $713 million additional were added since that time.

I will include for the RECORD a summary of the program developments and the major influencing factors from the 1969 budget to the current estimates for fiscal year 1969.

Following is a summary of program developments and major influencing factors from 1969 budget to the current estimates for the fiscal year 1969:

Item	1969 budget	Current estimate	Change
Feed grains:			
Production (million tons)	167	168.1	+1.1
Season average price (corn) (per bushel)	$1.17	$1.05	−$.12
Loans made (million short tons)	11.2	18.6	+7.4
Loans repaid (million short tons)	10.9	8.2	−2.7
Advance payments, 1969 crop (millions)	$435	$336	−$99
Net outlays (millions)	$1,361	$1,842	+$481
Wheat:			
Production (million bushels)	1,510	1,570	+60
Exports (million bushels)	790	600	−190
Domestic use (million bushels)	686	750	+64
Season average price (per bushel)	$1.40	$1.22	−$.18
Loans made (million bushels)	250	440	+190
Loans repaid (million bushels)	170	160	−10
Sales (million bushels)	75.5	32.3	−43.2
Net outlays (millions)	$470	$857	+$387
Cotton:			
Domestic use and exports (million bales)	13.3	11.4	−1.9
Production (million bales)	13	10.9	−2.1
Loans made (million bales)	2	4.3	+2.3
Net outlays (millions)	$760	$975	+$215
Soybeans:			
Production (million bushels)	1,050	1,080	+30
Domestic use and exports (million bushels)	990	931	−59
Season average price (per bushel)	$2.45	$2.42	−$0.03
Loans made (million bushels)	250	340	+90
Loans repaid (million bushels)	190	130	−60
Net outlays (millions)	$167	$542	+$375
Dairy products:			
Production (milk equivalent) (billion pounds)	120.0	116.9	−3.1
Domestic use (billion pounds)	119.6	119.2	−0.4
Purchases (million)	$305	$290	−$15
Sales proceeds (millions)	$76	[1] $224	+$148
Net outlays (millions)	$245	$78	−$167
Storage facility loans:			
Loans made:			
Bushel capacity (million bushels)	41.2	300	+258.8
Value (millions)	$16	$120	+$104
Loans repaid (millions)	$16	$22	+$6
Net outlays (millions)		$98	+$98

[1] Includes sales of $111,000,000 of dairy products to sec. 32 funds.

It will be noted that in feed grains there was a production increase of 1.1 million tons, requiring an additional cost of $481 million. In wheat there was an additional 60 million bushels resulting in an additional outlay by the Corporation of $387 million. In soybeans, increased production was 30 million bushels with a net effect of $375 million of additional cost. Experience was similar with cotton, as well as other commodities, all of which brought on an additional demand for storage facility loans, costing an added $98 million.

During the course of the committee hearings, it was also called to our attention that there were other related factors that contributed to these additional outlays of money that accrued to the Commodity Credit Corporation. Statements were made to the effect that the dock strike might well have been settled much earlier had it not been for the fact that many of the strikers were participants in the food stamp program, thereby affecting the entire negotiations. It is somewhat ironic that the food supplies furnished in this manner should become a substantial factor in the costs involved to produce the food supplies to sustain the program. While it is not a subject for consideration today, it would seem that proper notation ought to be made of the effects that accrue to consumers and taxpayers alike that I am sure was not the original intention in the adoption of the food stamp program.

I am sure it is evident to everyone who has had their attention directed to these factors that I have identified for you and discussed with you briefly that in the aggregate, they amount to an added economic burden that affects the entire Nation. If we do not provide the necessary moneys today to permit the Commodity Credit Corporation to function in its normal and assigned pattern, then even further economic demands will be placed on Government, as well as all of its citizens.

It, therefore, in my judgment is of the greatest urgency that we approve the requested appropriation. This should be done without delay so that moneys will be on hand before the Commodity Credit Corporation finds it necessary to curtail any of their operations. I, therefore, urge the House to look with favor on this appropriation bill today.

Mr. GOODLING. Mr. Speaker, will the gentleman yield?

Mr. MAHON. I yield to the gentleman from Pennsylvania.

Mr. GOODLING. Mr. Speaker, I have asked the distinguished gentleman from Texas to yield to me at this time for a question.

I believe the gentleman just stated that the Commodity Credit Corporation at this time has $5 or $6 billion in commodities. Is that correct?

Mr. MAHON. A total of $5.1 billion to be exact.

Mr. GOODLING. I would like to make this observation about this very alarming figure. I would like to make it for this reason: I have in my file at the present time two letters from the Commodity Credit Corporation in which I asked them to tell me the facts regarding sales on two lots of peanuts. I would like to point out the cost involved in those sales. Within the last 3 weeks the Commodity Credit Corporation lost a cool $3 million on the two that were sold.

If we are going to sell $5 or $6 billion in the same manner and under like conditions, they are going to have to come here for many additional supplementary appropriations.

Mr. MAHON. I thank the gentleman for his observation. Of the total, about $4 billion is invested in commodities under loan with the Commodity Credit Corporation and about $1 billion represents commodity stocks owned by the Government.

Mr. FINDLEY. Mr. Speaker, I move to strike the last word.

(Mr. FINDLEY asked and was given permission to revise and extend his remarks and to include extraneous matter.)

Mr. FINDLEY. Mr. Speaker, on page 4 of the hearings on this supplemental appropriation is a table showing the borrowing authority in use by the Commodity Credit Corporation and the balance available or deficit. I draw the attention of the chairman of the subcommittee, the gentleman from Mississippi (Mr. WHITTEN) to the item which shows the balance available on June 30, 1968, as being $1.5 billion.

I will ask the gentleman if the appropriation before the House today can reasonably be expected to restore approximately the same balance on June 30 of this year?

Mr. WHITTEN. Mr. Speaker, as the gentleman well knows, we are dealing in an area where it is virtually impossible to say what will happen. It has been pointed out that about $4 billion of capital of the Corporation is tied up in commodity loans. If those commodities are redeemed the Corporation would have $4 billion with which to operate.

Unfortunately, due to the backup of commodities in the country, largely as a result of the dock strike, and very large production of certain crops in the feed grain and wheat areas, the domestic market has been very, very bad. So, being unable to sell, the producers have turned to the Corporation, and put their crops under loan with the Corporation.

So it comes back to the fact that if the market strengthens domestically—and I believe the department is giving some thought to strengthening the domestic market—it can be hoped that many of these commodities would be withdrawn, the loans to the Government repaid, and this would leave the Corporation a larger balance as of June 30 next. But I do not know how anybody can foresee at this time what is going to happen in the next few months.

Mr. FINDLEY. Mr. Speaker, I draw attention to the bottom figure of that same column which shows the figure of minus $381 million estimated for June 30, 1969. If we accept this hearing data as being substantially correct, this means that the appropriation of $1 billion will leave the available balance at only $619 million on June 30. This, as the gentleman knows, is substantially less than the balance of the year previous—almost a billion less.

The reason I mention this is because I question whether this type of procedure actually conveys fairly the budget situation for the fiscal year just ended which, of course, in a sense is the last fiscal year of the Johnson administration, as well as the fair estimate, or presentation of the budget situation which will prevail in the next fiscal year, which will be the first full fiscal year of the Nixon administration.

Had the amount requested here been $1.9 billion instead of $1 billion, then if we accept these figures as reasonably accurate the capital of the Commodity Credit Corporation impaired during fiscal 1969 would have been fully restored, so that the available money for corporation use July 1 of this year would be about

the same as July 1 of last year. As it is, figures on total budget for the fiscal years will inevitably be distorted to the disadvantage of the Nixon administration, and to the advantage of the Johnson administration.

Would the gentleman agree with me in that statement?

Mr. WHITTEN. If the gentleman will yield further, I do not believe that it can be so claimed, because the $1 billion has been moved forward from the pending budget for 1970, which could be called the Johnson budget. We are just moving it forward from then until now because in this period we have had the very heavy use of Corporation funds for loans to producers of these commodities.

Also we are going to be into our Easter recess, and the situation is a serious one, so we had no alternative whatsoever.

Mr. FINDLEY. I appreciate the seriousness of the situation.

Mr. WHITTEN. But when it comes to the prospective situation, it is difficult to answer. In 1961, as the gentleman will recall, they took inventory of the true value of the commodities, and certified the losses they had incurred. Those losses which total about $1,050,000,000 have never been restored.

So this appropriation merely restores that amount of impaired capital. But to anticipate what the situation will be the 1st of June or July, I just do not know how to go about it.

Even the figures you have made reference to on page 4 of the hearings have probably changed somewhat since they were provided.

Mr. FINDLEY. I am sure that the gentleman would have inserted a reservation in the printed hearings or the report if he had reason to question the accuracy of this minus $381 million figure.

My point is that the difference between Federal receipts and expenditures for the fiscal year that will end July 1 presents an unfair and distorted picture to the extent of nearly $1 billion, and I think it is unfortunate.

The SPEAKER. The time of the gentleman from Illinois has expired.

(Mr. FINDLEY asked and was given permission to proceed for an additional 5 minutes.)

Mr. FINDLEY. Mr. Speaker, there is another item that I would like to call to the attention of the House. That is the adverse impact on Commodity Credit Corporation resources caused by the unwise action of Secretary Freeman in maintaining the loan rate of soybeans at $2.50 per bushel long after it was evident to him that this was leading soybeans into disaster.

As a result, at the end of this marketing year, the CCC is going to have over 300 million bushels in storage representing a heavy dollar investment. Had we had prudent management of the loan rate for soybeans under Secretary Freeman, this costly problem never would have developed. Now Secretary Hardin has taken what I think is a courageous and statesmanlike approach to the problem of soybeans by dropping the loan rate.

He has also announced that he will not sell the Government soybean stockpiles on the market during the next year in order to give the market an opportunity to make the adjustment which is wrecking market prices—action necessitated by the folly that Secretary Freeman put across. This will cost money, the CCC will have to tie up funds amounting to at least a billion dollars in inventory and loans, a use of Government funds which would have been totally unnecessary except for Freeman's soybean folly.

As we evaluate the circumstances which today lead us to the necessity of appropriating an extra billion dollars for the operations of the Commodity Credit Corporation, in all fairness, we ought to allocate a great measure of the blame for this unfortunate event at the doorstep of the former Secretary of Agriculture. At the same time we should salute the new Secretary who has taken this courageous step to try to right the wrong of yesterday.

Mr. MICHEL. Mr. Speaker, will the gentleman yield?

Mr. FINDLEY. I yield to the gentleman from Illinois.

Mr. MICHEL. I would like to comment on the gentleman's earlier observation with respect to the balance at the beginning of the next fiscal year that will be on hand by the Commodity Credit Corporation even with this supplemental appropriation of $1 billion.

Actually, to have a cushion of just $600 million for the Commodity Credit Corporation is not very much. As a matter of fact, on some days transactions of the Commodity Credit Corporation can total $200 million in 1 day's activity.

I should like to point out to the gentleman that when the current fiscal year's regular appropriation bill was on the floor of the House, we were given to understand that there would be a $2 billion cushion, and I am speaking of the kind of figures and estimates as they were presented to us. But it shows how quickly outdated they become, particularly in view of the dock strike and the accumulation of commodities by the Commodity Credit Corporation to the point now where a $2 billion cushion has shrunk down practically to a minus figure and with this billion dollars, it will be down further for the new fiscal year.

If I may make one further point. We were talking of net realized losses on these commodities from prior years.

At the rate these figures are carried forward—$1,057,000,000 from 1961.

Mr. FINDLEY. And that was never restored.

Mr. MICHEL. It has never been reimbursed. And then there is $2,211,000,000 unreimbursed from 1967. Also, $2,948,000,000 in 1968. You have a total there of $6,215,000,000 of net realized losses through June 30, 1968. You see, we are a long, long way from really getting caught up.

Mr. FINDLEY. On July 1, 1967, the funds available to the Commodity Credit Corporation exceeded $3 billion. Then a year later, they were tightened down to $1½ billion. Now they are tightened down to a little over a billion dollars.

The whole purpose here, in my opinion, was to try to make the Johnson budgets look better than they really deserved to look, and trying to shift an unfair burden to the first Nixon fiscal year.

Mr. MICHEL. I thank the gentleman for his observation, and it is a very valid one. When the regular bill for fiscal year 1970 appropriations is considered we will develop this point further, for it needs to be aired fully.

Mrs. MAY. Mr. Speaker, American agriculture is currently facing a serious economic crisis. The price and income problems with which U.S. farmers have had to contend in recent years have grown even more acute in the past few months. And, on top of that, adverse weather conditions in many parts of our country have compounded the difficulty, resulting in crop losses and severe hardship to farmers who, even under more "normal" circumstances, have found it increasingly difficult to make ends meet in the face of steadily rising costs and low farm prices.

Many of us are deeply concerned over this situation and its implications for the future of American agriculture and our Nation. It is imperative, Mr. Speaker, that every possible effort be made by this Congress, the administration, U.S. farmers, and the American public to find ways in which this highly damaging trend of falling farm prices and rising costs can be reversed. Our Nation's strength is directly linked to an economically healthy agriculture, and it is most important that we never lose sight of this fact.

Nearly all segments of U.S. agriculture have been hard hit this season for one reason or another. Wheat producers, for example, are faced with price and market problems resulting from a variety of adverse factors. Wheat prices are far below last year's levels, and wheat futures are currently about the lowest of the season. The U.S. Department of Agriculture tells us that the season average price originally estimated at $1.40 per bushel now is expected to be 18 cents less—about $1.22 per bushel.

The wheat export situation presents cause for serious concern at this time, also. Wheat exports are now expected to fall around 190 million bushels below earlier USDA expectations of 790 million bushels. The dock strikes and the recent problem involving shipment of sprout-damaged wheat to Japan have reduced our exports and now the Canadian offers to sell wheat at prices below the International Grains Arrangement have cast an even deeper shadow over the entire U.S. wheat export picture. This latest action has raised a number of questions as to the future of the IGA and the effects to be expected on U.S. exports and domestic prices. A meeting of world wheat exporters has been scheduled for next week here in Washington, D.C., to discuss the problem of price cutting under the IGA, and I sincerely hope for the sake of U.S. wheat producers that the meeting will be a productive one.

With this background, Mr. Speaker, the need for congressional appropriation of additional funds needed by the Commodity Credit Corporation becomes more obvious. We are all only too well aware of the serious fiscal situation which our Nation faces today. With the budgetary belt tightening which has been required, it is necessary to thoroughly examine every further Federal expenditure from the standpoints of need and priority.

Using this yardstick to evaluate the request for additional funds for the Commodity Credit Corporation, it becomes clear that approval of this request could be the only responsible action under the circumstances. Without the needed funds, CCC would shortly cease to operate. This would mean halting the Public Law 480 program, with subsequent loss of export markets and lower domestic market prices. Price support loans could not be made to farmers, causing further market depression. The effects would be widespread and an extremely serious blow to our entire agricultural economy—an economy that has already suffered so much damage this season it would probably not be able to withstand the shock.

In summary, the need for additional Commodity Credit Corporation funds at this time serves to very effectively point up the critical economic situation faced by U.S. agriculture today. I do not believe the seriousness of this situation can be overemphasized, and I would urge all my colleagues in the House to keep this well in mind as the request before us is considered and in the days ahead as we attempt to come to grips with these problems.

Mr. SMITH of Iowa. Mr. Speaker, this resolution for supplemental appropriations to restore over $1 billion in capital for the Commodity Credit Corporation should draw attention to the importance of world trade in agricultural commodities. The amount of commodities exported not only affects our domestic budget by affecting the quantity of basic commodities which the Commodity Credit Corporation acquires in a particular year but it also affects our balance of payments and budgeting problems. A dock strike in the United States practically cut off these exports for several weeks. In addition to that, we have several trade and cargo preference restrictions which limit very considerably the competitive role of U.S. agricultural products.

Congress must bear its share of the blame because politically inspired amendments and gimmicks have been added to all kinds of bills as they go through Congress in an effort to prove that the author of the amendments and certain groups are Communist haters, Arab haters, anti-British, or friends of shipping interests. All of these things working together in the past few months have restricted agricultural exports, given part of our export market to other countries, required an appropriation of additional funds to the Commodity Credit Corporation, put additional pressure on the budget at a time when we have budget problems, will require borrowing money to invest in these commodities which will be stored at a time when competition for money is already too great and interest rates too high, and in the end it will require farmers to cut back on production if they are to keep supply in balance with demand well enough to avoid reduction in prices.

With exports being so important to farmers and at a time when the European Economic Community is considering a tax on our soybean meal and oil imports we certainly need the most vigorous informed and enlightened special trade representative, but this position formerly held by William Roth has not been refilled in this new administration. We need one man speaking for USDA, the State Department, the Commerce Department, and the President instead of letting negotiations get bogged down with each Department working in its own way, and pushing its own separate point of view on world trade matters. Sixty precious days have passed and American agriculture cannot help but suffer from the time that has already been lost since Roth's job was vacated. I strongly urge this new administration to install their replacement for William Roth immediately and I also urge both Congress and the administration to review the various restrictions on trade that in the end cost the American farmer, the American taxpayer and adversely affects our balance of payments. There should be no less than a complete review of all aspects of agricultural trade.

Mr. MAHON. Mr. Speaker, I move the previous question on the joint resolution.

The previous question was ordered.

The joint resolution was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. MAHON. Mr. Speaker, I ask unanimous consent that all Members may extend their remarks in connection with the consideration of the joint resolution.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

PERMISSION FOR SUBCOMMITTEE ON RETIREMENT INSURANCE AND HEALTH BENEFITS, COMMITTEE ON POST OFFICE AND CIVIL SERVICE, TO MEET AT 2:30 P.M. TODAY

Mr. DANIELS of New Jersey. Mr. Speaker, I ask unanimous consent that the Subcommittee on Retirement Insurance and Health Benefits of the Post Office and Civil Service Committee may be permitted to meet at 2:30 this afternoon.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

ABM SAFEGUARD SYSTEM

(Mr. CELLER asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. CELLER. Mr. Speaker, the issue of the deployment of a limited ABM system has resulted in a flood of words, pro and con. In discussing the deployment of the ABM Safeguard system, as I view it, the question is not "What if the opponents are right," but rather "what if they are wrong?" If the opponents are right, we have spent $800 million; but if they are wrong, we, in our turn, have wronged untold millions of lives. Certainly, there are unprovable assumptions on both sides; estimates that cancel out each other, demonstrable facts upholding each end of the argument. But, the disparity in possible consequences leads me inexorably to conclude in favor of the Safeguard system, the modified anti-ballistic-missile program. The gamble is too great, the awesome risk too much to bear.

I have reached this conclusion painfully, fully aware that there is a respectable body of opinion against the deployment, in any form, of the ABM. There are those who believe earnestly that it will accelerate the arms race, inhibit disarmament talks, that we already have sufficient deterrent power to absorb an attack and still effectively retaliate, that our Poseidon force eliminates the need for the Safeguard system. But such arguments, I believe, must fall before the estimate that by the mid-seventies the Soviet Union could have a "first strike" capability. Nor do we assume that if she has, she will use it. What underlines my thinking is we just do not know now any more than we knew then that a "Pearl Harbor" could happen.

What the Safeguard system spells out is a double lock on a door. In that sense, it is a guard against a tempted aggressor, be it the Soviet Union or Red China. The ABM is not a weapon of offense. It does not thrust outward, but stands mute witness to one of the paramount interests of government to protect the lives of its people. With the knowledge that the Soviet Union is perfecting highly sophisticated undersea detective devices, total reliance on the Polaris and Poseidon force will not do.

Moreover, the project of the ABM system has not halted the willingness of the Soviet Union to enter more fully into disarmament talks.

The decision to limit the ABM to selective missile sites is an additional signal to the Soviet Union that we seek and welcome disarmament agreements. It is a precaution we take so limited in scope that I, for one, cannot view it as provocative or as indicative of an arms escalation.

Nor do I view the cost of the Safeguard system as cutting into our determination to meet our domestic needs. We can do both. Our gross national product is approaching $300,000,000,000, and we need not embrace the counsel of despair. We have the resources to heal the ravages of want and poverty if we have the national will to do so. It is up to the administration to accent this national will by stating publicly now that the savings secured by moving from a Sentinel system to the Safeguard system—from 1.8 billion to 800 million—will be allocated to wage battle against the domestic ills that beset us.

Those who oppose the ABM system, I repeat, could be right, but what—dreadful to contemplate—if they are wrong? And because I cannot know and am no prophet, I support and will vote for the ABM.

PUBLIC WORKS MORATORIUM WOULD PENALIZE FUTURE GENERATIONS

(Mr. JONES of Alabama asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. JONES of Alabama. Mr. Speaker, I could hardly believe my eyes this morning when I read that the administration is seriously considering a moratorium on public works.

This startling and tragic disclosure was made by Budget Director Robert P. Mayo in testimony on the proposal to increase the debt limit. His aim in this drastic move would be an attempt to reduce inflationary pressures.

It is highly questionable that such a remedy will improve the situation, much less effect a recovery.

Coming at a time when our Nation's proportional investment in public works endeavors is every year diminishing, it is doubly confounding that such a policy would even be considered.

Aside from the adverse effect on the employment and the economy of every State in this Union, we must think of our obligation to those who come after us.

A moratorium on public works will prove to be costly to the American people in terms of the delay in benefits which accrue from these endeavors. A moratorium will prove disastrous for future generations which would be saddled with the task of trying to make repairs, if such repairs are even possible, for the mistakes and problems which we pass on by our failure to plan and act for undeniable future needs.

Our Nation's unexcelled levels of prosperity and accomplishment were not the products of an adding machine approach to problems. The greatness of America is the result of people who dared to dream boldly and to forthrightly plan and execute private and public endeavors which fostered industry, trade, and commerce.

In recent years we have not maintained a level of public investment in facilities which are the very keystone to growth and development for the people of this Nation.

This is evidenced by the pollution of many of our streams, the traffic congestion resulting in delays for travelers and goods, the overcrowding of hospitals and health facilities, the crisis in education, the bogging down of the mails, the floods which recently damaged California and which now threaten vast areas across the northern and western sections of our land, the dearth of recreational areas, and the many, many other costly and frustrating problems we see at every turn.

We have a backlog of public works needs now.

We can easily read the charts about the increases in population which are expected in the years ahead. This compounds our immediate problem and makes the need for planning and action all the more urgent.

Any moratorium adds to the problems we pass to future generations. The need is for greater investment in public works. Our failure to adequately service these needs is a selfish expedient which penalizes unborn generations. We can do better. We must.

MORATORIUM ON PUBLIC WORKS

(Mr. EDMONDSON asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. EDMONDSON. Mr. Speaker, this morning's Washington Post carries the news that Budget Director Robert F. Mayo, testifying before the Senate Finance Committee, stated that very serious consideration was being given to a total moratorium on public works.

To me this is one of the most alarming reports I have heard since the new administration took over. I hope that the Budget Director was merely speaking for himself and not for the administration, because it seems to me that we have some public works programs underway in this country that so vitally affect the well-being of the entire Nation that it would be disastrous to reembark upon a no-new-starts policy.

Mr. GERALD R. FORD. Mr. Speaker, will the gentleman yield?

Mr. EDMONDSON. I am glad to yield to our distinguished minority leader.

Mr. GERALD R. FORD. I read the same news story the gentleman from Oklahoma read this morning. This morning I was privileged to be at a meeting where the Director of the Bureau of the Budget was present. I asked him a question whether or not this would be the Bureau of the Budget recommendation, and the categorical answer was given: There will be no freeze on new starts. There will be high selectivity. Those projects that have a good benefit-to-cost ratio will qualify for initiation, as will also those projects where there is an emergency situation, such as we might be facing up in the North or the Northwest, with heavy rains, snow, et cetera; and there will undoubtedly be favorable consideration given—unquestionably, I should say—where those projects are underway where it would be uneconomical and unwise for the project to be stopped when it is halfway through. So I can only say to the gentleman that there is no truth to the statement that the administration is going to put an arbitrary freeze on such projects, as was indicated perhaps by the headlines this morning.

Mr. HAYS. Mr. Speaker, will the gentleman yield?

Mr. GERALD R. FORD. I yield to the gentleman from Ohio.

Mr. HAYS. I hope we can rely on the statement the minority leader has made as being fairly to the point, because I recall last week he gave a statement to the press about the Democrats not having done anything about stopping the riots in our colleges and had not used the laws that were available to them. Then the next day the White House said, Well, the reason they had not used them was that no college had asked them to, and you cannot do it unless you ask them. So the gentleman sort of marched up the hill and got sort of pushed down. I hope in marching up the hill today he won't get pushed back down again.

Mr. GERALD R. FORD. Mr. Speaker, will the gentleman yield?

Mr. EDMONDSON. I am glad to yield to the minority leader.

Mr. GERALD R. FORD. The statement made by the White House was at least an affirmative statement to the effect that college presidents and university presidents ought to use the power which the Congress gave them to withhold the funds from those students who violate the law or other regulation. This was at least a White House backing up of any action that might be taken by authorities on the campuses where there is a violation of their rules and regulations. We never had that before under the previous administration.

Mr. HAYS. Mr. Speaker, will the gentleman yield further?

Mr. EDMONDSON. I yield to the gentleman from Ohio.

Mr. HAYS. That is about the best "Alice in Wonderland" explanation that I have heard. Everybody who read that newspaper knows that the White House has been throwing this football back and forth. If you want to call what the President has stated an affirmative action, that is all right with me, but it is clear that it is the sort of statement designed to get him off the hook.

Mr. EDMONDSON. I hope that the selectivity on starts to which the minority leader referred will be a selectivity that recognizes the quality of a project, and the urgency of need for it, regardless of the congressional district involved.

TAX REFORM OVERDUE—TOTAL ABOLITION OF THE OIL DEPLETION ALLOWANCE

(Mr. PODELL asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. PODELL. Mr. Speaker, there has been an enormous amount of verbiage in recent weeks over tax reform. We hear sound. We observe fury. Great noises are heard. Huge clouds of verbal dust arise to the heavens. When all is said and done, we stand still in the same place. A time has come for plain talk.

Our tax system makes a slice of Swiss cheese look like solid concrete. It has ceased to be an equitable system of taxation. Further, a growing number of Americans are acutely aware of what is wrong and what must be done to rectify the situation. Many of these observant people reside in the 13th District of New York, and I have been hearing from them daily. They know all about millionaires and near-millionaires who pay no taxes whatsoever. They are aware of all the loopholes. From foundations, conglomerates and tax loss farming to capital gains, gifts and charitable deductions. From municipal industrial development bonds to real estate depreciation deductions. Yet none of these loopholes elicits more intelligent indignation than the 27½-percent oil depletion allowance.

Recent reports indicate that no significant attempt at closing this loophole is contemplated by the administration this year. Substantial tax relief for lower- and middle-income taxpayers is to be delayed, while the depletion loophole gushes streams of wealth for a few at the expense of the many. Yet it seems that the oil barons are untouchable. Why is this so? Why is their preserve sacred? Why should the oil barons be treated favorably at the expense of the entire Nation?

Why should scores of millions pay for the free ride they are taking? Particularly in light of their recent activities in areas of price hikes and pollution? Why, indeed?

Oil companies charge themselves higher prices for crude oil they control and produce. They then proceed to take a higher depletion allowance and raise gas and oil prices to every American citizen. Consumers are skinned from the ankles up and from the neck down.

The Congress of the United States gave the oil depletion allowance to the oil barons. What Congress gave, Congress may take back. This is exactly what it should do and can do—if it wishes. These oil barons constitute a fourth level of government, polluting our environment, maintaining artificially high prices, preventing cheaper oil from entering the Nation and generally doing everything with the Treasury but placing it on wheels and taking it away to their board rooms. I believe we can and should act to abolish the oil depletion allowance—all of it, totally, irrevocably, swiftly.

TEXAS RUBY RED GRAPEFRUIT

(Mr. DE LA GARZA asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. DE LA GARZA. Mr. Speaker, at the risk of sounding as though I am bragging, I must admit that the Lower Rio Grande Valley of Texas grows the finest grapefruit in the country. And without any fear of successful contradiction, I point out, Mr. Speaker, that the valley's Ruby Red grapefruit are without peer in the world.

So that everyone will know whereof I speak, I have arranged that these grapefruit be served all who eat lunch tomorrow in the House Restaurant in the Capitol. The grapefruit is being served through the courtesy of the Texas delegation in the Congress with the compliments of the TexaSweet Advisory Committee, Inc., of Pharr, Tex. This is the committee handling advertising under the citrus marketing order and represents all the citrus growers in the valley.

Mr. Speaker, I would like to conclude with a poem and "A Magic Menu" I sent the Members advising about tomorrow's treat:

TEXAS RUBY RED GRAPEFRUIT

On March 26 when your lunch you eat
The House Restaurants will serve a treat
Of grapefruit from Texas' Rio Grande Valley—
Around its zesty flavor rally.

The grapefruit diet's one sure slimmer,
It makes you trim, then a little trimmer,
So take note, joggers, calory misers—
It's Ruby Reds for appetizers.

This fruit, the finest in the nation,
Comes through the Texas delegation
From TexaSweet Citrus Advertising
Who knows you'll find it appetizing.

So gather around with a right good will
For a Texas treat without a bill!

TEXASWEET CITRUS ADVERTISING, INC.,
MAGIC MENU

I. Breakfast: ½ TexaSweet grapefruit or unsweetened grapefruit juice, 2 eggs, any style, 2 slices bacon, minimum (you may eat 12 eggs and 12 slices of bacon if you want to). Coffee or tea, no cream or sugar.

II. Lunch: ½ TexaSweet grapefruit, Meat, any style, any amount, Salad, as much as you can eat with any dressing that contains no sugar. Coffee or tea.

III. Dinner: ½ TexaSweet grapefruit, Meat, any style, any amount, with gravy provided it is not thickened with flour. Of course, you may substitute fish for meat. Any green, yellow or red vegetables; as much as you can eat, and salad above.

IV. Bedtime snack: Tomato juice or skimmed milk.

1. At each meal you must eat until you are full, until you cannot possibly eat more.

2. Don't eliminate anything; for example, don't skip bacon at breakfast or omit the salad at dinner. It is this combination of foods that burns up accumulated fat.

3. The TexaSweet grapefruit is important because it acts as a catalyst that starts the fat burning process.

4. Cut down on coffee. It is thought to affect the insulin balance that hinders the burning process. Try to limit yourself to one cup at each meal.

5. No eating between meals! If you can eat the combination of foods suggested until you are stuffed you won't be hungry between meals.

6. Note that this list completely eliminates sugars and starches which form lipoids and lipoids are what form fat. Fat does not form fat; it helps burn it up. You can fry your eggs in butter and use butter generously on your vegetables.

7. Note that with this "magic menu" you can eat what your family eats with the exception of desserts, breads, and white vegetables. While your family eats these, you may have a double or triple helping of meat, salad, or vegetables. Eat until you are stuffed and then force yourself to eat some more . . . the more you can eat of the proper combination the more you lose.

8. You can lose 10 pounds in 10 days. There will be no weight loss the first four days, but you will suddenly drop 5 pounds on the 5th day. Thereafter, you lose 1 pound a day until the 10th day. Then you will lose 1½ pounds every 2 days until you get down to the proper weight.

9. Check with your family doctor.

THE MIAMI TEENAGE RALLY FOR DECENCY

(Mr. PEPPER asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. PEPPER. Mr. Speaker, on Sunday afternoon in Miami my wife and I attended an event which I think is of national, if not worldwide, significance. There, 30,000 teenagers gathered in our Orange Bowl to proclaim to the country and to the world their belief in God and in their country and their support of the cause of decency in this country.

This is the program which they announced on that occasion; the Miami Teenage Rally for Decency.

This is what we stand for:

1. Belief in God and that He loves us.

2. Love of our planet and country—Patriotism.

3. Love of family.

4. Reverence for one's sexuality.

5. Equality of all men.

It was an inspiration to have been privileged to be present and observe this great thoroughly peaceful but exciting outpouring of our young people. I hope this gigantic rally of youth will be followed throughout the country, and I hope, the world, to restore the faith of people everywhere that the youth of this generation is basically wholesome and sound and truly dedicated to the love of God, love of country and the principles of human rights and decency.

The greatest credit should go to a fine young man who is a senior at Miami Springs High School and lives at Hialeah in my district, Mike Levesque, 17 years old, for being the one to conceive and principally to organize this momentous rally. Another having much to do with the success of the rally was Father Sullivan, a dynamic young Irish priest. Others who had a great part were Father Briggs, Rabbi Lehrman, Bishop Duncan and many other spiritual leaders of the Greater Miami area who gave most meaningful support to the movement. Jackie Gleason, Anita Bryant and Ted Mack and many name bands and entertainers thrilled the thousands of eager young people present with their participation.

Mr. Speaker, I include the following newspaper articles which tell of the rally.

[From the New York Times, Mar. 24, 1969]

TEEN-AGE DECENCY RALLY DRAWS 30,000 IN MIAMI

MIAMI, March 23.—Some 30,000 hand-clapping persons, some waving signs saying "Down With Obscenity," rallied in the Orange Bowl today to support a teen-age crusade for decency in entertainment.

Teen-agers organized the rally after Jim Morrison, 24 years old, the lead singer of The Doors, a rock group, was charged with indecent exposure during a concert in Miami on March 1. Six warrants have been issued for Mr. Morrison's arrest.

Mike Levesque, 17, the originator of the rally, a senior at Miami Springs High School, said the idea had grown out of a Roman Catholic youth group discussion two days after the concert by The Doors.

"This is not a protest rally," said Julie James, 18, a member of the teen-age Rally for Decency. "We're not against something. We're for something."

TALKS ON GOD AND SEX

Teen-age speakers gave three-minute talks on God, parents, patriotism, sexuality and brotherhood. There were appearances by professional entertainers, who donated their time.

"Five virtues," selected as the keynote of the rally, were "belief in God and that He loves us; love of our planet and country; love of our family; reverence of one's sexuality, and equality of all men."

"Sex is definitely being exploited and it is because society has been losing its reverence for one's sexuality," Miss James said.

The shirt-sleeved crowd basking in a warm sun cheered for Jackie Gleason, Anita Bryant and The Lettermen, popular music singers, who appeared in order to applaud the teenage rally.

"I believe this kind of movement will snowball across the United States and perhaps around the world," Mr. Gleason said.

"I think it's great, there should be more things like that," said Tony Butala of The Lettermen.

Young Levesque said he was thrilled by the rapid growth of the decency movement and the support it had gained from adults.

The crowd was about evenly split between teen-agers and adults.

Another member of the executive committee, Alan Rosenthal, 16, said telephone calls and letters had come in from around the country from teenage groups interested in the movement.

He said: "We're going to try to come up with some kind of international youth or-

ganization. It could really tie the world together.

"The youths start out with something like this, and 10 years from now when they get a little older, who knows what could happen."

Numerous organizations, including major religious denominations, contributed to the rally. Members of the American Legion passed out 10,000 small American flags.

[From the Washington Post, Mar. 24, 1969]

ABOUT 30,000 RALLY FOR DECENCY

(By John Van Gieson)

MIAMI, March 23.—About 30,000 handclapping people, some waving signs saying "Down With Obscenity," rallied in the Orange Bowl today to support a teenagers' crusade for decency in entertainment.

Teen-agers organized the rally after Jim Morrison, lead singer of The Doors, was charged with indecent exposure during a Miami concert on March 1. Six warrants have been issued for Morrison's arrest.

"This is not a protest rally," said Julie James, 18, a member of the Rally for Decency executive committee. "We're not against something. We're for something."

Teen-age speakers gave three-minute talks on God, parents, patriotism, sexuality and brotherhood, sandwiched between appearances by professional entertainers who donated their services.

"Five virtues" selected as the keynote of the rally were: "Belief in God and that He loves us; love of our planet and country; love of our family; reverence of one's sexuality, and equality of all men."

The shirt-sleeved crowd basking in a warm sun cheered for entertainers such as Jackie Gleason, Anita Bryant and The Lettermen, who appeared in order to applaud the teens' rally.

"I believe this kind of movement will snowball across the United States and perhaps around the world," Gleason said.

"I think it's great; there should be more things like that," said Tony Butala of The Lettermen.

The originator of the rally, Mike Levesque, 17, a senior at Miami Springs High School, said the idea grew out of a Catholic youth group discussion two days after the controversial Doors concert.

[From the Washington (D.C.) Evening Star, Mar. 24, 1969]

SOME 30,000 LAUNCH TEEN-AGER CRUSADE FOR DECENCY

MIAMI.—Some 30,000 handclapping people, some waving signs saying "Down With Obscenity," rallied in the Orange Bowl yesterday to support a teen-agers' cruade for decency in entertainment.

Teen-agers organized the rally after Jim Morrison, lead singer of The Doors, was charged with indecent exposure during a Miami concert on March 1. Six warrants have been issued for Morrison's arrest.

"This is not a protest rally," said Julie James, 18, a member of the teen-age Rally for Decency executive committee. "We're not against something. We're for something."

Teen-age speakers gave three-minute talks on God, parents, patriotism, sexuality and brotherhood, sandwiched between appearances by professional entertainers who donated their services.

"Five virtues" selected as the keynote of the rally were: "belief in God and that He loves us; love of our planet and country; love of our family; reverence of one's sexuality, and equality of all men."

"Sex is definitely being exploited and it is because society has been losing its reverence for one's sexuality," Miss James said.

The shirt-sleeved crowd basking in a warm sun cheered for entertainers such as Jackie Gleason, Anita Bryant and The Lettermen who appeared in order to applaud the teens' rally.

The originator of the rally, Mike Levesque, 17, a senior at Miami Springs High School, said the idea grew out of a Catholic youth group discussion two days after the controversial Doors concert.

The crowd was about evenly split between teen-agers and adults.

Another member of the executive committee, Alan Rosenthal, 16, said telephone calls and letters poured in from around the country from teen-age groups interested in the movement.

DECENCY RALLY RATTLES ORANGE BOWL TO RAFTERS

(By Jean Wardlow)

Roaring "rock" and cheering teenagers shook Miami's Orange Bowl stadium to its cantilevered roof and rattled it down to its locker room doors Sunday as a crowd of 30,000 "stood up to be counted" at the Miami Teenage Rally for Decency.

"I want to tell you," said The Great One, Jackie Gleason, to the cheering teens rallying for "decency" in all areas of life, "that up to now I've told people I'm happy to be a Floridian.

"But now, after what you kids are doing, I want to say I'm proud to be a Floridian."

Most of the crowd, which began arriving about 1 p.m. for the pre-show was teens. They came in groups or on their own, some displaying hand-lettered signs, "Down With Obscenity," "Mater Center Backs You" and "St. John Bosco Youth Movement Supports You."

There were kids in jeans, kids in sneakers. Kids in minis and Sunday best. Kids in sports shirts and flare pants and kids in tie and jacket. Negro kids, white kids, a few with beards, a few with beads; short kids, tall kids—all clapping in time to the music of some top stars whom they'd seen on TV, heard on records and who were appearing at their rally for free because they believed "in our cause."

Sleepy-eyed Ronnie Smith of The Lettermen was clutching his breakfast-lunch—part of a hot dog and a coke—because the pop singing group had driven all night without sleep after a Saturday night concert in Jacksonville to take part here.

"We wanted to take part to bring back the good will entertainment groups should have and which was lost to some extent by what happened (with The Doors' performance here)," Smith said. Jewish groups, civic and community leaders from all faiths and political areas of Dade.

"It won't stop here," one of the rally's teens said. "This shows we are in the majority. The kids are with us."

(It is estimated that the countywide total of Dade's teenagers is 70,000.)

Father Briggs said the rally "will probably evolve into a countywide group. Gleason, who had been driven in in a 1911 touring car (all celebrities arrived by these special cars) had said, "I believe this kind of movement will snowball across the United States and perhaps even around the world."

Miami Dolphin football star Bob Griese, standing on the sidelines after his appearance, said, looking out at the cheering stadium, "You hear so much on TV programs about the bad teenagers. They're not in the majority at all, and this shows what the fine teenagers are really like, I think it's been a privilege to take part in this."

From the time the youngsters first entered the stadium, the boom of electrified sound shook their eardrums. At first, sitting in seats higher up, many later moved down to sit on the wall in front of box seats to be closer to the action—performers playing from the huge stage at the east end of the field.

The youngsters clapped, waved small U.S. flags given out by the American Legion, or kicked their heels in time to the music.

It was an enthusiastic crowd—"we've had to give out a couple of dozen aspirin—too much excitement," said a nurse at one of the stadium's four emergency nursing stations. But it was an orderly crowd throughout the long program.

At first scheduled for two hours—two and a half with the pre-show—it went to nearly four hours long, with more crowd remaining at the end than at major football games in the stadium.

"This is great. Just great," said a happy Mike Levesque, one of the originators of the rally and who, one friend said, "is so tired he can hardly stand up by now. He says it will be relaxing to just go back to school now."

Mike was presented with a special book from the Freedoms Foundation at Valley Forge during the program. Singer Anita Bryant made the presentation.

The singer, obviously moved by the event, told the audience, "I had a speech prepared, but now that I see the reaction of what can happen when our young people stand up for what they believe in God and our country, it makes me at a loss for words."

Ted Mack told them, "These young people are out to show the world it isn't about to fall apart."

From the first electrified twang of The Shufflin' Kind, the CYO groups and The Rainbeaux in the pre-show, the crowd was "with" the entertainers, and the five teenage speakers who alternated between acts of the regular rally program.

And the acts showed the kids can be modern without being square or obscene.

First, to wild cheers, came the red-jacketed The Letterman ("Up, Up and Away") and then, to more wild cheers, The Village Stompers in modern Dixieland fashion whose "Washington Square" was a top hit.

There were the lavender mini-ed and rose-colored Edward-jacketed The Faculty, which brought cheering like somebody had just made a touchdown, and The Rhodes Brothers—"the Rhodes," the kids called them—whose nationwide recording of "Never My Love" was a best seller, had a whole stadium singing along ("don't be bashful, chillun, 'cause that's not where it's at.").

The acts were hip, hep and high-powered. "It's to show what we like is modern, but modern doesn't have to be obscene," said a rally teen.

By the time the big-act Impact of Brass and Sing Out America had finished their "thing" the teens had surrounded them with requests for autographs and had enough musical memories to fill a recorded scrapbook.

In between, the basic ideals of what the rally stood for on topics of God, patriotism, family, sex, and equality of man, were expressed by Joe Burke, Columbus High; Alan Rosenthal, Miami High; Pat Idlette, Miami High; Juliet James, Westminster Christian; and Mike Levesque.

"The power of Love is found in all people and makes us all brothers," said Joe Burke. "It's up to us to use our power of democracy," said Alan Rosenthal. "We do not seek to overcome; we seek to unify."

"Sex is being exploited," said Julie James. "We can be both modern and modest. Sex is not a plaything," she said. "It is not giving up the body without giving up a commitment of the total self."

And Mike said that each man "must realize for himself that he cannot just sit back and let the world go by him. He must be a part of the world."

And as the last amplified guitar string faded out over the goalpost, the Rev. Ted Place—the offstage emcee and executive director of the Greater Miami Youth for Christ—lauded the teens "who had the courage and concern to stand here and be counted."

"SHOULD DO THIS EVERY 6 MONTHS"

(By Larry Mahoney)

Plain old-fashioned Americanism, tinged with a touch of rock, reigned in the Orange

Bowl on a euphoric Sunday afternoon dedicated to decency.

This is the way it was:

Legionnaires, whose own wars ended long ago, pass out 20,000 pocket-sized versions of the Stars and Stripes. The Rhodes Brothers give booming renditions of "The Green Berets" and "The Battle Hymn of the Republic." The Freedoms Foundation of Valley Forge presents an award for "moral courage."

Jackie Gleason in an antique 1911 White touring car. Anita Bryant in a 1931 Model T. Ted Mack quoting Patrick Henry. Congressman Claude Pepper, newest member of the old House Un-American Activities Committee, standing at attention for The Star Spangled Banner, a Legion flag over his heart. Near him is Father Sean O'Sullivan, the young priest from County Cork who inspired the rally.

Mayor Chuck Hall, a flag in his breast pocket, likes the scene. "I think we should do it every six months," his honor said. "This is magnificent; isn't it?"

Watching the crowd are 60 off-duty Miami policemen, double the number who staffed the famous exhibition of The Doors at Dinner Key March 1. After the rally was done, Sgt. Ronnie Reeder goes before national network TV cameras to say: "This is the best Orange Bowl crowd I've ever seen; absolutely no hoodlums around. We weren't needed. The officers have decided to donate their day's pay to the rally." That comes to about $20 from each patrolman, $25 for the sergeants.

A sign: "Stay Clean—Swim! the Coral Park High Swim Team."

A Salvation Army banner flutters in the breeze on the other side of the stadium. Some 200 children, largely subteens, are recruited from the stands to march afield with The Miami Herald's giant American flags.

Moral rearmament is represented by Miami's "Up With People" singers, who sang all the old ones such as "Which Way America?" and "The Nicest People I Know Are People."

Hank Meyer, the publicist, beams as Jackie Gleason puts in a plug for Florida before the national TV cameras. Anita Bryant draws an ovation when she mentions her twins: "And they're heavyweights, by the way . . . six pounds, 10½ ounces, and six pounds, three ounces."

Mrs. Annie King James—"just say I'm past 80"—is wearing a feathered hat and a hand-knit sweater with the U.S. flag on one side and "G.O.P." on the other. She was carried into the stadium aboard her special chair.

"Wouldn't have missed it," she said. "I'm interested in better government and what these kids are doing."

Outside, a few pickets parade with signs bearing messages like this: "Jesus Is Coming. This Is The Last Generation." Ken Russell, 17, of Fort Lauderdale, explains: "We're a group of former hippies and drug addicts who're going all the way for Christ." Ken's hair is still long enough to draw unfriendly looks from a squad of policemen.

Inside, Father O'Sullivan, the cherubic Irish priest, is smiling. "The teenagers," he said, "now realize that solidarity is their strength. They will strike when the iron is hot . . ."

Mr. WAGGONNER. Mr. Speaker, will the gentleman yield?

Mr. PEPPER. I yield to the gentleman from Louisiana.

Mr. WAGGONNER. Mr. Speaker, I thank the gentleman for bringing this meeting in Miami to the attention of the House. I concur with the approach of these youngsters to this matter of demonstrating their faith in God and respect for the law as they have expressed it.

It is unfortunate indeed that the headlines and the TV film always seem to go to the relatively small clique bent on destroying our country. It is a pleasure, for once, to see these young men and women making headlines. More attention should be given to them and I am glad my colleague from Florida has brought this material to our attention.

WELCOME TO NATIONAL ASSOCIATION OF BROADCASTERS

(Mr. PICKLE asked and was given permission to address the House for 1 minute, to revise and extend his remarks, and to include extraneous matter.)

Mr. PICKLE. Mr. Speaker, the National Association of Broadcasters are in town again. We welcome them, for they are a great group of editors, advertisers, salesmen, programers, and newscasters. As a former broadcaster myself, I think I know something about their dedication to the public service, and their pursuit of the American dollar, both admirable aims.

We are all agreed, I take it, that freedom of speech should be zealously protected. Every Member of this body is equally dedicated to that most fundamental right given to us in the first amendment.

But freedom of speech does not give the network broadcasters immunity from all kinds of broadcasting, whether that be newscasts, programing, or even advertising. The network broadcaster has a public duty to be fair and accurate, to be objective, and to present a balanced program in the public interest.

Freedom of speech does not mean that broadcasters are above the law or that they cannot be touched by any rule or regulation in the public interest.

There is considerable discussion going on these days about the matter of violence on television and radio, about prescreening of programs, and whether some rules and regulations over networks should be passed by the Congress. I do not subscribe to the prescreening or preprograming or censorship of programs or news, although at times we do wonder if complete freedom is always responsibly performed.

If the prescreening is done voluntarily by the industry's association, perhaps that is well and good. I am willing to let the facts of the program stand on their own merits.

Yet we should remember that our Government grants these public licenses to individual stations and the Government has the right to be sure that programs and newscasts and advertisements of networks are fair and balanced and objective. The networks are now the sole judge and jury—outside of public reaction—of their own newscast; or of programs, which they generally own as their private property. They do not have to obtain a license, and they are under no direct rule or regulation. While it must be proudly admitted that they perform a marvelous service, still we should caution the networks that they too could be required to operate within rules prescribed by their government.

Let us all join in and wave the flag of free speech, but while we are at it, let us remind the networks that someone in our free government has the right to determine if networks abide by reasonable rules, even as their affiliate stations are held accountable to the fairness doctrine.

TIME IS RUNNING OUT IN MICRONESIA

(Mr. ZABLOCKI asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ZABLOCKI. Mr. Speaker, in these times our Nation is so beset by controversy—the Vietnam war, the ABM debate, the Middle East crisis—that crises-in-the-making do not get the attention they deserve.

Today I wish to pinpoint one problem area which tomorrow may flare to emergency proportions. It is the status of the U.S. Trust Territories of the Pacific, more commonly known as Micronesia.

Mr. Speaker, time is running out for the United States in Micronesia.

How many Americans realize that the Congress of Micronesia has passed a resolution and sent it to the United Nations condemning U.S. stewardship in the islands and asking that the international body reconsider its legal and political status?

How many Americans know that the Marianas Islands District Legislature has called on the Soviet Union to aid the people of the Trust Territories?

How many Americans are concerned over a resolution that has been introduced into the Congress of Micronesia asking the Soviet Union to present its form of government to the people of the region, since the form they know—American democracy—has semed to fail them?

Certainly, all these resolutions were intended to shock the United States into taking definite action on the status of the Pacific islands, as our Nation promised when we took over their administration after World War II.

But just as surely, in the absence of U.S. action, the people of this strategically vital area will grow more disillusioned with the United States and our system.

We have seen the problems which the actions of Anguilla have caused the United Kingdom.

Yet the very same difficulties may be in store for our Nation unless speedy action is taken to fulfill the pledges we have made to the people of Micronesia.

Last Congress I introduced a bill to establish a Commission To Study the Future of the Trust Territories. Today events appear to have outrun that kind of solution.

Very soon our Government must make a concrete proposal for allowing the people of Micronesia to exercise a right sacred to Americans—the right of self-determination.

We have educated these people. We have helped to give them a sense of identity as Micronesians. We have aided them in establishing democratic institutions patterned after our own.

Now the people of that area are demanding to be heard. They wish to be released from the political limbo in which

they now find themselves. If given a choice, I have no doubt that the great majority of Micronesians will choose close association with the United States.

The people of the Marianas—who now ask for Soviet aid—again and again have petitioned for American citizenship.

But will they still wish such association on some distant—or not-so-distant—tomorrow? Because of the great importance of these islands to America's strategic position in the Pacific, it is a question of great moment.

Action is required now, Mr. Speaker. I urge the Administration to heal this breach between the Micronesian and American peoples now by taking the necessary steps to find a political accommodation acceptable to both parties.

Mr. Speaker, in order to further acquaint my colleagues with the situation, I am including at this point in the RECORD the text of the resolution passed by the Congress of Micronesia asking the United Nations to reconsider Micronesia's political and legal status. Also included is an article from the Honolulu Advertiser of March 12 on the call for Russian help by the Marianas District Legislature and an article from the March 10 Honolulu Star-Bulletin on other recent developments in the Trust Territories.

The resolution and articles follow:

S. RES. 18

A Senate resolution requesting the United Nations to reconsider the legal and political status of the Trust Territory of the Pacific Islands

Whereas, on April 2, 1947, the United Nations Security Council by unanimous vote, and on July 18, 1947, the United States Senate did approve a Trusteeship Agreement between the United States and the United Nations regarding the administration of the islands, exclusive of Guam, known collectively as Micronesia; and

Whereas, by the acceptance of this Agreement, the United States bound itself to act in accordance with the letter and spirit of the United Nations Charter, the International Trusteeship System, and the Trusteeship Agreement itself; and

Whereas, the said Charter, System, and Agreement demanded of the United States, and of all other signees, certain obligations, which the United States did freely and of its own accord, take upon itself in regard to the islands of Micronesia, hereinafter referred to as the Trust Territory; and

Whereas, under the Trusteeship Agreement the United States undertook to "foster the development of such political institutions as are suited to the trust territory" and to "promote the development of the inhabitants of the trust territory toward self-government or independence," according to the "freely expressed wishes of the people concerned," and, to these ends, to give the inhabitants a progressively increasing share in the administrative services of the Trust Territory, to develop their participation in government, and to give due recognition to the customs of the inhabitants; and

Whereas, under the said Agreement, the United States undertook to "promote the economic advancement and self-sufficiency of the inhabitants," and, to this end, to regulate the use of natural resources, to encourage the development of fisheries, agriculture, and industry, to improve transportation and communication facilities, and to protect the inhabitants against the loss of their lands and resources; and

Whereas, under the said Agreement, the United States undertook to "promote the social advancement of the inhabitants," and to this end, to protect the rights and fundamental freedoms of the inhabitants without discrimination, to protect the health of the inhabitants, to control the traffic in arms and ammunition, dangerous drugs, and alcoholic beverages, and to protect the inhabitants against other social abuses; and

Whereas, under the said Agreement, the United States undertook to "promote the educational advancement of the inhabitants," and, to this end, to establish a general system of elementary education, to facilitate the vocational and cultural advancement of the population; and to encourage qualified students to pursue higher education, including professional education; and

Whereas, the International Trusteeship System (Article 73 of the United Nations Charter) requires the United States to "promote to the utmost" the well-being of the inhabitants; and

Whereas, the Trusteeship System (Article 76a of the Charter) requires the administration of the Trust Territory in such a way as to further international peace and security; and

Whereas, the Trusteeship System (Article 76c) requires administration in such a way as to "encourage respect for human rights and for fundamental freedoms for all without distinction as to race, sex, language, or religion, and to encourage recognition of the inter-dependence of the peoples of the world; and

Whereas, the Trusteeship System (Article 76d) requires the administering authority (the United States, in this case) to "ensure equal treatment in social, economic, and commercial matters for all Members of the United Nations and their nationals;" and

Whereas, the United States has attempted to transplant in the Trust Territory a system of government far too closely resembling its own to be relevant to the actual political conditions of Micronesia; and

Whereas, the United States, in considering political alternatives for the Trust Territory, has consistently refused to discuss seriously the possibilities of independence or alliance with a country other than the United States, apparently taking for granted a continued association with itself, whether the Micronesian peoples desire this or not; and

Whereas, the United States has, for over twenty years, deferred any program of political education for the inhabitants; and

Whereas, the number of Micronesians in policy-making positions in the administration is, after twenty-one years, distressingly small; and

Whereas, regardless of the "practical necessity" of such action, so many Congress of Micronesia bills are vetoed annually as to constitute a major thwarting of the will of the inhabitants, bringing to naught their already limited participation in government; and

Whereas, the Micronesian people have no voice in the selection of members of the judiciary branch, of the High Commissioner or even of district administrators; and

Whereas, the district and territorial administrative systems impose upon the Micronesian peoples a system of government totally alien to their respective cultures; and

Whereas, to date there has been no significant development of either fisheries or industries in the Trust Territory; and

Whereas, the people of Kwajalein were forced to surrender on ninety-nine year lease approximately seven hundred fifty acres of land in return for seven hundred fifty thousand dollars, or about ten dollar per acre per year in an area where land is scarce and therefore precious beyond the comprehension of outsiders; and

Whereas, the islands of Roi-Namur in Kwajalein Atoll were expropriated without compensation; and

Whereas, the people of Eniwetok and Bikini, surrendered their land for a nominal cash fee plus a larger amount held in trust, from which the people in question are permitted to receive only the interest of a few dollars per person per year; and

Whereas, this trust fund was granted with the provision that it could be invested only in United States Government securities, meaning that, with inflation, the United States Government got the use of Eniwetok and Bikini for almost no cost to itself, and at the cost of great hardship and suffering to the former residents of those atolls; and

Whereas, the atolls of Eniwetok and Bikini were used for the detonation of several series of nuclear and thermonuclear test explosions, all with disastrous results to the atolls themselves and to the animal and plant life, both land and marine; and

Whereas, the Micronesian people do not believe that such explosions are consistent with the maintenance of international peace and security; and

Whereas, communication remains, for the most part, slow and inadequate; and

Whereas, firearms and ammunition are freely available in most areas to those who can afford them; and

Whereas, liquor control laws are inadequately enforced; and

Whereas, Micronesians suffer from discriminatory wage scales which permit an indigenous District Administrator to earn less than an American contract high school teacher, strictly on the basis of his national origin; and

Whereas, most Micronesians still live in inadequate housing, and, even in the district centers, without electricity, running water, or adequate sanitation; and

Whereas, on the islands of Kwajalein Atoll, the most rigid form of segregation is practiced, in which Micronesians are not permitted to live on the same islands as Americans, to shop in Global Associates' stores, or even to take home with them anything of any value which Americans might freely give them; and

Whereas, some district hospitals remain inadequately and/or incompetently staffed; and

Whereas, provisions for the health of Micronesians generally are so bad as to render the population sighly susceptible to periodic epidemics of hepatitis, measles, and other diseases; and

Whereas, while there is a general system of elementary education within the meaning of the Agreement, it is, in many areas, inadequately or incompetently staffed, and poorly supplied; and

Whereas, the system of secondary education, such as it is, is a very recent innovation in the Trust Territory, and in many areas still lacks even basic curriculum planning; and

Whereas, excepting a handful of Micronesian doctors, the vocational advancement of the populace has not been advanced at all; and

Whereas, far from promoting cultural advancement of Micronesians, the administering authority has managed to downgrade and even virtually destroy the native culture in certain areas, replacing it with low-grade American mass culture; and

Whereas, it is difficult to see how the pursuit of higher education has been greatly encouraged by the veto of a two hundred thousand dollar scholarship bill; and

Whereas, there is no professional or college-level training institution in the Trust Territory after twenty-one years of United States administration; and

Whereas, the equal treatment which all other members of the United Nations and their nationals receive has been the systematic prohibition of entry into the Trust Territory; now, therefore,

Be it resolved by the Senate of the Third Congress of Micronesia, First Regular Session, 1969, that the manifestly unequal treat-

ment which the Micronesian peoples receive even in their own homelands is positively destructive of the respect for human rights and for fundamental freedoms which the United States under Article 76c of the United Nations Charter, is required to promote; and

Be it further resolved that it is the sense of the Senate, Congress of Micronesia, that no reasonable man could maintain that the United States has acted to "promote to the utmost" the well-being of the inhabitants, as it is required to do under Article 73 of the United Nations Charter; and

Be it further resolved that the Senate, Congress of Micronesia, hereby respectfully petitions the United Nations Trusteeship Council to commission a thorough investigation into the performance or non-performance of the United States Government in the fulfillment of its obligations under the United Nations Charter and the Trusteeship Agreement; and

Be it further resolved that the Senate, Congress of Micronesia, hereby respectfully petitions the United Nations Security Council, under Article 83 of the Charter, to review the entire basis for continuation of the United States' presence in Micronesia, with a view to revision or abolition of the Trusteeship Agreement, as may be necessary to promote to the utmost the well-being of Micronesians; and

Be it further resolved that, failing action by the Security Council, the United Nations General Assembly, under Articles 10, 12, 13, 14 and 16 of the United Nations Charter, is hereby petitioned to review the performance of the United States, as above; and

Be it further resolved that, upon the passage by the Senate, Congress of Micronesia, copies of this Resolution shall be sent to all interested persons and agencies including but not limited to the Secretary General of the United Nations, all member delegations of the Security Council of the United Nations, all Chairmen of all delegations to the United Nations, the President of the United States, all members of the United States Senate and House Committees on Interior and Insular Affairs, members of the United States Senate and House Foreign Relations Committees, the Secretary of the Interior and the High Commissioner.

Adopted January 27, 1969.

We hereby certify that the foregoing Resolution was adopted by the Senate of the Congress of Micronesia, Third Congress, First Regular Session in January, 1969.

AMATA KABUA,
President of the Senate.
VICTORIO UHERBELAU,
Clerk of the Senate.

MARIANAS PASS SHOCK RESOLUTION

AGANA, GUAM.—The Mariana Islands District Legislature has called on the Soviet Union to aid the people of the U.S. Trust Territory of the Pacific, according to the Micronesian News Agency.

The shock resolution was passed on Saipan in the last week of February in an effort to stimulate more U.S. interest in the Trust Territory.

The resolution said the Marianas people have been "disappointed again and again" when seeking help from the United States for political and economic development.

The legislature appropriated $6,000 to send a three-man delegation to the United Nations Trusteeship Council's meeting in May.

The resolution said the Soviet representative to the U.N. Security Council should be asked to approach his government with a request for aid for the Marianas.

The Mariana Islands are part of a U.N. trust administered by the United States.

[From the Honolulu (Hawaii) Star-Bulletin, Mar. 10, 1969]

UNITED STATES PUT MICRONESIA ON PATH OF DEVELOPMENT

Dr. Norman Meller, professor of political science at the University of Hawaii, takes exception with detractors of the United States Administration of the Pacific Trust Territories.

"We are facing today what we ourselves developed," said Meller, Friday, closing a day and a half seminar on Doing Business in Micronesia, held at the Ilikai Hotel by the Hawaii International Services Agency.

To the more than 50 Hawaiian businessmen Meller said, "The U.S. has favored one pattern consistently in the poltical development of Micronesia."

Starting on the municipal level, the American administrators have put the Micronesians on a "path of development" that led to the establishment of the Congress of Micronesia in 1965.

To those who felt the Trust Government moved too slowly, Meller said, it was understandable because "the High Commissioner is accountable to the White House, the Department of Interior, chairmen of the Senate and House Finance and Subject Committees, and to the United Nations . . . seven authorities."

Meller feels there are three alternatives in the political future of Micronesia.

The commonwealth status, he said, is improbable because "not one of 11 trusteeships has become an entity of the administering state."

"Many detractors say Micronesia cannot become independent because it is not economically viable," said Meller, countering, "Micronesians have the advantage of land which the U.S. will need someday for bases."

Meller said another anti-independence argument is "Micronesia is an artificial grouping of six different cultures and an historical happenstance."

However, Meller said, "When people believe it exists, it does. They are developing that historical myth."

The third possibility is the maintenance of Micronesia by another state other than the United States, and possibly by the United Nations, Meller said.

Answering a question posed by a member of the audience, Meller said, "There is a possibility of a political or economic relationship of Micronesia and Japan, and it would be a good tie."

Hampering such a relationship, Meller felt, would be the differences in the political and monetary systems.

"And, Japanese has not been taught in the schools for 25 years," he said, adding, "The chances are they will be associated rather than interrelated."

A member of the audience asked of the possibility of a Hawaii-Micronesia tie.

Meller answered, "This is an absurdity, but despite the absurdity expanding Hawaii's state borders seems to be a most agreeable approach.

"But whether the Guamanians, Americans, Samoans or Micronesians would agree is another thing."

Seminar planners had scheduled a military representative to speak.

Moderator Donald Wolbrink, however, read a letter from Adm. John McCain, Jr., Pacific Commander-in-Chief, who said the military could not provide any "assessments" or participate in "speculative or theoretical discussions" regarding the military's presence in the vast Pacific area.

A member of the audience asked how the Micronesians viewed the American military posture and presence to which Rep. Polycarp Basilius, member of the Congress of Micronesia answered.

He said, "The question is very touchy. It doesn't matter whether you like it, it's there."

Speaking of his home district, Basilius said, "In Palau where we are frustrated with the TT (Trust Territory) government, we accept the military because we think they can help us build roads.

"On Saipan, the legislature has asked that the military operation of Okinawa be moved to Saipan.

"In the Marshalls, they complain that the Army and Coast Guard are taking land and they are unhappy. At Ponape, they welcome the military."

George Ngirarsaol, president of his own firm at Koror and a member of the panel, said, "We prefer the military to help develop our economy, but I'm afraid the military might change the identity of the Micronesians because the military has its own way of running business."

Ngirarsaol conceded, "But whether we like it or not, if they come, they come."

Another panelist Joseph Kramer, who is associated with Acme Importers at Majuro, said, "The military has affected the Marshalls the most in Micronesia, and the feeling there is one of fear of the military."

The appropriation of land "without equitable payment" is the major objection of the Marshallese to the American military, Kramer said.

Francisco Uludong, a journalism and political science major at the University of Hawaii, spoke of "Micronesia for the Micronesians."

Uludong dispensed with his assigned topic "Asia's Role in Micronesia" with "We know the Japanese exist and they are good competition for you (Americans).

"I am just waiting until such time that the competition can be played off!"

Uludong said, "December 7, 1941 was an end and a beginning. It was the end of Micronesia for the outsiders, and the beginning of Micronesia for the Micronesians."

"I don't think the Americans intended the changes we are witnessing there, but the emergence of nationalism which runs counter to the American presence is sometimes subject to the whims of the American government."

"America has succeeded in fostering an outspoken generation. My generation is dissatisfied with the American maintenance of the (Trusteeship) agreement."

Uludong added this final plea to the Hawaiian businessmen, "I hope you are morally responsible to help us gain independence and respect Micronesia for ourselves."

Moderator Donald Wolbrink ended the seminar with a talk on long range planning for Micronesia, stressing the importance of involving the people in planning physical facilities they will be using.

SAFEGUARD—THE ANTI-BALLISTIC-MISSILE SYSTEM

(Mr. TALCOTT asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. TALCOTT. Mr. Speaker, in discussing the ABM controversy, we should remember that ABM are initials for anti-ballistic missiles. Ballistic missiles are nuclear bombs which can be launched from China or Russia to any place in the United States. A single missile can obliterate New York or San Francisco. The Russians have at least several hundred aimed at the United States. China is trying to develop nuclear missiles. We have missiles, but we are committed not to launch until after an enemy attacks us with nuclear missiles. Our defense policy is "nuclear deterrent," a system of missiles—the Minuteman, now—which can achieve a "second strike" with sufficient

power to inflict certain unacceptable damage upon any would-be attacker. An attack could kill and devastate most of our country and possibly knock out our Minutemen. In such event, we "have had it."

I wish there were no international marauders. Maybe that great and wonderful day will come—but it is not here yet. The Communists are committed to overrun us.

The first responsibility of the Federal Government is our common defense. The sole purpose of our anti-ballistic-missile system is to protect our lives, facilities, and our defenses. The more sophisticated and numerous the ballistic missile system of our enemies, the more sophisticated and effective our defenses must be. Any defense is costly; but the alternative of destruction and submission to communism is unthinkable.

Cost is the major factor, right after security. Our best technocracy has been applied.

Antiballistic missiles opponents include some who prefer that we have no defenses—some of these want the Communists to take us over, preferring their society; some believe the Communists would not subdue us even if we declined to resist and had no defenses. Some believe the present ABM system will not function—we can land on the moon, but we cannot intercept a missile or a bunch of them. Some think our effective system would be provocative—cause the Communists to accelerate the missile race. Some think it will cost too much—and we cannot afford to defend ourselves if it costs too much. Some oppose for a combination of these reasons.

I believe President Nixon's Safeguard ABM proposal is the best course now. It provides some defense for our basic second strike missile system; at minimal cost; with a chance to continue research and development; room for bargaining for arms controls; flexibility to cope with developing international threats; but very little protection for our people. A simple defense against nuclear missiles aimed at us cannot be as provocative as building offensive weapons. We can only pray that we will not be attacked before we are better defended.

Few will deny that our earlier perfection of the atomic bomb permitted us to survive World War II. Until world order and justice is achieved by the rule of law, we have a duty to provide for the common defense by the most advanced means known. As present, the Safeguard ABM is an integral part of our national defense.

THE 51ST ANNIVERSARY OF INDEPENDENCE OF BYELORUSSIA

(Mr. FEIGHAN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. FEIGHAN. Mr. Speaker, March 25 marks the 51st anniversary of the Proclamation of Independence of the Byelorussian Democratic Republic. It is very fitting that the Congress of the United States devote time to commend the Byelorussian people and to remind the world that Byelorussia and its people will continue to fight for the reestablishment of complete independence and self-government.

The Byelorussians, who had lived under the czars for several centuries, had their own sovereign and independent state before the birth of the Russian Empire. During the period of foreign rule over their country they carefully guarded many of their national traditions, and had been looking forward to the opportunity to assert their freedom. They therefore seized upon the welcome chance provided by the Russian Revolution of 1917, and proclaimed their independence on March 25, 1918. Then they formed their own democratic government in their capital city Minsk and began to rebuild their war-torn country. A National Constitution was put in force guaranteeing freedom of speech and assembly, liberty of conscience, inviolability of person and home, and equality of all citizens under law. The new Government made significant advances in education, culture, and social welfare. It obtained recognition from a number of countries.

Unfortunately the Byelorussians were not to enjoy their richly deserved freedom for very long. In December 1918 the Red army overran Byelorussia and annexed it to the Soviet Union. Today, let us therefore express our fervent hope that the day may not be too far in the future when the March 25 anniversary of Byelorussian independence may again be celebrated in a Byelorussian nation enjoying the blessings of freedom and liberty.

PROPOSAL TO EXCLUDE POW'S FROM TAXATION

(Mr. BOB WILSON asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BOB WILSON. Mr. Speaker, at the moment there are 333 known American prisoners of war in Southeast Asia and almost a thousand other Americans listed as missing in action. Although these figures seem small compared with the staggering casualties of the war, we must not overlook the hardships these Americans are forced to endure in Communist captivity. Also, we must not forget the mental anguish suffered by their wives and families as they anxiously await the safe return of loved ones.

Last fall, I had the opportunity to meet with a group of POW wives who reside in my district of San Diego, Calif. Although our Government is doing everything possible within the bounds of existing laws to assist these families, certain inadequacies in these laws do exist and should be corrected. I am today introducing a package of three bills aimed at correcting these inadequacies.

In 1967, Congress approved a measure allowing prisoners of war and servicemen in a missing status to participate in the uniformed services savings deposit program which provides 10 percent interest on savings up to $10,000. What Congress failed to recognize, in approving this bill, however, is that the American prisoner in Southeast Asia has no control whatsoever over his return from overseas. Thus, an American who is held captive for several years would accumulate deposits considerably more than $10,000—even after the necessary allotments for his dependents were deducted from his pay. One of the bills I am introducing would remove the $10,000 limit on deposits for any member of the uniformed services who is a prisoner of war, missing in action or in a detained status during the Vietnam conflict.

Another inequitable situation exists with respect to prisoners of war. A good number of these men are enlisted servicemen with relatively low pay, and it is their dependents who suffer the most financially during their absence. Part of the economic hardship results from the fact that there is no man around the house to perform routine maintenance chores. The armed services have recognized this problem to some extent by providing a $30-a-month family separation allowance to servicemen, E–4 and above, whenever the servicemen's duties require him to be away from the home for more than 30 days—provided that his family does not live in military housing.

A second bill I am introducing would remove these restrictions. In other words, all prisoners of war and servicemen in a missing status—regardless of whether their families live in military housing or whether they are E–4 or above—would be entitled to the family separation allowance.

Much has been said about current legislation to forgive Federal income taxes for the *Pueblo* crew while it was held captive by the North Koreans. Our distinguished chairman of the House Ways and Means Committee has introduced a bill to carry out this proposal. Why should we not grant the same forgiveness of Federal taxes in the full incomes of American prisoners of war in Southeast Asia? This would be little recompense, indeed, for the tremendous sacrifices they are making for their country.

At present enlisted men are given a full tax deduction for basic pay received in the combat area. The exemption for officers is limited to $500 per month. While this situation may be equitable for those assigned a 1-year tour of duty, I feel this is not so for those held captive against their will for extended periods of time. Since many of the known American prisoners of war are pilots, whose monthly incomes exceed $500, I feel that such tax relief is more than justified in their cases. Therefore, the third bill that I am introducing would exclude from taxes the full pay of all members of the Armed Forces who are POW's missing in action or in a detained status.

I feel very strongly about the need for these three bills and hope that rapid and favorable action will be scheduled in the near future.

YEAR 1969 MARKS 50TH ANNIVERSARY OF GOODWILL INDUSTRIES OF CHICAGO AND COOK COUNTY, ILL.

(Mr. ANNUNZIO asked and was given permission to address the House for 1

minute, to revise and extend his remarks and to include extraneous matter.)

Mr. ANNUNZIO. Mr. Speaker, as the Congressman who represents the Seventh Illinois Congressional District, where the headquarters of Goodwill Industries of Chicago and Cook County, Ill., are located, it gives me great pleasure to call to the attention of my colleagues in the House of Representatives and to the American people the observance of this outstanding organization's golden anniversary which is taking place during 1969.

Goodwill Industries has served for 50 years—without regard to race, creed, or national origin—thousands of physically handicapped, mentally and emotionally disturbed, and socially and culturally deprived people. A national movement begun in Boston in 1902 by Dr. Edgar J. Helms, a Methodist minister, Goodwill Industries laid down its roots in Chicago in 1919 simply, humbly and without fanfare. It was the development of the Methodist Mutual Aid Union, an organization representing the combined efforts of Chicago Methodism, existing for the purpose of gathering cast-off material and selling it to poor people at a nominal cost.

Chicago Goodwill Industries opened shop with just five workers in the basement of an old church on the city's West Side, aptly described half a century ago as a building which in its old age served its intended purpose so well it is now doing its dying best to serve its present task. The aim of this nonprofit agency was to undertake the challenge of giving to handicapped people a chance to earn a livelihood and enjoy the social, moral, and spiritual blessings of society.

The number of times it moved to keep pace with its increasing and expanding services to the vocationally handicapped has dimmed with the passage of time. Today its five-story modern rehabilitation facility stands tall on the skyline of the same west side—a shining beacon of hope to nearly 2,000 disadvantaged people who come to its doors yearly seeking not charity but a chance.

Vocational rehabilitation was a relatively unknown concept when Chicago Goodwill Industries first opened its doors. But today it is a unique, self-help process encompassing in-depth interviewing, scientific evaluations, group and individual counseling, work adjustment programs, formal on-the-job training, and selective job placement.

The value to the Chicago community of these vocational rehabilitation services resulted in Chicago Goodwill Industries helping to place in the local labor market in the past 5 years, 1,330 men and women who otherwise might have been burdens on the State or family.

The vocationally handicapped whom Chicago Goodwill Industries serves earn while they learn. They want the dignity a paycheck provides rather than the stigma of accepting welfare money because they could not find employment in the competitive labor market or they had to depend on family or friends for support. In 1968, the agency's workers and trainees received wages totaling more than $1,450,000. Their productive efforts resulted in their paying approximately $318,000 in Federal income and social security taxes, notwithstanding thousands of dollars they paid in local and State taxes.

Chicago Goodwill Industries' enviable record in rehabilitation was attained in the face of cruelly rising costs. But the agency has accepted today the challenges of tomorrow to give the less fortunate fuller, more rewarding lives. At considerable expense it has developed a new and unique scientific testing program aimed at making employable increasing numbers of disadvantaged people who earnestly desire a bright future of steady jobs with steady wages.

Through this scientific program, known as MOVE an individual's vocational aptitudes and interests are measured by means of a series of job sample tests, job tryouts, and actual work experience within the agency. Thus is created a multidimensional job profile from which is developed the vocational program planning that renders a person employable in private industry.

Chicago Goodwill Industries' first 50 years have been recorded on the pages of time with the notation "Well done." Now it looks confidently to the future when it can implement even more the charge given by Dr. Helms, founder of the National movement, back in 1902 that:

> Let us be dissatisfied with our work until every handicapped and unfortunate person in our community has an opportunity to develop his fullest usefulness and enjoy a maximum of abundant living.

I would like to take this opportunity to express my sincere appreciation, and indeed, the gratitude of all Cook County residents for the great record of accomplishment compiled by Goodwill Industries, and to commend the officers of this fine organization for their contribution to its success. They are: M. Glen Miller, president; Elmer W. Lenz, vice president; R. C. Wieboldt, Jr., vice president; Carl M. Blumenschein, vice president; Richard P. Miller, vice president; S. N. Tideman, Jr., secretary; Lynn G. Sahlin, treasurer and assistant secretary; George P. Thermos, assistant treasurer; Edward W. Lyman, Jr., assistant treasurer; Executive Director William Rogolio; Public Relations Director Paul Hoffman; Directors Laurance H. Armour, Jr., Kenneth E. Campbell, Philip V. Carter, Paul M. Corbett, John M. Coulter, John David, George H. Dovenmuehle, Robert G. Gibson, Benjamin J. Gingiss, Gerald A. Gitles, Robert M. Hoffer, Edward C. Holmblad, M.D., William Ingram, Henry S. Kahn, N. Hall Layman, Samuel N. Lebold, Fred G. Litsinger, Mrs. B. J. Maiworm, R. P. Merridew, Lester R. Minion, D.D., Richard S. Oldberg, William G. Olson, Luther I. Replogle, Alfred Slicer, Lee D. Smith, Leonard Spacek, Stanley W. Tate, Percy J. Trevethan, L.H.D., Oliver W. Tuthill, Maynard P. Venema, Vern E. Whaley; and Honorary Directors John L. Dole, Nathaniel Leverone, Bert R. Prall, Thomas M. Pryor, Bishop, Henry F. Tenney.

I know that in the years ahead, Goodwill Industries of Chicago and Cook County will remain in the forefront of leadership for the physically and mentally handicapped. To the handicapped Goodwill Industries is not a charity—it is a chance. Mr. Speaker, to this great organization I extend my congratulations on its golden anniversary and my best wishes for continuing success in its worthy endeavors.

MILITARY BASES IN SPAIN

The SPEAKER pro tempore (Mr. MATSUNAGA). Under a previous order of the House, the gentleman from New York (Mr. LOWENSTEIN), is recognized for 60 minutes.

Mr. LOWENSTEIN. Mr. Speaker, I rise to discuss the questions presented by the expiration tomorrow of the agreement providing for American air and naval bases in Spain. Questions raised by these bases seem especially significant at a time when so many decisions must be made about America's role in the world and about the relationship of military expenditures to the national tax burden and priorities.

Could this money be better spent to meet domestic needs?

At what cost would these bases exceed any possible military value?

Could the continued existence of these bases "commit" the United States to protecting a government that lacks popular support in its own country and which must resort to extreme repression to remain in power?

Have the negotiations for these bases been conducted without civilian participation or have they led to the sort of alliance which should constitutionally require the advice and consent of the Senate?

I hope we shall open what will become a general discussion of these and other pressing questions so the American people can consider the impact of this decision—a decision that will have considerable effect on policies of consequence at home and abroad.

I yield at this time to the distinguished gentleman from New York (Mr. PODELL) for remarks on this question.

Mr. PODELL. Mr. Speaker, I thank the gentleman for yielding.

It is patently obvious that Europe's agile and durable Fascist, Francisco Franco, dear friend and comrade of Adolf Hitler, has been attempting to blackmail America over renewal of the 15-year-old bases agreement. Four hundred million dollars worth of facilities are at stake, as Spain seeks to extort from our country a prohibitive price, including a broad promise of defense for Spain and major quantities of military hardware. Although the price seems to have been lowered recently, it is sad to see us come to this.

Must the United States lie down and grovel at the boots of the dictator who "pacified" the Basques. Must our country jump through a hoop held by the man who provided Adolf Hitler with the "Blue Division," which gave its all for the Nazis in combat. Must America beg for favorable treatment from he who sheltered innumerable Nazi murderers fleeing the hangman's noose—protector of Otto Skorzeny and Juan Peron. It leaves a bitter taste in any honest man's mouth to see us cater to whims of this dictator,

who managed to evade the justice meted out after World War II to others of his ilk.

This is the man who employed the Condor Legion of Nazi flyers to pulverize cities full of his own people. The man who unleashed his Foreign Legion and Moorish soldiery on his brethren. They remember the Moors at Oviedo. It was he who allowed a Falangist service for Hitler to take place in Madrid on May 10, 1968, where participants sang the Horst Wessel Lied as they came onto the street.

Here is the man who ordered executions by the thousands, legitimized sentences by military tribunals and brought terror to every corner of Spain. This is the freedom-loving gentleman who only recently suspended freedom of speech, assembly and association as well as all guarantees against unwarranted search and detention.

Now he masquerades as El Caudillo, the man who brought peace to suffering Spain. He brought peace, all right—peace of graveyards and prison cells—peace that comes after echoes of a firing squad have ended. Peace that came when all his oponents were dead, in prison or driven into exile.

How sad it is to see our country convincing itself that to remain free or fulfill its obligations we must deal with this dictator and his minons. By no stretch of any wildest imagination can we say that Franco and his bully boys are lovers or defenders of any freedom, except that to do ill unto those who oppose them.

Mr. Speaker, I question the real worth of these Spanish bases. Technological advances have eliminated much of the need for them. We are losing valuable foreign exchange by our major presence there. This ignoble chapter in our American story is long overdue for closing. Let us tell Franco what he can do with his bases, ideology and promises. Let us then forthwith pack up and depart from his sunny national prison. The facts speak for themselves.

I am totally out of patience with America's policy of lying down with dictators of the world. If it is not a Perez Jimenez, Peron or Stroessner, then it is a Franco. As our technology advances, surely we are not going to remain dependent upon such people and the regimes they have created.

Mr. LOWENSTEIN. Mr. Speaker, I thank the distinguished gentleman for his most helpful contribution.

Mr. Speaker, I want to talk now about the cost of these bases relative to the cost of other items on the national agenda. Americans generally will be concerned to know at a time of enoromous tax burdens and delayed domestic programs whether the money needed to continue these particular installations would be wisely spent.

We have contributed over the years more than $2 billion in economic and military aid to the upkeep of the Spanish Government in return for the bases.

That $2 billion, could have produced 35,500 classrooms in the United States, or new facilities for 1,065,000 students. $2 billion could have supported Headstart programs for 1 year for 1,904,000 children.

The Spanish Government is reported now to be asking $300 million for the renewal of the bases. This same money would buy enough food stamps to feed 1,875,000 people, which is a substantial part of the population of the United States that still suffers from chronic malnutrition.

And it pays to remember in this connection that as far back as 1959, Congressman PASSMAN of Louisiana, remarked:

> Every year that we have earmarked a certain amount of money for Spain, the Administration has spent much more money out of support funds for Spain than the amount earmarked.

It is now suggested that the U.S. Government is prepared to pay what is usually described as "only" $140 million; $140 million would provide food stamps for only 875,000 people.

These sums may not seem worth quibbling about in a total annual defense budget of $80 billion, but one must start somewhere. Mr. Speaker, why not here? Why not now? $140 million or $300 million beyond $2 billion already—is this expenditure really necessary?

Furthermore, every penny spent on these bases aggravates the balance-of-payments problem. We ask American businessmen to curtail overseas investment, we put unpleasant restraints on the American people, to save much less than is spent in this one peculiar enterprise.

Congressman REUSS, of Wisconsin, wrote a letter to the Secretary of the Treasury on March 22, about this aspect of the economics of this whole affair:

> I write to you in my capacity as Chairman of the Subcommittee on International Exchange and Payments of the Joint Economic Committee, and your capacity as guardian of the United States balance of payments, to express my concern about the impact on our payments position of another renewal of the 1953 bases agreement between Spain and the United States.
>
> After a period in which renewal appeared in doubt, negotiations between Spanish and U.S. representatives now seem to be going forward, and may continue beyond the March 26 deadline originally set for agreement. As is well known, the recurrent United States balance of payments crisis is almost entirely caused by our overseas military operations. Yet neither the Pentagon nor the Department of State has seemed overly concerned by the payments damage wrought by these operations.
>
> The Spanish bases question offers an opportunity to the Department of the Treasury to bring to bear a business-like cost-benefit analysis on military operations affecting our balance of payments. Of the three major air bases involved, one is already on a "caretaker" basis. All three have greatly diminished in strategic value as U.S. military capabilities have advanced. The submarine base at Rota appears to be useful but not absolutely vital to U.S. security. Moreover, given political uncertainties in Spain, the availability of these bases at some future time seems open to doubt. Certainly, the present number of American military personnel and dependents in Spain—some 25,000—seems excessive to need.
>
> In sum, the time is obviously ripe to let balance of payments considerations weight heavily in determining the future level of the U.S. military presence in Spain.
>
> Since the original bases agreement of 1953, the Spanish reserve position has greatly improved, and the U.S. reserve position has greatly worsened. Between 1953 and 1968, U.S. reserve position has greatly worsened. Between 1953 and 1968, U.S. reserves (gold and convertible currencies) decreased from $22.09 billion to $14.42 billion. In the same period, Spain's reserves increased from $150 million to $1.09 billion.
>
> Furthermore, between 1960 and 1965, Spain was a net purchaser of U.S. gold in the amount of some $758 million, and at a time of great embarrassment to the United States. The gold component of Spanish reserves at the end of 1968 was some 72 percent of reserves, or $785 million.
>
> Just as the U.S. gold loss in recent years may be largely traced to our military involvement abroad, so Spain's improved reserve position may be attributed in large measure to the U.S. military presence in Spain. The direct foreign exchange cost to the United States, and the gain to Spain has averaged close to $50 million a year in recent years, in terms of outlays by the U.S. military and their dependents, and salaries for Spanish employees. As maintenance costs rise, this figure will inevitably increase.
>
> I respectfully urge you to present these considerations at the highest level of the U.S. negotiating team. It is high time we stopped endangering the world position of the dollar and restricting American trade and investment abroad by letting foreign military operations that yield marginal military benefits at great cost to our balance of payments go unchallenged. I wish you every success.

In short, the question goes far beyond how much it will cost to renew and operate the bases. We are entitled to ask—we are not entitled not to ask—how much do these bases add, if anything, to American security, and what would it cost to do the job in other ways? The B–47's for which the airbases were originally built are no longer even part of U.S. defense forces. Our submarines can be based in the United States and elsewhere—and almost as conveniently—as at Rota.

President Truman, years ago, was unconvinced of the military necessity for bases in Spain. Then in 1963, we were assured that that extension was the last that would be needed, that in fact the airbases would be phased out because weaponry advances would make them unnecessary. There are, it seems, constant assurances from the military that bases will later on be unnecessary. But later on seems always to be yet later on. One scours the mind for an occasion when the military have acknowledged that "later on" has finally arrived.

So once again—much "later on" since the last renewal—we hear that "later on" is still to come. When, Mr. Speaker, when is it later on?

Senator SYMINGTON, one of the great authorities on military affairs in the Congress and former Secretary of the Air Force, thinks when is, in fact, now; that it is in fact at last "later on." He said in the Senate yesterday:

> This country does not have the financial resources necessary to continue leasing military installations which were constructed originally under defense policies that now appear obsolescent to the point of being obsolete.

And Business Week magazine, in its issue of September 1968, said:

> With changes in weaponry, equipment and mobility: U.S.-based and submarine-based missiles have, for example, lessened the need

for air bases abroad. Satellites are diminishing requirements for foreign communications and electronic spy stations. The giant C–5A transport plane will enable troops and their equipment to reach trouble spots quickly from U.S. bases.

Thus, one wonders if anyone can make a case that would justify the existence of the Spanish bases in terms of defense needs, of responsible fiscal programing, of national priorities or of wise global policy.

With regard to this last point, Mr. Speaker, this House should be reminded of President Nixon's comment during the campaign:

Other nations must recognize that the role of the United States as world policeman is likely to be limited in the future.

The President has since expanded on this idea. On March 4, he was asked at a press conference:

Mr. President, there has been some concern in Congress about reports that a general in the Pentagon took the initiative in arranging for the U.S. to recognize a threat to Spain from North Africa. In your opinion, is this concern merited, and what is the policy of your administration about carving out new commitments to other countries by the United States?

The President's reply was:

Well, I think as far as commitments are concerned, the U.S. has a full plate. I first do not believe that we should make new commitments around the world unless our national interests are very vitally involved. Secondly, I do not believe we should become involved in the quarrels of nations in other parts of the world unless we are asked to become involved and unless also we are vitally involved. I referred earlier to even the quarrels and divisions in Western Europe. I stayed out of most of those up to this point, and I intend to in the future.

Mr. RYAN. Mr. Speaker, will the gentleman yield?

Mr. LOWENSTEIN. I yield to the distinguished gentleman from New York (Mr. RYAN).

Mr. RYAN. Mr. Speaker, I should like to commend the distinguished gentleman, my colleague from New York (Mr. LOWENSTEIN) for taking this time on the eve of the day when the leases for the four military bases in Spain expire in order to bring before the House the very important question of whether or not the United States should continue to maintain the bases in Spain.

Negotiations for the extension of the leases are now in progress. This is being done at a time when the extent and character of U.S. commitments abroad is being called into serious question, and moreover, when the imbalance in our present budgetary priorities is clear. It is important that we understand these priorities and that we thoroughly examine the propriety of extending the leases with an eye toward determining both the military need for these bases and the political implications of channeling additional financial support to the Franco regime, a regime which has shown repeatedly over the years its unwillingness to grant basic civil liberties to its citizens.

Not only that, but there is another important question involved. Articles which have appeared recently, one in the New York Times of February 26 and one in the Washington Post of February 25, reported that the military had attempted to pressure the State Department into signing an agreement which contains a U.S. pledge to defend Spain as if it were a NATO country and also to defend Spain against attack from North Africa in exchange for Spain's extension of the leases.

Mr. Speaker, this is a most serious matter because it again indicates that the State Department is not exercising primary responsibility but that the Pentagon is playing a key role in developing foreign policy.

Insofar as the military need for these bases is concerned, it appears that they are now obsolete. Senator SYMINGTON yesterday on the floor of the other body made that point very clear. The Air Force admits that of the three airbases, only one is being used at this time, and that only for the maintenance of fighter interceptors. The bases were built to service and maintain the B–47, which has long since been retired, and they are not adequate to handle our advanced aircraft of today. By the same token, the naval base is not really a necessary item for the servicing and maintenance of our Polaris submarines.

It seems to me clear from a political and military point of view that the leases for the bases should not be extended.

The benefit which Franco has gained from these bases should not be underestimated. The Spanish economy was extremely shaky in 1950, 3 years before the ratification of the bases and related agreements. Many economic observers at the time believed that Spain was on the verge of bankruptcy and that, in the absence of outside aid, the Franco regime would be unable to withstand the pressures from within Spain to liberalize and modify the totalitarian institutions which Franco had instituted after the end of the Spanish Civil War of 1936–1939. Britain and France declined to provide Franco with economic or military assistance. However, the United States viewed Spain as a potentially valuable ally in the construction of the defense system which was being built to ring the Soviet Union. Negotiations on the acquisition of the four bases were begun in 1951 and were concluded on September 26, 1953. The agreements which were signed at that time consisted of three parts:

First. A defense agreement authorized the development, maintenance, and joint utilization on Spanish territory of "such areas and facilities as may be agreed upon," the sovereignty therein to remain Spanish. The agreement was to continue in force "for a period of 10 years, automatically extended for two successive periods of 5 years each" unless terminated by notice given in September 1963 or September 1968 and effective 18 months later.

Second. A military defense assistance agreement obligated the United States to provide military equipment and supplies, and funds for military expenditures by Spain. The agreement has no terminal date but is subject to cancellation on notice.

Third. An economic assistance agreement, to remain in effect until June 30, 1956, but subject to cancellation on notice. This agreement was renewed periodically but expired in 1963. Deliveries of aid materials continued until 1964.

The agreements comprised the original "Pact of Madrid Mutual Defense Treaty".

The base agreement was renewed in 1963 for 5 additional years and formally expired on September 26, 1968. After that, the two governments had a 6-month period in which to negotiate a new agreement. If the two governments could not agree, the United States would be obliged to withdraw the 25,000 American servicemen and dependents now stationed in Spain within 1 year to close down the bases. The 6-month period expires tomorrow.

Military assistance to Spain in exchange for the right to operate these bases has amounted to about $1.7 billion since 1953. In addition, the bases now bring Spain about $40 million a year in local American spending.

Last summer Spain specified an additional $1 billion in military aid as the price of renewing the leases on these four American bases. That sum was subsequently scaled down to $700 million. Even the lesser sum, however, represents a sevenfold increase in the amount of aid provided by the 1963 renegotiation, $100 million.

According to press reports, there were other demands as well, including a commitment to come to the aid of the Franco regime in the event of a Soviet-inspired attack against Spain from North Africa, a commitment from the United States to assist Spain in her efforts to regain Gibraltar from the British, and the obligation to defend Spain under the NATO agreement as "an integral part of Western Europe." All of these demands would have a far-reaching impact on future American commitments if the United States agreed to them.

The manner in which the U.S. Government has carried out negotiations for these bases during the past year also raises some fundamental questions about the way in which far-reaching commitments can be made. According to published reports in both the Washington Post and the New York Times, the negotiations were first carried on by a military man, Maj. Gen. David A. Burchinal, Deputy Commander of the U.S. forces in Europe. General Burchinal, acting without consultation with the Department of State, accepted at least two of the Franco government's demands—assistance in the event of attack from North Africa, and Spain to be defended in the same manner as a member NATO country.

The status of General Burchinal's "commitments" on behalf of the United States is in doubt at this point. Although, the Department of Defense has denied that the general has made any "irretrievable" commitments, it has not yet said whether or not the signed minutes represent "agreed views" which constitute the basis for further talks between Madrid and Washington, as General Burchinal insisted they did.

The dangers posed by this kind of "negotiation" are extremely serious. It is

disturbing to contemplate what kind of "commitments" might result if the military is allowed to carry on negotiations on issues which are essentially diplomatic and political in nature. Congress must insist that any such commitment—particularly which would oblige us to come to the defense of a totalitarian and repressive regime—not be made by the Pentagon and that Congress be consulted before any such far-reaching agreement is ratified by the administration.

The facilities which the United States has constructed under past agreements with Spain include a 12-mile long naval and air station at Rota on the Bay of Cadiz; three airbases—near Zaragoza in the northeast, at Torrejon near Madrid in the center of the country, and at Moron near Seville in the south. In addition, the agreement provides for two additional naval facilities at El Ferrol and Cartagena—which are used to store supplies—and two minor airbases at San Pablo and Reus. There are also six radar sites on the mainland and one on the island of Mallorca, and a pipeline, 485 miles long, from Rota to Zaragoza, which is used to pump oil between the two bases at those locations.

The military value of these bases is, if not completely negligible, at the least dubious. According to the Washington Post of March 17, the strongest language one can extract from the Pentagon with respect to the value of these bases is that they are "desirable." The utility of the airbases is particularly questionable, especially in light of the development of intercontinental missiles and missile-carrying submarines which can be deployed from almost anywhere in the world. The Polaris submarine facility at Rota provides a convenient location to service the submarines at a marginally lower cost than if they were serviced at the eastern coast of the United States. But the savings afforded by this base is minimal and hardly essential to our overall Mediterranean force.

Beyond strategic considerations is the more fundamental question of whether or not the United States should be providing any aid whatsoever to Franco Spain. As I have indicated earlier, military and economic aid from the United States has helped to maintain Franco ever since the early 1950's. The effect of the infusion of additional U.S. military aid into Spain on the development of democratic Spanish institutions must be considered. The effect will be to place the weight of the United States behind the Franco regime and against those who seek to substitute democratic rule for the one-man authoritarianism which has characterized Franco's rule from the beginning. No amount of explanatory denials or private briefings from the White House will negate the effect of supplying more military hardware to Franco.

In the past week there have been reports that the Spanish Government is now lifting press censorship and relaxing restrictions on civil liberties. The coincidence of the new "liberalization" with the approaching deadline in the negotiations period for the bases should not be lost by the administration. In 1962 Franco used a similar ploy to try to pave the way for future Spanish association with the European Common Market. The occasion for that brief liberalization of the political climate coincided with Great Britain's efforts to enter the Common Market. Great Britain was at the time Spain's best customer abroad and, if Britain had joined the Common Market, economic consideration seemed to dictate some kind of Spanish connection with the European economic entity—perhaps as an associate member. In order to win admittance to the Common Market, it was necessary to create a "new image" of Spain in the eyes of the Western European social democrats, from whom Franco had deliberately sealed off Spain for two decades.

Just at the moment when Spain seemed on the road to social and political democratization, General de Gaulle vetoed Britain's application for the Common Market. With the economic pressures to join the Market gone, Franco almost immediately returned to the policies of press censorship and tight regulation of civil liberties which he had only a few months before relaxed.

We should not be too surprised if the newest version of Franco's "liberalization" also turns out to be founded on public relations concerns. We should additionally keep in mind the fact that the additional military aid which Franco would receive from any agreement would almost surely be used to squash incipient opposition to him in Spain. After nearly two decades of propping up the Franco regime, it is time to withdraw support from Franco in the interests of furthering the democratic evolution of Spain. To pour more money into Spain would only result in a strengthening of the totalitarian system of rule that has prevailed in that country since the end of the Spanish Civil War.

One more issue needs to be touched upon. That is the question of the effect of the ratification of a new agreement on these bases on the way in which the United States regards events in Spain. So long as we continue to maintain military bases in Spain, the fact of those bases will always be a factor in determining our response to who rules in Spain. The military will want to know what anti-Franco elements will do with the bases and whether or not they will remain amenable to future military operation in Spain. The presence of the bases means that military considerations will come ahead of political considerations. And the result will be the formulation of foreign policy based on preestablished military commitments, rather than military strategy following political aims, as should be the case.

As the Washington Post of March 17 stated:

> This agreement appears to have very little to recommend it. It does not appear to be favorable to American interests on any grounds, military, political or economic, and in fact would tend to bring this country into disrepute with exactly those elements, in Spain and out of it, who should be our allies.

At a time when funds are desperately needed for the solution of urgent housing, education, and employment needs in our country, the money which the Pentagon contemplates providing to Franco Spain—whether it be $700 million or $100 million—could be far better spent on the solution of our own domestic needs. I urge the Congress to make clear to the administration that the leases should not be extended and to insist that the money be redirected instead towards the solution of the problems of our own society.

Mr. LOWENSTEIN. I thank my distinguished colleague for the insights he has added here.

Mr. BINGHAM. Mr. Speaker, will the gentleman yield?

Mr. LOWENSTEIN. I am happy to yield to the gentleman from New York.

Mr. BINGHAM. Mr. Speaker, I am grateful to my colleague from New York, Mr. LOWENSTEIN, for his leadership in organizing today's discussion of our relationship with Spain. As you have already heard, his timing is particularly apt. Tomorrow, March 26, will, if we are wise, mark the beginning of the end of our 15-year-old defense agreement with Spain. I fear that we shall not be that fortunate, but I do want to add my voice to those who are urging just such a parting of the ways as very much in the best interests of the United States.

You have heard, Mr. Speaker, or will hear from others here this afternoon, the variety of good reasons for permitting our 1953 defense agreement with Spain to lapse. I should like to review these arguments, and the background to this accord, only briefly and then focus on the issue which strikes me as central to the entire question—the extent to which we permit our national policies, foreign and domestic, to be dictated by military considerations.

My colleagues will recall that the United States signed a trio of agreements with Spain on September 26, 1953, after 2 years of negotiations which spanned both Democratic and Republican administrations. Our action was motivated largely by the concerns which grew out of the Korean war. We were trying to build a worldwide base network as part of our "containment" effort, and Spain was seen as a choice location. For the Spanish Government of Generalissimo Franco, the pacts offered a heaven-sent opportunity to break out of the diplomatic isolation which their policies during World War II had led the wartime allies to impose on them.

So the deed was done. The three agreements signed on that September day in Madrid covered economic aid, defense, and mutual defense assistance. They provided the framework for the United States to build and operate bases in Spain, and for the Spaniards to start profiting from the growing American programs of aid for the less-developed countries of the world. Three air bases, a naval base, and supporting facilities were hurriedly built during the 1950's at a total cost of over $395 million. The Spanish role as a so-called bulwark against communism has been bolstered with over $625 million in American military aid through fiscal 1968. And the Spanish economy has been stimulated by

the infusion of over $1.5 billion in economic aid from the United States.

The agreements were entered into, in essence, for military purposes. They comprised a package which we felt in 1953 was necessary to our national security. We needed the bases; we needed a strong Spain as a potential partner in resisting Soviet expansion. The economic price, and the political price of becoming a virtual ally of a dictatorship ostracized for a decade and a half by most of the world, became a secondary consideration. One sop to democracy was inserted in the preamble of the economic aid agreement, in the form of a sentence by which the two signatories recognized "that individual liberty, free institutions, and genuine independence in all countries, as well as defense against aggression, rest largely on the establishment of a sound economy." But none of this language crept into the operative paragraphs of any of the agreements, so the Spanish Government was spared any potentially embarrassing obligation to move toward a more open society as part of the price for its friendly relationship with the United States.

Initially, the chief American strategic interest lay in our three airbases in Spain. From Zaragoza in northeastern Spain, from Torrejon on the outskirts of Madrid, and from Moron in the south, the B–47 bombers of the Strategic Air Command maintained regular patrols along the periphery of the Soviet Union as part of the nuclear force which constituted our deterrent to war. Over the years, B–52's replaced B–47's, and ballistic missiles have since pretty much put even the B–52's out of the strategic deterrent business. The focus of our strategic interest shifted then to the naval base which we had built at Rota, on Spain's Atlantic coast. For Rota became, and still is, one of just three oversea bases equipped for servicing and repairing our nuclear submarines. The airbases, meanwhile, changed character. Zaragoza was put into "caretaker" status; Torrejon became home base for tactical fighter units rotating from areas with poorer weather and for transport aircraft; and Moron came to house air-sea rescue units.

Thus, one factor to be weighed in the balance as we consider the future of our defense agreement with Spain is the current value of the installations it permits us to maintain there. In pure dollar value, the replacement cost of the bases in Spain has been estimated at slightly over $1 billion. But what about their military value? For it was our sense of urgent military need that led us to pay the initial price for their construction, and presumably this same consideration should also weigh in the decision on their retention.

Where opinion in 1953 was heavily in favor of the bases, however, opinion in 1969 is decidedly mixed. Let me give a few examples from the past 6 months. Warren Unna, writing in the Washington Post of September 17, 1968, said:

> U.S. officials reportedly consider that the air bases now have been phased out by long-range missiles, but that the Rota naval base still is very important.

The Washington Daily News on the same day reported:

> The new agreement will reduce the number of air bases from three to two. The U.S. wants to close its base at Zaragoza, in northeast Spain, because tactical advances have ruled out the need for it.

On September 26, the Spanish Government suggested closing of the base at Torrejon. In their statement, the Spaniards noted:

> The base is situated near Madrid, Spain's capital of more than three million inhabitants and now the center of an important industrial area . . . The Spanish Government would welcome its removal.

The Washington Post added on September 27:

> While U.S. authorities concede that the loss of the Rota base in particular would pose a problem for the Pentagon, it would be a loss the military could live with.

The most detailed single exposition of current views, based on the opinions of unnamed "analysts," appear under Benjamin Welles' byline in the New York Times of September 28, 1968. Mr. Welles reported as follows:

> The bases are "important, but not vital" . . . The base at Rota, one of three overseas Polaris bases, was useful but could be dispensed with.
>
> Of the three air bases, Zaragoza is already on a "caretaker" basis. Torrejon, built near Madrid at Spanish insistence, can be closed, as the Spanish are now suggesting, to avoid making Madrid a nuclear "target."
>
> The third big base, at Moron de la Frontera, near Seville, serves as a take-off point for the tankers that refuel B–52 bombers on patrol . . . Its loss would be inconvenient but not grave, experts say.

These varied accounts differ in some detail, but are consistent in suggesting that our bases in Spain are of only marginal value for the 1970's. As the Washington Post noted only last week, " 'Desirable' is about the strongest word one can in good conscience extract," while former U.S. Ambassador to Spain Angier Biddle Duke once referred to the bases as "just a convenience to the United States." And the distinguished chairman of the Subcommittee on Europe of the Foreign Affairs Committee (Mr. FARBSTEIN) said on March 4:

> These facilities are no doubt convenient, but not so essential to national or Western security as to justify an unreasonable commitment of scarce military or economic resources.

Under these circumstances of marginal military value, how shall we evaluate the political costs of a defense agreement with Spain? This is, after all, not merely a run-of-the-mill dictatorship such as we have so cavalierly supported elsewhere in the world. This is the last surviving dictatorship based on the political concepts we fought against in World War II—the last surviving dictatorship whose sympathies in that conflict lay with our enemies. And the Franco government has changed its coloration only slightly in the ensuing years, despite the vast changes which have swept across the rest of the globe. A brief period of "liberalization" undertaken in 1966 never bore full fruit, and was abruptly—and brutally—reversed in January of this year with the proclamation of a "state of exception." Once more, the Spanish press was subjected to full censorship; key articles of the Organic Law were suspended; and police power to arrest, interrogate, banish or imprison opponents of the regime was virtually unchecked. The "state of exception," interestingly enough, is ending today, 1 month ahead of schedule—a piece of timing which coincides a little too neatly with the resumption of base negotiations to be accepted as pure coincidence.

Should this, then, be our choice for a partner in a defense agreement? It must also be remembered that Spain is not merely a right-wing dictatorship internally, but it is a country whose Government is willing to flirt with the Soviets and threaten "neutrality" as a means of pressuring us to comply with its demands. Spain, in 1953, may have looked like the most solid and enduring of allies. But Spain, in 1969, is a would-be ally which has made tentative offers to the Soviet Union for limited base rights and which has proposed the removal of the U.S. 6th Fleet from the Mediterranean. It is also Fidel Castro's best friend in Europe, and one of Cuba's most helpful trading partners outside the Communist world. Its national flag airline is the only non-Communist carrier providing regular service to Havana.

We have long accepted, in this amoral world, that allies are all too often bought. But "bought" allies like Spain are usually a bad bargain, and this is nowhere so clearly demonstrated as in cases like this where they show a reluctance to stay "bought" unless the price is constantly increased.

Yet it can be said, with some reason, that the political cost to us elsewhere has been relatively limited even though we have borne the Spanish incubus for 15 years. How, then, can we argue for a shift in policy on political grounds? The argument here rests, I think, on the currents of change which are moving backward in Spain and forward elsewhere in the world. When we made our initial decision in 1953, security considerations were judged to be paramount. In 1963, at the time the agreement was given its first 5-year extension at a supplementary price of $100 million, it was argued with some plausibility that the American presence was helping open Spain to the winds of progress. The Spanish economy was blossoming under the stimulus of American dollars; the Spanish political structure was seemingly loosening somewhat. But in 1969, we are negotiating with a Government which has recently taken a giant step backward. Further extension of the defense agreement, involving substantial additional military assistance to the Franco regime, would constitute an American seal of approval for political retrogression and a severe blow to those who still hope to sway the Government in Madrid from its renewed enthusiasm for dictatorial rule.

We have, then, a proposal to renew a defense agreement which gives us bases of marginal military value and bears a heavy political cost. What about the economic cost? The direct price for the past 5 years was $100 million in military as-

sistance. Spain refused a similar offer when it called for new negotiations last year, and asked instead for an initial $1 billion and a subsequent "rock bottom" $700 million in military aid. The 5-year American counter offer, according to press reports, came to $240 million. To this, of course, must be added the operating and maintenance costs of the bases themselves, with their 25,000 American servicemen and dependents.

It is, of course, clear that we can afford the cost of our Spanish bases if they are really necessary to our national security. But with the military and political value so questionable, the cost seems badly out of proportion to the anticipated return.

This brings us, Mr. Speaker, to the key question which I believe underlies our entire discussion today. Are we dealing here with a carefully defined national security policy, and deciding whether this particular defense agreement complements or detracts from that policy? Or are we seeking to define national security policy so that it can encompass this defense agreement because our military planners want to keep this pact alive?

Incidentally, the role of the military in this particular case is a strange one. My colleagues will recall the story, first reported in Newsday by Flora Lewis late in February, of the free-wheeling negotiations conducted in Madrid last December by Maj. Gen. David A. Burchinal. The general, evidently acting well beyond his instructions, came up with new justifications for the Spanish bases—but only by accepting a major potential extension of American commitments abroad. He agreed with his Spanish opposite numbers, for example, Spain was an "integral part" of Western Europe and therefore within the U.S. defense umbrella. He also accepted their view that we might face a joint threat with Spain as a result of developments in North Africa. As the distinguished majority leader of the Senate (Mr. MANSFIELD) pointedly remarked at the time, the report of General Burchinal's activities "raises serious questions as to who shall conduct the foreign policy of the United States, be it the Pentagon or, as the Constitution states, the State Department under the direction of the President."

This bizarre episode, however, is only a parenthetical note to the overall problem. For this kind of blatant military intrusion into the negotiating process will, almost inevitably, be found out and overcome. Of far greater concern to me, and with far greater impact on the future course of this Nation, is the basic question we must consider: are we to have a rational process for deciding our national priorities, in which the military case receives appropriate but not prequestion we must consider: Are we to be swept irresistibly along on a tide of "national security" expenditures while other urgent needs remain unmet?

This broader debate is swirling all around us. It is evident in the argument now raging over deployment of an ABM system. It is a major factor in consideration of the bill introduced recently in both Houses to undertake planning for post-Vietnam economic conversion. It is manifest in the widespread popular outcry against our continuing inattention to a host of pressing national problems, all too often excused on the ground that national security demands leave insufficient resources for these other purposes.

Thus, Mr. Speaker, I believe we must look at this challenge to the Spanish defense agreement in the context of the debate now underway all across the country on the critical question of establishing national priorities and allocating national resources. The ABM has been called a defense in search of a mission. So the Spanish bases might be called installations in search of a justification. Just because the Defense Department, as the Washington Post said, "never voluntarily gives up its turf" is no reason for a major element of American policy to be seriously distorted to fit the Pentagon's preconceived pattern.

We must break the bad habit we have fallen into since World War II of accepting without serious question the claims advanced by the military for a share in national resources. They have for too long come to accept their 10 percent of the gross national product as their due. They have for too long gotten bases, with or without accompanying security commitments, wherever their fancies turned. I believe the proposed renewal of the defense agreement with Spain is a perfect place to draw the line. The return accruing to the United States from this pact is marginal at best in the military sphere and strongly negative in the political sphere, and the costs are out of all proportion to any benefits. Adding these solid specific arguments to our broad interest in seeing national priorities more rationally defined, there is little remaining case for renewal of the agreement.

I therefore join with my able colleague from New York (Mr. LOWENSTEIN), and with other Members who are speaking here this afternoon, in urging the administration to let this defense agreement die the quiet death it so richly deserves.

Mr. LOWENSTEIN. Mr. Speaker, I thank my distinguished colleague. In this light, Mr. Speaker, one must agree with him that the nature of the negotiations and the new rationale given for the continuation of the bases, has done little to increase the national confidence in the wisdom of American oversea commitments being negotiated primarily by military officials.

I include at this point the remarkable February 25 column by Miss Flora Lewis, of Newsday, Inc. Her accuracy and insights were so sustained that to date there has been no persuasive rebuttal to her rather disquieting revelations.

STATE, PENTAGON SPLIT ON COMMITMENTS TO SPAIN

(By Flora Lewis)

A secret dispute has developed between the State Department and the Joint Chiefs of Staff over American commitments to Franco Spain. At one point, the military almost made a U.S. pledge to fight for Spain as though it were a NATO country.

The Senate Foreign Relations Committee, which is starting to study how the U.S. gets into military obligation abroad, got wind of the blow-up between the State Department and the Pentagon at its peak. A committee staff member inquired and was told by both sides that there was no disagreement, no trouble. The executive departments are not inviting the Senators into their quarrel.

But the trouble has been brewing for months. The issue is now on its way to the National Security Council and will have to be decided by President Nixon. The story is a new case history of how the U.S. can stumble into a foreign war.

The immediate issue is the two air bases and the submarine base which the U.S. has in Spain. Although American officials disagree on their precise value, there is general agreement that none is essential to national security though all are useful.

The base agreement runs out this year. It provides that unless Madrid and Washington agree on renewal terms by March 26, the U.S. must evacuate within one year.

Talks on renewal went on during much of 1968. But last September, the Spaniards broke off negotiations, saying the gap between their price of $700 million in new weapons for another five years' use of the bases and the U.S. offer of $140 million in weapons and services was too big. If it was a bluff, it didn't work.

So in October, Spanish Foreign Minister Fernando Maria Castiella called on then Secretary of State Dean Rusk to launch a new approach. In place of the diplomatic talks, an American military mission was assigned to a three-stage discussion with the Spanish military, who dominate Spain. They were to assess the actual threat facing Spain, the "tasks and missions" the Spaniards must undertake to face it, and then the equipment needed to do the job.

Rusk's idea was that by tackling the subject in terms of needs rather than supplies, Madrid could be brought way down from its exorbitant demands for its three armed services.

Rusk also asked twice for a six-month extension of the March 26 deadline to give the new Administration time for this important policy decision. The Spaniards flatly refused

On Nov. 18–20, Gen. Earle G. Wheeler, Chairman of the Joint Chiefs of Staff, visited Madrid and opened the talks. He made a general speech about Western strategy and mentioned in passing "the potential problem of political instability in North Africa." And to head the mission he named Maj. Gen. David A. Burchinal, a tall dapper man who as deputy to NATO supreme commander Gen. Lyman Lemnitzer has the dual role of second in command over all NATO forces in Europe and over all American forces in Europe.

Burchinal started work on Dec. 7. Two days later he signed a joint minute with the Spaniards on the threat they face. It included as a seirous element the threat of limited war in North Africa, mentioning such possibilities as Algerian aggression, a "proxy" war in the Spanish colonies backed by the Russians, and other highly unlikely developments. His signature to this vast expansion of Wheeler's remark implied that Spain was justified in seeking far more weapons than the U.S. wants to give.

While he worked, he kept his papers locked in a safe at the U.S. air base at Torrejon, which is under his command. Neither the U.S. Embassy in Madrid nor the regular U.S. military mission there was given any word on conduct of the talks, nor could they possibly get access to the papers that were taken each night from Madrid to Torrejon.

Burchinal sent his copy of the signed minute back to Wheeler. It was not shown to the State Department nor to Pentagon civilians. After two weeks, with the intervention of top Pentagon civilians, the paper was finally produced.

The civilians, at the Pentagon and especially at State, were distressed with it. The

extended reference to a threat from North Africa could be used to involve the U.S. in a Spanish colonial war. They wanted the text changed. Burchinal refused on the grounds that it was already signed and that trying to get a redraft would ruin his negotiations.

So State and the Pentagon compromised. They agreed on the text of a "prefatory note" which was sent to Burchinal to be inserted in the next joint minute on "tasks and missions." The note said the talks were a useful exchange of views but that nothing in the first or future minutes could be considered a binding Spanish-American understanding or commitment.

They also agreed on a proposed minute for the second stage and sent it to Burchinal to negotiate. It eliminated the whole passage about North Africa. There was no report from Burchinal for over a month. Then, in early February, he returned the jointly signed minute with a deadline of 48 hours for approval. The Joint Chiefs demanded State's endorsement.

The State Department people exploded. Burchinal had made three crucial changes:

1. The "threat from North Africa" idea was reinserted.

2. A statement was inserted saying the U.S. was obligated to defend Western Europe "of which Spain is an integral part." State Department lawyers pointed out that this could extend the NATO guarantee to include Spain, a vast and probably illegal commitment without Senate ratification.

3. The "prefatory note" was changed. It said that the minutes were "agreed views" of the two military sides and "must constitute" the basis for further talks on arms for Spain, though it still contained the phrase that this was not a commitment.

Furthermore, State was incensed at the impertinence of the 48-hour deadline and refused approval. Secretary of Defense Melvin R. Laird intervened on the request of Pentagon staff. He got Secretary of State William P. Rogers, who was in Florida, to insist on speedy clearance of the paper.

An inter-departmental meeting was called. It was stormy. Reluctantly, State agreed to endorse Burchinal's minute provided two changes were made. The fateful "integral part of Europe" phrase was removed and a sentence was added to the "prefatory note" saying the talks "do not necessarily reflect the views of the two governments."

The whole issue was then sent, as case No. 1, to the new Inter-Departmental Group for Europe set up under the Nixon Administration's machinery for funneling policy decisions to the National Security Council. Assistant Secretary of State John Leddy is chairman of the group. Its report went into the broad dangers of any security commitment to troubled Spain, whether the U.S. really needs the bases and how high a price it should pay for them in terms of both money and future policy risks.

The Spaniards have repeatedly made vague threats that they might turn neutral if there is no new base agreement. Some American officers argue that Madrid might settle for fewer weapons if it could get a mutual security treaty with the U.S. American diplomats are convinced this would be an outrageously false economy.

At the least it would open the U.S. to serious charges from anti-Franco Spaniards that it deliberately supported his dictatorship, as Cuban moderates who initially supported Castro charged about Batista. At the worst, it could impel the U.S. into an unwanted war.

Mr. Speaker, if the United States is indeed to follow the prescription of President Nixon during and after the campaign, to decrease our policing commitments around the world, would not Spain be a salutary place to begin?

Is it really in the interest of the United States to go on propping up forever so dubious a government against so dubious a possibility as a hypothetical invasion by Algerians or from Ifni and the South Sahara?

Mr. HALPERN. Mr. Speaker, will the gentleman yield?

Mr. LOWENSTEIN. I yield to the gentleman.

Mr. HALPERN. Mr. Speaker, with the deadline near for renewal of the agreement covering American military bases in Spain, I wish to join my colleagues, and particularly commend the able gentleman from New York (Mr. LOWENSTEIN) in focusing attention on a number of significant issues involved in this agreement.

The American public deserves to have its Government examine with a much more discriminating eye this relationship which reveals so many questionable aspects of our foreign policy:

Is there a significant military necessity for American bases in Spain when even the Defense Department agrees their security value appears minimal?

Is American diplomacy to be carried out by American generals with a restricted view of the political consequences of their actions?

Is the tremendous financial commitment to Spain over the past years justified by the minimal value of these bases?

Should we allow ourselves to become involved in the internal politics of another country by giving aid to an undemocratic, a totalitarian regime?

Should the executive be allowed to make such consequential commitments by executive agreement without benefit of congressional review?

However, I would like today to briefly elaborate on one particularly important question in addition to those I have stated, which is raised by our support of the Franco dictatorship which only recently again reverted to the repressive policies of a police state.

The issue is not a new one, but it never suffers from reiteration because it is so important in disclosing a chronic flow in our foreign policy. How often must we earn the enmity of the large majority of the peoples of foreign lands by materially supporting the oppressive governments that they abhor? Why must we lose sight of the idealism we cherish so dearly?

That Franco's government has nothing in common with American ideals of democratic government hardly bears explanation, but recent facts make the conclusion even more apparent. Although a new era of moderation was supposed to have been effected over the past 5 or 6 years, on January 24 of this year Franco established a "state of exception," suspending numerous civil liberties, in response to student unrest and some simple declarations by intellectuals of desires for more freedom.

The emergency action established nothing less than a severe police state.

Hundreds of arrests were made—Spain admits to 260—and thousands of detentions were imposed without warrants.

Police were given authority to make searches at any place or time.

At least 17 intellectuals and university professors were forced into exile.

The Spanish press was severly censored. Even as the "state of exception" is being lifted, Franco's government has made it clear that it will retain power to suspend publications or fine editors who are too politically outspoken.

Indeed, the recent announcement of the lifting of emergency measures would seem to be deliberately aimed at softening criticism at this delicate point in negotiations. But the meaning of this gesture is certainly little more than illusory. When the need to cultivate American opinion is passed, the experience of this dictator has shown he will have no hesitancy in restoring his repressive measures at his whim so let us not be fooled by this superficial act of the so-called lifting of restrictions. The period of moderation that existed earlier was dispensed with as soon as the "strong man" felt the slightest threat to his omnipotent power.

In addition to the serious moral reservations the American Government should feel in dealing with this regime, due consideration should be given to the effect our support produces on the minds of the dissatisfied Spaniards. More and more America is being equated in the thoughts of millions of Spaniards with the hated regime.

The people of Spain want a change from the old ways of the "caudillo." Numerous widespread elements of the Spanish public have shown their impatience with the strong-arm tactics. Before the emergency, state students had called for academic reform; lawyers from Madrid College asked the government to shelve proposed repressive legislation; 1,300 prominent Spaniards called on the government to investigate alleged police torture practices; even the younger Catholic clergy had made some outspoken protests.

That American money and military aid should be going to Franco at precisely the time when so many of his own people have launched their heaviest criticism upon him is a course that is at once ironic and unwise. Despite explanatory speeches and the like, few Spaniards would fail to regard the concluding agreement as placing the weight of Washington behind the generals of Madrid.

In short, there is little to recommend this compact. It is not favorable to any American economic or political interests and where the needs of American security are so questionable, should the United States be aiding a foreign regime which controverts the ideals of democratic government and is opposed by its very own people. It is both the right and the responsibility of the American Government to take an objective look, unclouded by the limited views of its military advisers, at the whole question.

Mr. LOWENSTEIN. I wish to thank the distinguished gentleman from New York. And, finally, Mr. Speaker, I must ask what hidden benefits there are for the United States in expensive alliances with repressive governments in their declining periods. Do we really need to finance rotten little dictatorships resented by their own people and rejected

by the decent opinion of mankind? Do we need a Greek junta so badly that we must finance and equip one?

I have spent a good deal of time in Spain over the years. There will, thank God, be a Spain when there is no longer a Francisco Franco. And one day the Spanish people, who—like many other peoples but more heroically than most—fought for their freedom against Hitler and Mussolini, will live in freedom again.

But meanwhile, what are we doing to America in the eyes of Spain. And what are we doing to Spain in the name of America.

The guns and planes with which we pay rent for our bases in Spain have been used and will be used not to fight Russians or Chinese, but to frighten Spaniards. Where do the armored personnel carriers, the machineguns, the ammunition, the helicopters—paid for by Americans and given to the Spanish Army—where do they go? What do they do? What are they for?

About these matters, Mr. Speaker, I am especially grateful for the remarks of the distinguished gentleman from New York (Mr. HALPERN).

And I want to call to the attention of the House the comments of the Abbot of Montserrat, one of the great figures of the Roman Catholic Church, who said in 1963:

> We have behind us not twenty-five years of peace, but twenty-five years of victory. The victors . . . have done nothing to put an end to this division between victors and vanquished. Therein lies one of the most lamentable failures of a regime which calls itself Christian, but whose state does not obey the basic principle of Christianity.
>
> The people should be able to choose their own form of government and should be able to alter it.
>
> The government has no right to abuse its power. It should be an administrator in the name of God and a servant of the people.
>
> I have been very much interested, and continue to be interested, in the political prisoners, whose existence constitutes one of the most painful aspects of the regime. Their presence in the prisons is in direct relation to the peace which the state has not succeeded in restoring.

I have been in Spain again recently, Mr. Speaker, and whatever the Spanish Government now says to ease the resentment against it here and elsewhere on the eve of these negotiations, the unhappy fact remains that the finest democrats of that sad land are once again in hiding, in jail, in terror, in remote villages for undisclosed crimes, for undefined periods of time.

There must be a better use for the money extracted from the people of this Nation than to add to the burdens of a friendly people who have done us no harm and who crave only freedom and justice for themselves.

(Mr. LOWENSTEIN asked and was given permission to revise and extend his remarks and include extraneous matter.)

Mr. LEGGETT. Mr. Speaker, will the gentleman yield?

Mr. LOWENSTEIN. I yield to the gentleman from California.

Mr. LEGGETT. Before the gentleman concludes I want to compliment the gentleman on his remarks here today. I did not hear everything the gentleman had to say, but certainly it is my own view that there is some need to maintain some military capability in the Mediterranean.

I believe that the Rota Base, which our Navy uses out there, is perhaps critical for some of our deployments there. I believe there are, however, a considerable number of other surplus military installations which we still currently have on lease with the Spanish Government, and with respect to those surplus capabilities I would certainly point out they are pertinent to the nature of the gentleman's remarks.

Mr. LOWENSTEIN. I appreciate the gentleman's comments.

Mr. LEGGETT. Mr. Speaker, I wish to commend Mr. LOWENSTEIN on his fine presentation of the facts and major problems at issue in the negotiations on U.S. military aid and installations in Spain.

It is becoming increasingly clear that events such as the Spanish negotiations are symptomatic of a far deeper problem confronting U.S. foreign policy. This problem is the military determination of U.S. foreign policy. The problem takes on two dimensions. The first is that many of our advanced and extremely costly weapons systems are so far reaching in their capabilities and missions that the systems are in effect determining the foreign policy. This would seem to be the ultimate in the often feared technological takeover of our society. In the past we have always assumed that our policy would be determined by men—hopefully, the President with consultation from the Department of State. Now however, it seems that we are reaching the era where the weapons systems promoted by the military are rushed through Congress, and a foreign policy is then structured around the capabilities of the system. Not only does this directly threaten the long held concept of civilian control of the military, but goes a step further, and threatens to have the computers and systems analysts control the civilians.

The second symptom is present in the Spanish incident. In this case the military—Major General Burchinal to be exact—has negotiated far-reaching commitments with the Spanish authorities. These negotiations go far beyond technical military aid requirements and reach directly into the province of our overall commitments to the Spanish Government, including discussions on possible U.S. involvement in Vietnam-type actions which the Spanish fear may erupt in their spheres of influence in Africa. I would think we had learned a lesson by now from our Vietnam experience. It seems we have not. The military is still determined to involve the United States in a perennial position of police force to the world. These discussions were carried on by the Army without the consultation of the Department of State and from all indications against the judgment of the Department of State.

We must put a stop to the Pentagon bulldozer. Just yesterday Senator MANSFIELD charged that the officials of the Department of Defense in the Senate Foreign Relations Committee and Armed Services Committee hearings had gone beyond the outline of the safeguard ABM system presented by President Nixon. The DOD is determined to have its way with these systems, and I predict that by the time they are through, the ABM system that is deployed will be far heavier than the one originally proposed. This has happened time and time again. The systems get bigger and more expensive and no effective controls are placed on their development.

This blatant example of diplomatic negotiation by the military in Spain is symptomatic of the dangerous problem facing us.

We must once and for all decide who is in charge here. Is the military the arm of the civilian authority, or are the civilians merely the conduit for funds to the military?

Mr. MONAGAN. Mr. Speaker, will the gentleman yield?

Mr. LOWENSTEIN. I yield to the gentleman from Connecticut.

Mr. MONAGAN. I heard one statement the gentleman made to which I should like to take exception. The gentleman has said that no evidence has been offered as to need for these bases.

I would concede that the character of the need has changed. The technology of defense, if we want to call it that, has changed, and to some degree we have passed from the bombers which were used when the bases were originally instituted to the use of submarines and also of missiles.

But I believe it is very important to look back at the history of the use of these bases and to realize they have proved to be of vital importance in many respects and I cite their use in relation to the Congo and in relation to the recent war in the Middle East.

As a Member of the Committee on Foreign Affairs, I have heard no one—in the military, or in Defense, or State—say that they are not important. To the contrary, they have said they are very important.

While the importance has changed in quality and perhaps to some degree otherwise, nevertheless they still have a very vital importance for us in the Mediterranean and in relation to these other areas of which I have already spoken.

Mr. LOWENSTEIN. I was wondering whether that importance would be in connection with the accessibility of these areas to Spain? I believe it is important, if that would be the inference, to consider some of the mileages involved.

Mr. MONAGAN. It is not to the areas of Spain, but it is our use of these bases in relation to other areas in the world, such as the Middle East. I mentioned the Congo. Biafra might be a conceivable area. Although it is not big enough to require any great mercy airlift, which is what I am thinking of. With the base of Wheelus in Libya being of questionable availability, with the bases in Turkey being in some doubt, with the increased activity of the U.S.S.R. as to its fleet in the eastern Mediterranean, and its activities in the Red Sea area, its penetration of the United Arab Republic, I believe that this is practically the only remaining base available to us outside of the Azores which is on a de facto basis, means it assumes a greater significance.

Mr. LOWENSTEIN. The mileage from Madrid to the Suez Canal is 2,100 miles and the distance from Wiesbaden to the same place is 1,800 miles. In terms of critical areas the mileage from Madrid to the Bosporus is 1,650; from Wiesbaden it is 1,150; submit that, while it may be convenient to have additional bases, these bases are neither more accessible nor more convenient than the bases we already have.

Mr. MONAGAN. Of course, Wiesbaden is not a base of this character. I have visited all of these bases. It is not the same type of base at all in size or capacity or anything else. We are not increasing the number of bases. Actually the fact is that we are decreasing them. I mentioned Wheelus and the Turkish bases, as examples. So it is not a question of increasing their number, but we are actually decreasing them.

Mr. LOWENSTEIN. I find it difficult to understand what purpose it serves to involve ourselves in this considerable additional expenditure, or to commit ourselves to the particular government that runs Spain, simply for the decreasing convenience that you suggest.

Mr. MONAGAN. We do not know what the expenditure will be. Actually, talks are in process at the present time and no agreement has been reached. In the past in similar bargaining we have seen the figures go down from something like $1 billion to a matter of several hundred million. I am sure that will happen in this case. However, I do not agree and would not want my own support of the military necessity to be read as any support of the Franco regime. Nor do the people who are negotiating on our part consider a military agreement to constitute political approval. On the other hand, we should not sacrifice our security interests because a cooperative regime does not conform in all ways to our prescription. So I think that is clearly not a point as far as this matter is concerned.

Mr. LOWENSTEIN. I wonder if the gentleman would suggest what reasonable limit we should pay, in view of the cost to the taxpayer, for the use of these additional bases which, you suggest, may have been essential years ago but now may be a matter of convenience.

Mr. MONAGAN. No. I do not say they are merely a matter of convenience. I say they are a matter of great importance. What the amount of the rental should be involves a great many things. I do not have those figures at hand. But it seems to me that there was a time when it was a matter of $100 million or something like that. However, I would not want to be held down to amounts. On the other hand, I point out that purchases have been made in this country by Spain that have exceeded the amounts we have paid for the rental rights.

Mr. LOWENSTEIN. The trouble is that when they purchase $50 million in military equipment, we give them a like amount of $50 million, which in effect means that we are giving the Spanish Government a sort of matching grant, a grant-in-aid which means they get American military equipment at half the price we pay to supply our own troops in Vietnam. I confess that I am troubled by a concept of U.S. military security that involves making available to Spain military equipment at half the price that we have to pay for it ourselves.

Mr. MONAGAN. As far as I know, it is paid for at regular prices and the purchase has been in excess of the amounts that we have paid in for the bases.

It has been used as I understand it for the modernization of the equipment of the Spanish Armed Forces.

Mr. LOWENSTEIN. If I may pursue the point a bit further, the official figures are that to date we have expended almost $700 million in military assistance to Spain, exclusive of these military matching grants and of economic aid. I agree with the gentleman from Connecticut that we would be wasting our time to argue the history of the matter at this point. But I would hope we could agree that in view of our immense national debt and tax burdens, of our other defense needs, of our varied commitments around the world, and of our innumerable other obligations, we should set up a scale of priorities. I believe it is incumbent upon the Members of the House of Representatives to consider this question of priorities, and to consider in that context whether we really ought to continue this operation in Spain. In my opinion it would be unwise to consider just the immediate price tag when there is so much involved here.

Mr. MONAGAN. Mr. Speaker, if the gentleman will yield further, I fully agree with the gentleman. I myself have filed a bill to set up a commission to determine priorities in the allocation of our national assets. I think the gentleman from New York and I might differ as to the importance of this particular project in relation to our overall defense. When we get down to that point, I think that is basically what we are arguing about here.

Mr. LOWENSTEIN. In that connection, might it not be a useful pursuit to determine whether, in view of the limited resources of the United States, its pressing other needs, its overwhelming tax burden, and its rising national debt, it makes sense to continue this program in Spain. Is it desirable to further extend these leases without a full national discussion of the facts and of all the questions that you and I are discussing now?

Mr. MONAGAN. Mr. Speaker, if the gentleman will yield further, I am in favor of public discussion. One of the reasons I rose to raise these points is because I think it should be discussed and we are discussing it. I do think that the gentleman from New York has done a service in bringing his point of view before the House. Mine differs somewhat and, therefore, I want to bring out the points that I think are important in this matter. Certainly, this matter of military spending does involve the consideration of an allocation of priorities. I would be the first one to admit that there are many areas where I think we could cut back. Even the Secretary of Defense has recommended a reduction in military spending. So it then becomes a matter of one's judgment as to what is best for the welfare of the country.

Mr. LOWENSTEIN. I am deeply grateful to the gentleman for taking part in this discussion. I hope, however, we have only begun the discussion today. I think it would be unfortunate for the United States, in view of the significance of this decision and the many other things involved, to act on the question of whether to extend the bases in Spain as if there were no further implications and costs.

I think on the matter of the national security that the viewpoint of Senator SYMINGTON and others who have been intimately involved with security problems for years, and who are deeply concerned about the effect of our overseas base policies and commitments on our national situation that that testimony might wisely be considered along with yours and mine.

Mr. MONAGAN. Mr. Speaker, if the gentleman will yield for just one more point, I read the views of Senator SYMINGTON and I think that one must consider statements that are made at the present time in connection with negotiations that are going on. Sometimes a lawyer in a case where a settlement is about to be made might puff his case or belittle the opponent's case. I think that, perhaps, is the case here.

I thank the gentleman for yielding.

Mr. TAFT. Mr. Speaker, will the gentleman yield?

Mr. LOWENSTEIN. I am happy to yield to the gentleman from Ohio.

Mr. TAFT. Mr. Speaker, I thank the gentleman for yielding.

First of all, Mr. Speaker, I believe the gentleman from New York is to be very much commended for bringing this matter to the floor for discussion. I would like to say further that I find myself somewhat in disagreement with the views expressed by the gentleman from New York, and more in conformity with the views of the gentleman from Connecticut (Mr. MONAGAN) as to at least the reservations that the gentleman from Connecticut (Mr. MONAGAN) has just expressed.

Be that as it may, however, the reason for asking the gentleman to yield is because, along with the gentleman from Connecticut, I serve on the Subcommittee on Europe of the Committee on Foreign Affairs. There have been some initial hearings on this subject in that subcommittee. However, I feel that I should call to the attention of the House that I believe that to the desk of every Member of the House, certainly to mine, there came a statement from the gentleman who is the chairman of the subcommittee.

In that statement there is certain language which is subject to the interpretation, and I am sure that it is not intended to be subject to that interpretation, but nevertheless is subject to the interpretation that the Subcommittee on Europe has acted upon this matter, and that the chairman has been authorized to speak for such committee. I want to make it clear that that is not the case. The subcommittee has not, as far as I know, taken any action in connection with this issue. I believe it is useful to

explore the issue. I believe, however, as the gentleman from Connecticut has already explained, that when one attempts to assess the economic and military problems, as well as the effect on our foreign affairs of these decisions, one is looking at a pretty broad scope, and to try to isolate one particular area and examine it without reference to the entire problem of defense is extremely difficult.

Mr. LOWENSTEIN. Mr. Speaker, I appreciate the contributions to this discussion made by the gentleman from Ohio. I quite share his concern that we consider the Spanish bases in a larger context—that, in fact, has been a major thrust of my remarks today. Unless we have the capacity in the United States to question whether or not it is in the interest of our country to continue this involvement and this expenditure, we have lost a very important part of our best traditions. Almost anything can be done in a cloak of secrecy if we assume that the incantation of the words "national security" precludes weighing military requests—and rejecting military requests that do not withstand careful scrutiny successfully. There would not be much left of the America we love if the people were denied the right of investigation and decision.

Thus it seems to me there is a very special responsibility for us to examine this matter with great diligence and great awareness of our overall national purposes and needs.

It does not serve simply to say that we need some military program or other because some general says so. Our generals may be highly motivated, but they have been known to be wrong nonetheless. This country is not dependent exclusively upon the views of generals in the determination of these matters. I suspect if it were we would not have done as well as we have. We would certainly not be what we are.

I hope therefore that others will want to proceed with this discussion after today, will want to urge upon the President and the Congress the importance of the continuation of such a discussion.

I hope today will help sound a tocsin for the necessity of such a discussion.

Mr. KASTENMEIER. Mr. Speaker, I join my distinguished colleagues today in raising serious questions as to the propriety of our renewal of our base agreement with the Franco regime. It seems to me that the Spaniards, whose foreign minister is now in Washington to consummate another 5-year executive agreement between our two Governments, have indeed struck a fine bargain—for Spain.

But has the national interest of the United States been well served? I think not. I believe it is important to view the agreements in a very basic sense. Is the U.S. Government which will have to furnish some $300 million additional in war material for the Spanish armed forces getting a good return for its money? The most ardent supporters of our continued commitment to Spain do not, and can not, claim that these bases are vital in any sense to our own security.

On the other hand, the pitfalls that could result from our continued intimate association with the dictatorial Spanish Government are too readily apparent. Should much needed social and political change finally come to Spain, on whose side shall we stand? How shall the United States as guardian and benefactor of the Ancien regime be judged by the new leadership and the Spanish people? If serious civil disturbances occur as they did on a milder scale 2 months ago, will not the pressures to intervene to protect the lives of our 15,000 servicemen and their dependents override other considerations? What of our costly installations there? Could we ever allow them to be taken over precipitously?

Mr. Speaker, the unmistakable fact that emerges is that our bases and our lavish military assistance are tying our own hands in identifying with the winds of change that must some day sweep over the Iberian Peninsula. What is surely not more than a matter of convenience today for our own military, could very well become a matter of urgency, or at the least, acute political embarrassment tomorrow.

The Defense Department's dubious role in the negotiations has fortunately already been brought to light. The arrogant unconcern for opposing viewpoints, the Byzantine secrecy, and the eagerness to commit our Government to the defense of Spain—under a set of highly unlikely circumstances, I must add—these all raise serious questions as to the proper role of our generals in making foreign policy for the United States. The Defense Department's undercutting of the authority and the responsibility of the Department of State in the base negotiations is but a single example of the increasingly preeminent role of our military in the formulation of vital political decisions affecting our country's future.

In the background of this sorry episode, we must not overlook the most severe suppression of dissent in Spain—the past 2 months under their "state of exception"—a form of rigid martial law. It is apparent to me that these draconian measures which have been conveniently lifted only yesterday, too conveniently coincide with the visit here of Foreign Minister Castiella. If anything, this cynical gesture shows a fine appreciation for public relations—particularly when the American public is involved, rather than the Spanish public.

Mr. Speaker, we must ask ourselves whether the renewal of the base agreement with Franco-Spain will encourage the liberalization that we have read about with grateful anticipation. I think not. Besides strengthening the hands of the Spanish military, the agreement gives substance to the menace of the Communist bogeyman supposedly threatening Spain, and against which the harshest measures are justified.

In sum, Mr. Speaker, a renewal of our base agreement with Spain offers aid and encouragement to the two parties whose narrow interests in this matter have unfortunately prevailed—the Franco regime, and our own Department of Defense.

April 1, 1969, will mark the thirtieth anniversary of the complete domination of Spanish life by Generalissimo Franco and his cohorts, and of the subjugation of a proud people whose culture has enriched our own hemisphere particularly. Mr. Speaker, is not the time ripe to rid ourselves of the tie to a most dismal period of Spanish history, and to commit ourselves to Spain's future?

Mr. EDWARDS of California. Mr. Speaker, the United States is being asked to pay $700 million in military aid to retain three Air Force and one submarine base in Spain for 5 years, a high price even in these days of inflated rents.

The Spanish people, and press, when allowed have made clear their unhappiness with the American military presence in Spain. The United States unfortunate experience in losing a hydrogen bomb off Paomares, Spain, in 1966 made even the Franco government unhappy. The bases have become an open sore to the Spanish workers and students, prohibiting good relations with them.

Further, the Spanish Government recently suspended many of the limited freedoms enjoyed by the Spanish people. For the United States to renew the leases, and pay $700 million in military aid for them, would be de facto endorsement of those limitations on basic freedoms.

The Christian Science Monitor has called the proposed payment "a bribe." Whether it is rent, or a bribe, the question arises whether these bases are needed, or whether they are now unnecessary real estate. The original agreement with Spain in 1953 came at a time when bases for relatively short range Air Force strategic bombers were needed. Today the United States is armed with intercontinental missiles, B–52 bombers and the Polaris submarine fleet—a fleet which can operate from the shores of the United States. What then is the need for the Spanish bases?

The security of the United States is not a question. The payment of a rent, or "bribe," for unnecessary bases is.

The present administration, which often has called for economy, can accomplish a $700 million economy at the stroke of a pen. As per our present agreements with the Spanish Government, the United States should notify Spain the bases are no longer required and will be evacuated within the specified year. The $700 million can be put to far better use.

Mr. COHELAN. Mr. Speaker, I would like to compliment my colleagues—Mr. LOWENSTEIN, Mr. ADAMS, Mr. HALPERN, Mr. MCCLOSKEY, and Mr. RYAN—for arranging this opportunity for the Members of the House to discuss the critical issues involved in the negotiations for the renewal of American base rights in Spain.

It seems to me altogether fitting on the eve of the expiration of our present agreements for these bases in Spain for the House of Representatives to address itself to the question whether it is wise to continue to operate those bases, and if so whether it is wise to expend hundreds of millions of dollars and new defense commitments to preserve that continued operation.

I would only hope that the administration would heed the concerns which motivate several of us to today question the wisdom of our continued military

presence in Spain at these high dollar and commitment costs.

It seems to me that the situation in Spain is not unique, but rather that it reflects circumstances in the making and operation of American foreign policy which can be, and indeed have been, duplicated in other parts of the world.

First. There is the tendency to hold on to foreign bases even after the facts justifying their original acquisition have ceased to exist.

Our bases in Spain were acquired at a time when they were thought essential to the maintenance of our nuclear deterrent. No one today claims these bases are still essential for this purpose. And so it is that one is led to question whether the continued use of these bases is worth the price we are being asked to pay—in money, in support of an unattractive regime, in the extension of further military commitments to defend still more nations in more circumstances.

I expect that the arguments we are now hearing with regard to bases in Spain, we will be hearing in the coming months with regard to bases in Japan, and in Korea, and in Turkey, and in other parts of the world. I suggest that we pay close attention to these arguments to retain these bases. In a good many cases I think we will find that the original justifications have expired, and that only jury-built reasons remain to support the request.

Second. I think we can discern in the Spanish situation a possible example of how it is that our military presence tends to expand into still further commitments and presence. Press accounts indicate that an American general negotiating on behalf of the U.S. Government may have offered to commit the United States to defend Spain in the same degree to which we are now obligated to defend NATO allies. This is, if true, a most ominous development.

Where afterall is the great threat to Spain at this moment? It would appear on casual analysis to be a threat from the people of Spain in opposition to the repressive regime of the present rulers of the country. Are the French or the Italians or the Russians or Chinese apt to attack Spain? And if they did, is it clear that the United States should in every case be obligated to come to Spain's defense?

I do not think the answers to these questions are so clear as to indicate that the United States should enter into such a defense commitment—and moreover, I do not believe there can be any justification for undertaking such a commitment so lightly and in such cavalier fashion.

Again, I think it may be that this extension of commitments by military authorities in the countries in question could be duplicated in Latin America or Southeast Asia. Again, too, I suggest to my colleagues that we listen closely to how this offer of new military undertakings came about—it may be very instructive in preventing a recurrence.

Third. I am concerned with the apparent fact that the Department of Defense and not the State Department or the President has been independently carrying on negotiations which vitally affect our foreign policy. Is it true that uniformed officers have taken great pains to conceal their activities from civilian scrutiny in the Department of State? If it is, I think it is a matter which should be of interest to us.

Is it true that after review in Washington by diplomats and defense experts our negotiators in the field agree to arrangements in opposition to the instructions from Washington? If so we should be interested.

Could it be that this behavior too could be duplicated elsewhere in American relations overseas?

Fourth. I wonder whether we are giving adequate attention to the impact of continued American military assistance to the Franco regime on the attitudes of the Spanish people and of our friends and enemies throughout the world. I think it is fair to say that the present Spanish regime is antithetical to most American values and ideals. This Government has in recent months moved to an even more repressive posture than that which has marked its past reign. Military assistance provides the funds to operate, equip and maintain an army to enforce this repression should it be challenged by force. This overwhelming military strength in turn allows the present regime to refuse to accede to the desires of its people for increased liberty. Is this the sort of policy for which precious American resources should be spent?

Fifth. I come finally to the large monetary costs of our continued operation of these Spanish bases.

The American civilians and servicemen assigned to these bases consume millions of dollars in foreign exchange each year—years in which balance-of-payments difficulties have caused us to restrict American investments abroad, and to maintain artificially high interest rates. Are these Spanish bases and the convenience they provide worth the foreign exchange costs? Would American businessmen rather see American foreign exchange spent to maintain these facilities in Spain, or would they prefer to increase their freedom to invest overseas?

Would American consumers rather pay lower prices due to the elimination of "voluntary" limits on imports caused by foreign exchange shortages, or would they prefer to maintain these bases in Spain?

In terms of foreign assistance the costs are high, too. As a member of the Appropriations Subcommittee charged with oversight of the foreign assistance program I can testify to the scarcity of resources available for expenditure in support of foreign countries. Would the American people rather spend their limited foreign aid resources on payoffs to the Spanish for these bases, or would they rather meet the problems of starvation in Nigeria/Biafra, or the problems of overpopulation in India, or the general problems of economic development in Asia, Africa, and Latin America?

And then, too, would those who live in America and need food, and housing, and job training, would they rather spend American resources for the convenience of these Spanish bases, or would they rather save the money for expenditure at home?

In sum, Mr. Speaker, I believe that very grave questions are raised by our continued operation of these Spanish bases.

Are the reasons for the maintenance of these bases outdated?

Is the military expanding our commitments to defend still more countries in still more circumstances?

Is the Defense Department and not the State Department and the President making our foreign policy?

Is the United States wise in continuing to support a regime antithetical to the American way of life?

Are the costs of these bases so vital that Americans should be willing to restrict their foreign investments and foreign assistance to preserve their operation?

These I submit, Mr. Speaker, are questions which should and must be answered before we proceed to pledge away the future lives and resources of this country. Until they are answered to my satisfaction I have strong reservations about renewal of our Spanish operations.

For the sake of informing those who read the RECORD, I would like to include at this point an editorial from the Washington Post and an article by Flora Lewis which deal with the questions I have raised today:

[From the Washington Post, Mar. 17, 1969]

THE SPANISH BASES

This week Spanish Foreign Minister Fernando Castiello Maiz arrives in Washington to conduct the final round of negotiations for the continued American occupancy of four bases in Spain, whose lease expires March 26. These bases—three Air Force, one Navy—have quite a history. They were established in 1953, in the most frigid years of the Cold War as part of the defense system that ringed the Soviet Union, from Spain and Morocco to Turkey. In return for the leased land, the United States pumped $1.2 billion in economic and military assistance into Spain over the next ten years. In 1963 the lease was renewed for five years in return for $100 million in military aid. Last summer the Spanish came back with a demand for $1 billion for the next five years, a sum that was later scaled down to $700 million in military aid. There were other Spanish demands as well, among them a commitment that the United States come to Spain's defense in case of attack—presumably, and incredibly, from North Africa. The American Government's position on all this has been far from clear, in part because the Johnson Administration apparently authorized a major general to do its diplomatic business in Spain, and it is not at all certain that his views coincide with the Government's. The notion now is that the United States will settle for a five-year extension at $100 million.

It is an astonishing business. No one, not even the Air Force, contends that the three air bases in Spain—in this, the age of the ICBM—are essential to American defense. "Desirable" is about the strongest word one can in good conscience extract, and that largely on the basis that the Department of Defense, the bureaucratic proof of the validity of the territorial imperative, never voluntarily gives up its turf, in this case three air bases. The naval base, useful for the servicing

of Polaris submarines, is not essential either; it is marginally less expensive to service the subs in Rota, rather than the Eastern United States, and that is about all. So there is little in the way of persuasive military argument for retention of the bases and the 10,000 men who man them, particularly at a $700 million price tag.

The objections to extension of the lease however, go way beyond $100 million or $1 billion and four obsolete and obsolescent bases. It is that the money in military aid will go to the Franco regime at precisely the time when it is under heaviest fire from its critics—left, right and center, from anarchist to monarchist—for reinstating the repression so characteristic of "the system" in the years immediately following the civil war. To conclude this agreement now would be to place the weight of Washington behind the generals in Madrid, no matter how many explanatory speeches, statements and backgrounders came from the White House. Beyond that, and not very far beyond it, is the inadvertent stake we acquire in a country once we establish bases and staff them with American soldiers. Diplomacy follows the flag. Who rules in Madrid becomes important not for political reasons but for military ones: What will they do to the bases? It would be interesting to know how the Administration is sorting out these questions. Which comes first: politics or military security, in this case—by most of the evidence—a dubious military security.

In short, this agreement appears to have very little to recommend it. It does not appear to be favorable to American interests on any grounds, military, political or economic, and in fact would tend to bring this country into disrepute with exactly those elements, in Spain and out of it, who should be our allies. A persuasive case for renewal of the leases has yet to be made.

[From the Los Angeles Times, Feb. 27, 1969]

PENTAGON'S SPANISH BASES "DIPLOMACY" TRIGGERS FEUD

(By Flora Lewis)

A secret dispute has developed between the State Department and the Joint Chiefs of Staff over American commitments to Franco Spain. At one point, the military almost made a U.S. pledge to fight for Spain as though it were a NATO country.

The Senate Foreign Relations committee, which is starting to study how the U.S. gets into military obligations abroad, got wind of the blow-up between the State Department and the Pentagon at its peak. A committee staff member inquired and was told by both sides that there was no disagreement, no trouble. The executive departments are not inviting the senators into their quarrel.

But the trouble has been brewing for months. The issue is now on its way to the National Security Council and will have to be decided by President Nixon. The story is a new case history of how the United States can stumble into a foreign war.

The immediate issue is the two air bases and the submarine base which the United States has in Spain. Although American officials disagree on their precise value, there is general agreement that none is essential to national security though all are useful.

The base agreement runs out this year. It provides that unless Madrid and Washington agree on renewal terms by March 26, the United States must evacuate within one year.

Talks on renewal went on during much of 1968. But last September, the Spaniards broke off negotiations saying the gap between their price of $700 million in new weapons for another five years' use of the bases and the U.S. offer of $140 million in weapons and services was too big. If it was a bluff, it didn't work.

So in October, Spanish Foreign Minister Fernando Maria Castiella called on then Secretary of State Dean Rusk to launch a new approach. In place of the diplomatic talks, an American military mission was assigned to a three-stage discussion with the Spanish military, who dominate Spain. They were to assess the actual threat facing Spain, the "tasks and missions" the Spaniards must undertake to face it, and then the equipment needed to do the job.

Rusk's idea was that by tackling the subject in terms of needs rather than supplies, Madrid could be brought way down from its exorbitant demands for its three armed services.

Rusk also asked, twice, for a six-month extension of the March 26 deadline to give the new Administration time for this important policy decision. The Spaniards flatly refused.

On Nov. 18–20, Gen. Earle G. Wheeler, chairman of the Joint Chiefs of Staff, visited Madrid and opened the talks. He made a general speech about western strategy and mentioned in passing "the potential problem of political instability in North Africa." And to head the mission he named Maj. Gen. David A. Burchinal, a tall, dapper man who as deputy to NATO chief Gen. Lyman Lemnitzer has the dual role of second in command over all NATO forces in Europe and over all American forces in Europe.

Burchinal started work on Dec. 7. Two days later he signed a joint minute with the Spaniards on the threat they face. It included as a serious element the threat of limited war in North Africa, mentioning such possibilities as Algerian aggression, a "proxy" war in the Spanish colonies backed by the Russians, and other highly unlikely developments. His signature to this vast expansion of Wheeler's remark implied that Spain was justified in seeking far more weapons than the United States wants to give.

While he worked, he kept his papers locked in a safe at the U.S. air base at Torrejon, which is under his command. Neither the U.S. Embassy in Madrid nor the regular U.S. military mission there was given any word on conduct of the talks, nor could they possibly get access to the papers, which were taken each night from Madrid to Torrejon.

Burchinal sent his copy of the signed minute back to Wheeler. It was not shown to the State Department nor to Pentagon civilians. After two weeks, with the intervention of top Pentagon civilians, the paper was finally produced.

The civilians, at the Pentagon and especially at State, were distressed with it. The extended reference to a threat from North Africa could be used to involve the United States in a Spanish colonial war. They wanted the text changed. Burchinal refused on the grounds that it was already signed and that trying to get a redraft would ruin his negotiations.

So State and the Pentagon compromised. They agreed on the text of a "prefatory note" which was sent to Burchinal to be inserted in the next joint minute on "tasks and missions." The note said the talks were a useful exchange of views but that nothing in the first or future minutes could be considered a binding Spanish-American understanding or commitment.

They also agreed on a proposed minute for the second stage and sent it to Burchinal to negotiate. It eliminated the whole passage about North Africa. There was no report from Burchinal for over a month. Then, in early February, he returned the jointly signed second minute with a deadline of 48 hours for approval. The Joint Chiefs demanded State's endorsement.

The State Department people exploded. Burchinal had made three crucial changes:

1—The "threat from North Africa" idea was reinserted.

2—A statement was inserted saying the United States was obligated to defend western Europe "of which Spain is an integral part." State Department lawyers pointed out this could extend the NATO guarantee to include Spain, a vast and probably illegal commitment without Senate ratification. It could be used to drag the United States into a second Spanish civil war if Madrid held that possible rebels were acting for Moscow.

3—The "prefatory note" was changed. It said that the minutes were "agreed views" of the two military sides and "must constitute" the basis for further talks on arms for Spain, though it still contained the phrase that this was not a commitment.

Furthermore, State was incensed at the impertinence of the 48-hour deadline and refused approval. Secretary of Defense Mel Laird intervened on the request of Pentagon staff. He got Secretary of State Bill Rogers, who was in Florida, to insist on speedy clearance of the paper.

An interdepartmental meeting was called. It was stormy. Reluctantly, State agreed to endorse Burchinal's minute providing two changes were made. The fateful "integral part of Europe" phrase was removed and a sentence was added to the "prefatory note" saying the talks "do not necessarily reflect the views of the two governments."

The whole issue was then sent, as case number one, to the new intergovernmental committee for Europe set up under the Nixon Administration's machinery for funneling policy decisions to the National Security Council. Assistant Secretary of State John Leddy is chairman of the committee. Its report went into the broad dangers of any security commitment to troubled Spain, whether the United States really needs the bases and how high a price it should pay for them in terms of both money and future policy risks.

The Spaniards have repeatedly made vague threats that they might turn neutral if there is no new base agreement. Some American officers argue that Madrid might settle for less weapons if it could get a mutual security treaty with the United States. American diplomats are convinced this would be an outrageously false economy.

At the least it would open the United States to serious charges from anti-Franco Spaniards that it deliberately supported his dictatorship, as Cuban moderates who initially supported Castro charged about Batista. At the worst, it could impel the United States into an unwanted war.

State is opposed to asking the Spaniards again to extend the March 26 deadline because that would stiffen Madrid's intransigence. Time is running out. Soon, probably before the Senate committee gets down to work on finding out how the United States gets pushed into pledges which lead to national disasters, President Nixon will have to decide how badly the United States wants its Air Force and Navy bases in Spain.

Mr. BROWN of California. Mr. Speaker, I commend the efforts of my colleague from New York (Mr. LOWENSTEIN) in his perceptive analysis and recommendations regarding lease renewals for American military bases in Spain. As does Mr. LOWENSTEIN, I argue that we

should let the leases lapse, but I think this decision should be part of a much larger move toward a positive U.S. foreign policy.

Ideally, foreign policy ought to be determined by Congress and relevant executive agencies. But, as far as I can discern, during recent years most foreign policy has emanated from the Defense Department, with both Congress and executive agencies serving as virtual rubberstamps.

In all too many instances, "national security" has turned into "international hegemony." The United States plays the part of benevolent patron for many regimes; no matter if they are authoritarian, repressive, racist—ruling cliques are favored as long as they retain vestiges of anticommunism. Humanitarian values get brushed aside, only adherence to anticommunism counts.

Given such distortions within foreign policy precepts, it is not surprising that two decades of dictators—the Diems, Kys, Trujillos, Chiangs, Francos—arise and remain smug and secure for so long in countries where needs for massive social, political, and economic change are so evident. Nor is it surprising that eventually we become terribly entangled within these countries' political affairs, with the United States often finding its support with the forces of status quo and oppression. And the results are equally unsurprising: Taiwan, Korea, Lebanon, the Dominican Republic, Cuba, Vietnam, just to name major catastrophes.

The antidote for this inept system of foreign policymaking is not hard to swallow. In simple terms, Congress—at least—must fully reassert itself in foreign policy matters, and a proper balance be established between military and diplomatic.

Congress already has the means to accomplish such a redirection in its use of the legislative appropriations process. Now, a determination to use those means must be undertaken.

A good place to start is in policy regarding our foreign military bases, and congressional disapproval of extending the Spanish leases should be the first step.

Certainly, tactical importance of most—if not all—American military bases outside this country has declined with the rise of our vaunted ICBM force. On strategic grounds, foreign bases tend more to exaggerate tensions than provide protection. Indeed, the Soviet deployment of an ABM system closely followed the mid-1950's decision to ring Russia with a series of nuclear-equipped military bases.

On humanitarian grounds, the vast sums given as lease payments reinforce oppressive governments and thus halt any evolving internal pressures for equitable development.

In economic terms, balance of payments outflows to support bases are considerable, and each dollar expended for such bases means one less dollar for vital social programs both at home and abroad.

The current negotiations with Spain are typical of the situations into which the United States has been forced by maintaining these foreign bases. The Franco government is classic in its application of terror and repression; his recent vacillations are near-farcical as a display of a totalitarian who turns on and off periods of "liberalization" to suit his own whim or to improve a "public image" for foreign eyes. No, the case against the Franco government is not hard to make.

But we are fooling ourselves if we terminate our lease agreement with Spain purely on grounds of the "unattractiveness" of that government. Much as I oppose the tenets of the Franco government, I feel stronger that we could just as easily scratch out the name "Spain" and fill in its place any one of a dozen other countries or leaders. And even in those cases I do not advocate pulling our bases out because we are backing a bad regime. That, of course, is a factor, but it is not my major objection.

As long as the militarists hold reign in foreign policymaking, the proclivity for planting "American enclaves" all over the world will persist. And as long as these enclaves remain, I can foresee no end to the spate of flare-ups which trouble us year in and year out. An American "presence" is virtually imperialistic in its significance; and it is this imperialism of power, this aura of political and military greatness which above all must be halted.

We know America is not attempting to conquer the world. No rational person can argue that we should try to make the rest of the world into carbon-copy American strongholds. Yet, to foreigners who see our far-flung military bases stacked with their awe-inspiring arsenels of destruction, the thought of America as world policeman must occur often.

And it is this image of America, this view so pleasing to the militarists, that must be changed. My view of America is different; it is one of a nation still confronted with an unfinished revolution, a revolution so impressive that all the strength of the military-industrial-political-educational complex cannot stave it off, a revolution based on providing freedom, equity, and justice for all citizens of all lands.

I oppose any and all American military bases abroad because they impede rather than enhance our national security. I favor any measures which can be taken to reduce our foreign military commitments. I urge my colleagues to join me in voting against any further funds for such bases.

GENERAL LEAVE

Mr. LOWENSTEIN. Mr. Speaker, I ask unanimous consent that all Members have 5 legislative days in which to revise and extend their remarks and include extraneous matter on the subject matter of my special order.

The SPEAKER pro tempore (Mr. MATSUNAGA). Is there objection to the request of the gentleman from New York?

There was no objection.

VIETNAM ROLL OF HONOR

The SPEAKER pro tempore (Mr. MATSUNAGA). Under previous order of the House, the gentleman from Illinois (Mr. FINDLEY) is recognized for 30 minutes.

Mr. FINDLEY. Mr. Speaker, the United States is at a crucial point in Vietnam policy. This week the aggregate number of our men killed by hostile action will surpass Korea. If the toll continues at the present level for another 11 months, it will surpass our losses in World War I. Stalemate is evident on the field of battle, where the best that can be said is that allied forces have kept Hanoi from winning. Stalemate is equally evident at Paris, where only the shape of the conference table has been settled.

These grim facts converge at the White House where the new administration faces the necessity of deciding what to do with the legacy it assumed on inauguration day.

The voluminous transition papers prepared by President Johnson's staff with the aim of providing the new administration with a balanced appraisal of current problems should have included a series of three documents prepared by the Directorate for Statistical Service, Office, Assistant Secretary of Defense—Comptroller.

These documents, captioned "List of Casualties Incurred by U.S. Military Personnel in Connection With the Conflict in Vietnam," list by name and hometown each American killed.

In my view, these names should be called to the attention of the administration and the American people because they establish, as no other arrangement of words can possibly do, the true dimensions of the Vietnam war in total overall terms, as well as the most intimate.

For that reason, I have placed the entire listing in my remarks today, totaling in all 31,379 names.

The publication is thoroughly justified, of course, for another reason. While our combat participation in the war may have been a grievous error from the very beginning—as I firmly believe it was—the men who have died in this mistaken conflict nevertheless deserve every recognition and honor. The fact that misguided national leadership, in which I freely acknowledge my own share of the blame, erred in sending them to war diminished in no way whatever their heroism, made no easier their sacrifice, and lessened not at all the anguish of their relatives.

The names listed are all of those killed by hostile action from the very beginning of the war through the end of January 1969, a few days after President Nixon took the oath of office. The listing therefore constitutes a description of

the dilemma which immediately confronted Mr. Nixon and his staff.

The listing is especially appropriate this week because, making adjustment for the Department of Defense's 1-week lag in reporting those killed in action, it is clear that Vietnam deaths have now surpassed Korea. Nearly one-third occurred since the "peace offensive" began last March 31.

This fact raises sobering questions:

What advantage to our national interest has been secured by the death of the men listed on the following pages?

Were sacrifices of this magnitude justified by events and issues in Vietnam?

In Korea, by contrast, a like amount of sacrifice left that country with both military and political stability—conditions which exist to this day. In Vietnam, despite our heavy investment, the military situation is so grim that the enemy is able to mount heavy attack across a broad front, even close to Saigon.

Last week I urged President Nixon to make the fundamental decision to withdraw our combat forces, arguing that present circumstances are the best conceivable for the decision and warning that the decision will become increasingly difficult as time goes on.

In my view our involvement was a mistake from the beginning, and the rational corrective action is to withdraw—not to compound the original error by staying there.

Questions that inevitably will be asked are: Would withdrawal dishonor those who have died? Would it be a camouflaged surrender unworthy of our Nation?

Perhaps the best answer is another question: Will additional casualties alone rectify mistaken war policy?

If the premise is accepted—as I believe it must—that our military policies have been based on false assumptions all along, then the best way to honor the war dead is to take steps to assure that the casualty lists stop growing.

To waste additional lives simply because of previous deaths is rationalization so warped as to dishonor every noble sentiment attached to the name America.

To justify more casualties primarily through appeals to national vanity is to distort our greatest tradition, under which the interests of the state are always considered subordinate to those of the individual citizen.

Every parent of a war casualty with whom I have talked has expressed the fervent hope that the loss of American lives will quickly stop.

I am glad to yield to my good colleague and friend, TIM LEE CARTER, and before doing so, to take note of his wisdom, so often expressed over the past 2 or 3 years, in which he has been in the forefront of those who have, I believe, courageously questioned the wisdom of our war policies. I came to his view at a relatively late date, and I am glad to salute my "leader."

Mr. CARTER. Mr. Speaker, I thank the gentleman for yielding. I think that the years our men have spent in Vietnam, the lives we have lost there, the thousands of wounded, and the billions of dollars we have blown away are mute testimony to the fact that we have made the greatest military mistake in the history of the United States. I regret this is true. I have always supported the men who are in Vietnam, and certainly I shall continue to support them, as has the distinguished gentleman in the well. I have supported the GI bill of rights. I was the first Member to introduce the GI insurance bill. I have supported everything which would be helpful to the men. However, I feel that in their conception, the ideas for having our men in Vietnam were wrong. And, remember, we must recall when this was started. It was not in 1963 or 1964. This was was first escalated in 1961 when 17,000 men were first placed over there. Later, in 1964, about the time of the Tonkin Bay resolution, we were told that our vessels, the destroyers, *Maddox* and the *C. Turner Joy* were under attack by North Vietnamese vessels. Hearings in the Senate have shown beyond doubt the commanders of those vessels today know not whether they were attacked or not, and will not state whether they were attacked at that time.

Mr. Speaker, it would be as if we were attacked by a fleet of ships from Mexico, if we were at war with Mexico. Suppose that was the case, and two Argentine vessels happened to be among the group attacking us with vessels at war. Actually, if they attacked our coasts, they would be fair game. If we had two destroyers with the South Vietnamese vessels that were attacking North Vietnam in 1964, then I submit, Mr. Speaker, that shots at them would have been justified. North Vietnam had as much right to fire at them as we would have to fire at vessels accompanying the people at war with us. I was not a Member at that time, but the House took the distorted information it had, and committed thousands and thousands of troops to South Vietnam, with the effect which we have had today. And still we are in this ceaseless, tireless war where our men are mangled and mutilated, and in which 33,000 have now been killed, over 200,000 have been wounded, and $100 billion has been blown away.

To what effect? To what avail? We are still entangled in this "green hell" of Vietnam, in this morass. I regret, Mr. Speaker, that this is true. Certainly for 2 years, in 1965 and 1966, I tried to go along with what we call the loyal opposition. At that time it seemed that they were making quite an effort to do something in the war.

But after two visits to South Vietnam, one in 1965 and one in 1966, it became evident we were not winning. On the second visit, I saw villages which supposedly had been pacified which had fallen back into the hands of the enemy.

After seeing these things, it became apparent that actually during those 2 years of 1965 and 1966, we had not made the valiant effort to win which we should have. Up until that time I had said we should get in with all we have got and win it and get it over with and get out. But we did not do that. It was sort of a tit for tat, in which we would retaliate only with light counterattacks. The result has been the continued loss of life and our continued desperate involvement in Vietnam.

Certainly I do not want to be critical of anyone or of the present administration. I would hope and pray our President will continue in his efforts to get peace for this country and to bring the finest young men of the United States back home where they can live peacefully and pursue their lives as they did previous to this terrible engagement.

This war, Mr. Speaker, has not been fair at all to the manhood of America. The underprivileged youngsters, the ones who have not gone to college, are the ones who have borne the brunt of the war. They are the ones who have been subject to the draft. I regret this is true. Those who were affluent, those who were able to go to college, those who were able to get into the National Guard and the Reserve have been spared.

I feel certainly, if I may digress a moment, that our draft laws should be improved so our youngsters would be held liable for draft for a shorter period of time than they are now and if possible a volunteer army should be instituted.

Again, I certainly thank the gentleman in the well for yielding to me. Without doubt, he is one of the great thinkers in this House and one who has the courage of his convictions. I fondly hope and fervently pray that our present administration will be able to get us out of the morass in Vietnam which threatens to get us into other wars in Laos and Thailand and perhaps Burma and Malaysia and Indonesia.

Mr. Speaker, I thank the distinguished gentleman.

Mr. FINDLEY. Mr. Speaker, I appreciate very much the fine contribution of the gentleman from Kentucky.

I am sure I speak for my friend, the gentleman from Kentucky (Mr. CARTER), as well as for myself in stating that we have nothing but compassion for the President and his staff as they wrestle with this very vexing problem. It is not easy to admit a mistake, whether the entity involved is a person or a nation. It is a mark of greatness when the grievous error does come to light to face it squarely and correct the error.

That is precisely the problem which lies at hand. It is not easy for the President of the United States, even though the problem he confronts is one that was inherited, for him to take a step to correct this error. But it is also fair to say, I believe, that the longer this fundamental decision is put off, the more difficult it becomes. That is why, in a spirit of compassion and good will and a desire to be helpful in the appraisal of various forces and various elements that must necessarily go into a decisionmaking process at the White House, that I hope this will be a worthwhile contribution.

Mr. Speaker, here is the roll of honor, consisting almost entirely of men between 19 and 24 years of age. It presents the precise width, breadth, and depth of the war Mr. Nixon has inherited:

DEATHS RESULTING FROM HOSTILE ACTION IN VIETNAM THROUGH DECEMBER 31, 1967

FCC'S PROPOSED BAN ON CIGARETTE ADVERTISING IS DISCRIMINATORY AND USURPS CONGRESSIONAL AUTHORITY

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from California (Mr. TALCOTT) is recognized for 5 minutes.

Mr. TALCOTT. Mr. Speaker, on February 5, 1969, the Federal Communications Commission—FCC—issued a notice of proposed rulemaking, amending part 72 of the FCC rules, to the effect that the FCC was banning all cigarette advertising on radio and television unless the Congress vetoed the order before June 30, 1969.

I object.

I object not because I come from a tobacco producing or processing district, because I do not.

I object not because I own any interest in any radio, television, advertising agency, or tobacco-related business, because I do not.

I object not because I believe cigarette smoking is in any way beneficial to one's health, ego, or well-being, because I do not.

I object for two reasons which are basic and fundamental to our system of government—the proposed ban is discriminatory and usurps congressional authority.

My credentials for objecting will measure up to any other Member. For years I have worked in many ways to dissuade youngsters from starting to smoke before they know the consequences. I opposed the cigarette package labeling law because it was weak. I have urged the networks to voluntarily restrict cigarette advertising during daytime youth programs and sporting events, and am disappointed with their response. I have worked with the American Cancer Society to obtain more antismoking advertising on the electronic media. I believe that cigarette smoking is dangerous to one's health—it can and does cause death and agony.

I believe young people become hooked by smoking even though tobacco may not be technically addictive, and that radio and television advertising induces some teenagers and preteenagers to start smoking before they are able to make a responsible judgment. I believe cigarette smoking shortens more lives, causes more misery and suffering, wastes more money, and is responsible for more property damage than all nonmilitary guns, which have been the object of considerable recent congressional attention. Cigarette smoking also contributes significantly to the air pollution of public transportation and accommodations, and to the litter of our public places.

In brief, I oppose cigarette smoking for a myriad of sound reasons.

It is the responsibility and the prerogative of the Congress to initiate and enact any legislation which regulates interstate advertising. The Congress did not and should not delegate this power to any independent agency of the Federal Government. The Congress has given the FCC the authority to regulate "interstate and foreign commerce in communications." This power includes authority to issue radio and television licenses and to regulate those licensees—but it does not include the authority to set moral or social standards and then restrict truthful, balanced advertising of a perfectly legal product. By this order the FCC has spent considerable time and effort to arrogate to itself a constitutional function of the Congress.

The FCC notice of proposed rulemaking is discriminatory. It will prohibit cigarette advertising on radio and television, but this is only a part of total cigarette advertising. Interstate cigarette advertising will still be permitted in newspapers, magazines, and by direct mail.

This discriminatory factor emphasizes the basic error of the FCC order. No single independent agency should be permitted to enact a law which proscribes for only a portion of a particular industry. If cigarette advertising is deemed to be illegal, it should be banned in all media.

I oppose the FCC order because the law-making responsibility of the Congress should not be usurped by an independent agency. Congress should not mutely stand by while an independent agency arrogates to itself a legislative function.

The FCC order is discriminatory, and Congress should intervene to obviate this unfair discrimination.

Mr. Speaker, I urge that the Congress consider the whole subject of cigarette advertising, vitiate the FCC order, and enact whatever legislation is deemed necessary.

THE PACIFIC NORTHWEST-PACIFIC SOUTHWEST INTERDEPENDENCE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from California (Mr. HOSMER) is recognized for 20 minutes.

Mr. HOSMER. Mr. Speaker, despite some opinion differences which might exist between the Pacific Northwest and the Southwest States over water matters, we have always taken it for granted that the two regions had some very basic, and important, common interests.

Now we no longer have to depend on mere assumptions. A new, comprehensive study, entitled "Economic Inter-Dependence of the Western States," has been made public and it clearly, forcefully portrays what we have long thought: that the economic ties between the four great States of the Northwest—Washington, Oregon, Idaho, and Montana—and the seven States of the Colorado River Basin—Arizona, California, Nevada, Colorado, Wyoming, New Mexico, and Utah—are so close and so extensive that it is not only economically smart, but almost necessary, that the 11 States consider themselves as a single economic unit.

Whether or not the two regions ever decide upon any transbasin transfer of surplus water, this study will serve as a meaningful basis for future interregional relationships. It should be read and digested not only by the Members from the 11 States involved but by all Members with problems similar to ours and those interested in the strong economic dependence between specific regions vis-a-vis neighboring areas and the U.S. economy as a whole.

This report was prepared by an outstanding Los Angeles economist, Wilbur McCann, for the Colorado River Association, a citizens organization concerned with the water supply of the Colorado River and how it affects the six major agencies in southern California which rely on the river for about 80 percent of their total water needs. The report was unveiled March 24 at a meeting of the Portland (Oreg.) Chamber of Commerce by Philip F. Walsh, vice president for economic development for the Los Angeles Area Chamber of Commerce.

I request permission to have the whole of Mr. Walsh's fine speech inserted with my remarks, but I would also like to quote some pertinent passages from it.

Quoting some of the report's conclusions, Mr. Walsh points out that "the West has long played an important part in the economic development of the United States and its role in the future will become even more vital. The long-range growth and economic health of this Nation will be increasingly affected by what happens in the West."

The report proves, he noted, that "virtually every part of the West has an economic interest in every other major geographic segment of the country. This community of interest stems from the flow of goods and services between points within the West in both directions, with the receiving areas benefiting from this interchange as well as the shipping or originating areas."

These are just a few examples of the North-to-South commerce:

The four States of the Northwest—Washington, Oregon, Idaho, and Montana—sell the 25 million people in the Southwest everything from apples to insurance—and in vast quantities. About one-third of the tonnage of all commodities shipped by rail out of this region goes to the Southwest. More than one-fourth of the Northwest's total lumber production—most of it in Oregon—is shipped to the Southwest. Manufacturers in Seattle and vicinity ship more than one million tons of goods yearly to the Southwest.

The Los Angeles area alone buys more Washington apples than Chicago, New York and Detroit combined; more than a half million bushels of Oregon apples go to just California each year by truck. The Northwest, principally Idaho, supplies around 30 per cent of all the butter shipped into the Los Angeles market. Idaho and Oregon ship more than 300 million pounds of potatoes a year to four city markets—Los Angeles, San Francisco, Denver and Salt Lake City. The shipments of Oregon potatoes to these four cities constitute more than half of the total shipments to 41 cities throughout the nation. Los Angeles is also the most important market for dry onions from Oregon.

Considering air travel, nearly 50 per cent of the passengers at Seattle-Tacoma airport are either going to or coming from points in the Southwest. The pattern is similar at the Portland airport and others up here.

To turn to another area, the 12 insurance companies headquartered in the state of Washington do more than 30 per cent of their business in California alone.

The findings which I have just cited, a mere fraction of the eye-opening data contained in the McCann report, certainly give substance to the conclusion that "in problems affecting the economic development of major portions of the West, it is logical to consider the West as a whole because of the extensive and real interdependence involved. The West also justifies a regional approach to its problems on the basis of its size and importance. If the West were a separate country, it would rank fifth in area and 16th in production among the 140 nations of the world."

Here is the text of Mr. Walsh's speech:

NORTHWEST AND SOUTHWEST—ECONOMIC PARTNERS

It is a pleasure to be with you here today on behalf of the Los Angeles Area Chamber of Commerce. I am also here in a very real sense on behalf of the entire Pacific Southwest which in the context of my talk means the seven states of the Colorado River Basin,

namely, Arizona, California, Colorado, Nevada, New Mexico, Utah and Wyoming.

I might begin by saying how greatly impressed I was by the sight of the mighty Columbia River as our plane came in to your airport late yesterday afternoon. The thought flashed suddenly into my mind why no one in California or elsewhere in the arid Southwest has ever considered investigating whether some of that majestic flow of water might be surplus to your needs up here.

Seriously, the Southwest believes as strongly as ever that this question should be studied fairly and carefully. The subject of my talk today is not water but, as a former chairman of the water and power committee of the L.A. chamber, I must say that water shortages will inevitably occur in the Southwest unless more water is brought into the Colorado River Basin. Desalting of ocean water, whether modification, reclamation of waste water, more efficient use of existing supplies—all these will play an increasingly important part in meeting future needs.

However, we in the Southwest are convinced that large-scale importation of water from some other basin will also be necessary and that it is shortsighted not to include a study of the Columbia in any overall assessment of how best to solve this far-reaching problem. And when I say shortsighted I mean from the standpoint of the Northwest as well because of the innumerable and strong economic links between the two regions. If an impartial, objective study proves there are really surplus waters in the Columbia, the exportation of some of that surplus to the Southwest might prove to be the wisest economic investment the people of the Pacific Northwest ever make.

Now, the study of another sort which I will discuss today—it is entitled "The Economic Inter-dependence of the Western States"—may turn out to be only a historical footnote for, as you may have heard up here, an interesting assortment of telepaths, astrologers, cultists and kooks are predicting doom for much of California very shortly. A devastating earthquake will split off the coastal areas of the state and Los Angeles and San Francisco will plop neatly into the ocean. San Francisco and Los Angeles will finally have something in common. This is all going to happen at noon on April 4 which also happens to be Good Friday—but apparently not for California. The spirit of free enterprise never flags in Los Angeles and there is already a radio commercial on the air selling residential lots far, far out on the bleak sands of the Colorado Desert. "The beaches are already in," the huckster says, "and the Pacific Ocean will be arriving soon."

However, undaunted by the approach of doomsday, let me go ahead anyway. First, a word of explanation about the origin of this study. It was made for the Colorado River Association, a citizens organization concerned over the water supply of the Colorado River Basin. The study was conducted by Wilbur McCann, an economic consultant of the highest standing. It is being made public today throughout the West simultaneouly with my talk here. There will be copies available for you as you leave this meeting. I hope you will take one with you and read it carefully.

Now, we didn't need this report to tell us or you that a lot of food stuffs and manufactured goods come from the Northwest to the Southwest. But the enormous volume and the striking diversity of all this is brought out with sharp impact by the information Mr. McCann assembled from a multitude of authoritative sources and organized into understandable shape. I am a businessman myself and I did not expect to learn too much of value when I opened this booklet. In contrast, I learned a very great deal for I came to realize as I never had before that this great Western part of the United States is so closely interlinked economically that there is no Northwest or Southwest economy—there is just a single, thriving, constantly growing economic unit. And it is time that we all recognize this and work even more closely with one another in seeking answers to common problems and, where we can, helping one another.

Since I first read this study a month or so ago, I've been clipping stories from the newspapers that point up the existence of the closest kind of economic partnership in the West. For example, just a few days ago a 19-million-dollar contract for construction of a tunnel in the Los Angeles area was awarded to Lockheed Shipbuilding and Construction Company of Seattle. Proving you are not against all our water planning the tunnel will be part of the distribution system for the water that the State of California is bringing 450 miles down from Northern California. And your Governor Tom McCall held a press conference in Los Angeles to invite California business and industry to expand their activities into Oregon. And I read where some of the charming specimens of young America from the Haight-Ashbury district of San Francisco were flocking north to establish a a hippy colony north of Seatttle—not far enough north, you'll say. And I read an editorial about how the Pacific Northwest Power Intertie with the Southwest has lessened the chances of either of the areas suffering from a blackout as well as providing direct economic benefits to each region.

As a matter of fact, the Pacific Northwest-Southwest intertie deserves some special comment here today. It is an excellent working example of how these two great regions can cooperate to mutual advantage. You have vast power resources and we have vast power needs. A group of public and private electric utilities in the Southwest have agreed to buy from the Bonneville Power Administration surplus peaking capacity and surplus energy. The intertie system is a two-way street which also gives the Northwest the right to buy excess Southwest energy. The ability to transmit power in both directions increases the flexibility and reliability of operation of electric power systems throughout the West.

This was dramatically demonstrated last December when a construction crane working at the Grand Coulee power plant of the Bonneville system accidentally contacted power lines carrying one million kilowatts of electrical energy. The interconnected utilities in California were able to absorb this "bump" without incident, avoiding what might have been a major power blackout. A week later the California utilities again were of major assistance to the Northwest. Severe winter storms and the temporary loss of generation at the Bonneville Hanford nuclear power plant made it necessary for the Northwest to call on California utilities for assistance through the intertie network.

The capability of existing 500,000-volt intertie transmission lines to handle emergency deliveries of power under extreme conditions, as I have described, will be beefed up substantially when the 750,000-volt direct current line being built by the Los Angeles Department of Water and Power to provide another major power link with the Bonneville area is completed late this year. While this 105-million-dollar project was conceived primarily to bring an important new power resource to the Los Angeles area, it may prove of critical importance to the Northwest again if emergency conditions should require.

These operational considerations, important as they are, are fringe benefits to the basic financial fact that the purchase of surplus power through the intertie network is expected to increase net income of the Bonneville Power Authority by as much as 20 million dollars annually on a long-term basis. This proves how mutually beneficial regional cooperation can be.

But now let me tick off a few statistical highlights of this economic study of the **inter-dependence of the Western States. . . .**

The four states of the Northwest—Washington, Oregon, Idaho and Montana—sell the 25 million people in the Southwest everything from apples to insurance—and in vast quantities. About one-third of the tonnage of all commodities shipped by rail out of this region goes to the Southwest. More than one-fourth of the Northwest's total lumber production—most of it in Oregon—is shipped to the Southwest. Manufacturers in Seattle and vicinity ship more than one million tons of goods yearly to the Southwest.

The Los Angeles area alone buys more Washington apples than Chicago, New York and Detroit combined; more than a half million bushels of Oregon apples go to just California each year by truck. The Northwest, principally Idaho, supplies around 30 per cent of all the butter shipped into the Los Angeles market. Idaho and Oregon ship more than 300 million pounds of potatoes a year to four city markets—Los Angeles, San Francisco, Denver and Salt Lake City. The shipments of Oregon potatoes to these four cities constitute more than half of the total shipments to 41 cities throughout the nation. Los Angeles is also the most important market for dry onions from Oregon.

Considering air travel, nearly 50 per cent of the passengers at Seattle-Tacoma airport are either going to or coming from points in the Southwest. The pattern is similar at the Portland airport and others up here.

To turn to another area, the 12 insurance companies headquartered in the state of Washington do more than 30 per cent of their business in California alone.

And then there's beer. . . . The Los Angeles-Orange County area with some eight million people is by far the largest beer market in the West and major breweries throughout the country compete intensively in this market. A survey conducted by the marketing research department of the Los Angeles Times showed that one of the two most popular brands in the area is Olympia, a product of the Olympia Brewing Company near Tacoma. And as the Olympia ads in the magazines say, "All beers are over 90 per cent water . . . that's why we brew ours at Tumwater." What better proof do you need that you really aren't basically against letting us have some of your water?

A few more examples of Oregon's exports for the latest year records were available—and these cover shipments only to California. . . . 223,000 beef cattle and calves . . . 162,000 sheep and lambs . . . 23,000 tons of barley, oats, wheat and other grains.

I could go on at great length with more examples that abound in the report demonstrating how much business and industry and agriculture up here look to the Southwest for their markets, but they are there in the report for you to read yourself. Let me instead give you some of the general conclusions reached by Mr. McCann on the basis of the statistics he collected.

First, the West has long played an important part in the economic development of the United States and its role in the future will become even more vital. The long-range growth and economic health of this nation will be increasingly affected by what happens in the West. Based on Census Bureau projections, the 11 Western states will account for 25 per cent of the net population growth in the United States as a whole between now and 1985. In other words, a fourth of the nation's total growth will be concentrated in the West in the immediate years ahead. The West will also be responsible for

a fourth or more of many other aspects of national growth.

Second, virtually every part of the West has an economic interest in every other major geographic segment of this part of the country. This community of interest stems from the flow of goods and services between points within the West in both directions, with the receiving areas benefiting from this interchange as well as the shipping or originating areas. In problems affecting the economic development of major portions of the West, it is logical to consider the West as a whole because of the extensive and real inter-dependences involved. The West also justifies a regional approach to its problems on the basis of its size and importance. If the West were a separate country, it would rank 5th in area and 16th in production among the 140 nations of the world.

And the last of the conclusions of this study. . . . As transportation and communication methods continue to improve, the degree of economic inter-dependence in the West will increase. Modern means of transport brought the West closer to distant markets (world and national) at the same time telescoping the West into a more compact viable economic unit. Forces are at work which will continue this trend and bring the West even closer together. The West will become more diversified and specialized, depending to an ever greater extent on the exchange of goods and services between its various geographic areas. It is obvious to even the casual observer that this trend is under way in countless ways.

And in concluding let me add a few more words of my own. I believe this economic study—which as far as we know is the first one to bring together a wealth of material of this kind—should be an invaluable tool in unifying the leaders in all the Western states on countless important programs. Perhaps it will help those of us in the Southwest to solve our long-range water problems by suggesting to you that their solution may be just as much in your fundamental interest as in ours. I can tell you that the Board of Directors of the Los Angeles Area Chamber of Commerce looks forward to an even friendlier and more productive relationship with the Portland chamber than we have enjoyed in the past. If the West is in truth a single economic unit—and can there be any doubt remaining that this is the fact—it is urgently necessary that we help each other in all ways that we can find.

THE 51ST ANNIVERSARY OF BYELORUSSIAN PROCLAMATION OF INDEPENDENCE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Michigan (Mr. GERALD R. FORD) is recognized for 3 minutes.

Mr. GERALD R. FORD. Mr. Speaker, today marks the 51st anniversary of the day when the Byelorussian people proudly proclaimed their independence only to be overwhelmed by Bolshevik invaders. Today, lovers of freedom among the Byelorussians just as proudly proclaim that the Byelorussian Soviet Socialist Republic established in place of independent Byelorussia is simply an administrative arm of the Soviet Union and does not truly represent the Byelorussian people. I firmly and fervently believe in the right of national self-determination, Mr. Speaker. The only government worthy of the name is that which governs by consent of the governed. Let it be noted here and now that there has never been a free election in Byelorussia during the 51 years since it first was absorbed into the Union of Soviet Socialist Republics. In their dedication to truth and freedom, Americans salute freedom-loving Byelorussians here and throughout the world on this the 51st anniversary of their independence day. We share with them the hope that one day they will realize their national aspirations and retrieve the rights which are properly theirs.

SPECIAL ORDER TRANSFERRED

Mr. HANSEN of Idaho. Mr. Speaker, I ask unanimous consent that the special order heretofore granted to the gentleman from Washington (Mr. PELLY) for March 26, 1969, be transferred to Thursday, March 27, 1969.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Idaho?

There was no objection.

THE UNITED NATIONS' 1972 CONFERENCE ON THE HUMAN ENVIRONMENT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Wisconsin (Mr. REUSS) is recognized for 15 minutes.

Mr. REUSS. Mr. Speaker, the continuing deterioration of our environment has reached crisis proportions. If this many-faceted worldwide problem is not attacked quickly and effectively, the results will surely be catastrophic.

An important step toward the restoration of a healthy environment was taken on December 3, 1968, when the United Nations General Assembly unanimously agreed to hold a U.N. Conference on the Human Environment in 1972.

Many of us have become increasingly alarmed by the steady growth of environmental contamination. I have seen it in my home State and in other Great Lakes States. I have seen it in many other parts of our country. And I have seen it abroad. Man's activities are largely responsible for the deterioration of our air, water, and land, and the degradation of the living things on our planet. It is man's responsibility to find the cure.

For this reason I am heartened by the U.N.'s action. I am sure that millions of persons throughout the world who have become increasingly concerned with both the urgency and the magnitude of this problem share my hope that this conference will help to protect and improve man's environment.

The 1972 conference will study the accelerating impairment of the quality of the human environment caused by air and water pollution, erosion and other forms of soil deterioration, waste, noise, and secondary effects of biocides, which are hastened by rapidly increasing population and urbanization.

Although the conference agenda has not yet been established, it is likely to emphasize such questions as what man, by himself and through the U.N. and other international organizations, can do about air and water pollution; the adverse effects of pesticides, fertilizers and other chemicals entering the environment; radioactive wastes; oil spills from tankers; the rising carbon dioxide content of the earth's atmosphere; noise pollution; the continuing crowding of people into urban areas; and the physical and psychological effects of uncontrolled urban growth.

I am particularly pleased that the conferees will also consider the question of how to deal most effectively with the world's disappearing plant and animal species. In the 88th Congress, I introduced a resolution, House Concurrent Resolution 107, which I reintroduced in the 89th Congress, House Concurrent Resolution 1032, calling on the United States to "take all necessary steps to convene an international governmental conference on the conservation of wildlife, after consultation with, and if possible, under the sponsorship of, the United Nations or its specialized agencies."

On October 7, 1966, I testified in support of House Concurrent Resolution 1032 before the Subcommittee on International Organizations and Movements of the House Committee on Foreign Affairs, which thereafter reported it favorably.

In my testimony I underscored the need for a coordinated international effort "to conserve the earth's resources of wildlife." We must have, I stated, "joint action by all of the developed and developing countries, which can only come out of an international conference in order to bring an end to the disastrous poaching of wildlife." I also pointed out that voluntary international conservation organizations—such as the International Union for Conservation of Nature and Natural Resources—the IUCN—had taken the lead to save endangered species of wildlife from extinction.

The world's conservation needs far exceed the resources of private organizations. The participation of the governments of the world—their expertise, technical help, information, experience, and financial assistance—is required to keep the great benefits of conservation and to avert the loss of world assets that are literally priceless.

The IUCN recently reported—almost 2½ years after the hearings on House Congressional Resolution 1032—that "mammals alone are disappearing at a rate of one species per year," and that "the ranks of 250 mammals are dwindling so fast that they may become extinct at any moment—in a year or in a decade."

The conference participants will face both an enormous task and an enormous challenge. To the assembled member governments, natural and social scientists, educators, businessmen, engineers, and other leaders, will fall not only the job of discussing the problems and making the decisions, but also the task of recommending the action that is needed to attain and preserve a healthy environment for all mankind and living things.

In the meantime, we in America must intensify our efforts to control, and eventually to prevent, the pervasive contamination of the environment. For no one is immune from the ravages of this man-made destruction.

MIAMI, FLA., YOUTH HOLD SUCCESSFUL RALLY FOR DECENCY

(Mr. FASCELL asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. FASCELL. Mr. Speaker, national attention was focused on Miami, Fla., this past Sunday as some 30,000 teenage citizens, celebrities, and others gathered in the Orange Bowl for the Miami Teenage Rally for Decency.

This outstanding demonstration of the basic goodness of the overwhelming majority of our youngsters came about in spontaneous reaction to the recent appearance of a music group whose lead singer was subsequently charged with indecent exposure. That "performance" outraged most Miamians, but it was the teenagers themselves who took the lead in arranging the "down with obscenity" rally to counteract the adverse picture which that event created.

Miami's teenagers wanted the world to know that they were not sitting idly by while such a group smeared the reputation of the entire youthful community. And the world turned its eyes to their message as 30,000 "stood up to be counted" on the side of decency in all aspects of life.

I heartily applaud the Teenage Rally for Decency. It is a stirring and patriotic reminder of the basic creed of all Americans—and of the spiritual and moral values that have made this country great. I devoutly hope that it will help lead to a revitalization of the wholesome national spirit of our heritage, as millions of other proud Americans also "stand up" for decency.

With the fine example set by the teenagers of Miami, I hope and believe that other youngsters throughout this fine land will realize the need for each of us to contribute his part to the goal. By uniting in purpose and spirit, our citizens can restore the high standards of decency and righteousness that have served us so well during our history.

Among the many news media covering the rally was the Miami Herald. For the benefit of my colleagues, I am happy to include its accounts of the event in the RECORD.

The articles follow:

DECENCY RALLY RATTLES ORANGE BOWL TO RAFTERS

(By Jean Wardlow)

Roaring "rock" and cheering teenagers shook Miami's Orange Bowl stadium to its cantilevered roof and rattled it down to its locker room doors Sunday as a crowd of 30,000 "stood up to be counted" at the Miami Teenage Rally for Decency.

"I want to tell you," said The Great One, Jackie Gleason, to the cheering teens rallying for 'decency' in all areas of life, "that up to now I've told people I'm happy to be a Floridian."

"But now, after what you kids are doing, I want to say I'm proud to be a Floridian."

Most of the crowd, which began arriving about 1 p.m. for the pre-show, was teens. They came, in groups or on their own, some displaying hand-lettered signs, "Down With Obscenity," "Mater Center Backs You" and "St. John Bosco Youth Movement Supports You."

There were kids in jeans, kids in sneakers, Kids in minis and Sunday best. Kids in sports shirts and flare pants and kids in tie and jacket. Negro kids, white kids, a few with beards, a few with beads; short kids, tall kids—all clapping in time to the music of some top stars whom they'd seen on TV, heard on records and who were appearing at their rally for free because they believed "in our cause."

Sleepy-eyed Ronnie Smith of The Lettermen was clutching his breakfast-lunch—part of a hot dog and a coke—because the pop singing group had driven all night without sleep after a Saturday night concert in Jacksonville to take part here.

"We wanted to take part to bring back the good will entertainment groups should have and which was lost to some extent by what happened (with The Doors' performance here)," Smith said.

"Man, that's a great audience," said singer Barry Smith, who had had to shed his dapper jacket and mop his brow Sachmo-style because of the hot sun. "I'd like to find out who's their agent," he joked.

"It's tremendous," said a smiling and sunburned priest, Father James Briggs of St. Mary's Cathedral. He was coordinator of the rally which was supported jointly by Protestant, Catholic and Jewish groups, civil and community leaders from all faiths and political areas of Dade.

"It won't stop here," one of the rally's teens said. "This shows we are in the majority. The kids are with us."

(It is estimated that the countywide total of Dade's teenagers is 70,000.)

Father Briggs said the rally "will probably evolve into a countywide group. Gleason, who had been driven in in a 1911 touring car (all celebrities arrived by these special cars) had said, "I believe this kind of movement will snowball across the United States and perhaps even around the world."

Miami Dolphin football star Bob Griese, standing on the sidelines after his appearance, said, looking out at the cheering stadium, "You hear so much on TV programs about the bad teenagers. They're not in the majority at all, and this shows what the fine teenagers are really like. I think it's been a privilege to take part in this."

From the time the youngsters first entered the stadium, the boom of electrified sound shook their eardrums. At first, sitting in seats higher up, many later moved down to sit on the wall in front of box seats to be closer to the action—performers playing from the huge stage at the east end of the field.

The youngsters clapped, waved small U.S. flags given out by the American Legion, or kicked their heels in time to the music.

It was an enthusiastic crowd—"we've had to give out a couple of dozen aspirin—too much excitement," said a nurse at one of the stadium's four emergency nursing stations. But it was an orderly crowd throughout the long program.

At first scheduled for two hours—two and a half with the pre-show—it went to nearly four hours long, with more crowd remaining at the end than at major football games in the stadium.

"This is great. Just great," said a happy Mike Levesque, one of the originators of the rally and who, one friend said, "is so tired he can hardly stand up by now. He says it will be relaxing to just go back to school now."

Mike was presented with a special book from the Freedoms Foundation at Valley Forge during the program. Singer Anita Bryant made the presentation.

The singer, obviously moved by the event, told the audience, "I had a speech prepared, but now that I see the reaction of what can happen when our young people stand up for what they believe in God and our country, it makes me at a loss for words."

Ted Mack told them, "These young people are out to show the world it isn't about to fall apart."

From the first electrified twang of The Shufflin' Kind, the CYO groups and The Rainbeaux in the pre-show, the crowd was "with" the entertainers, and the five teenage speakers who alternated between acts of the regular rally program.

And the acts showed the kids can be modern without being square or obscene.

First, to wild cheers, came the red-jacketed The Letterman ("Up, Up and Away") and then, to more wild cheers, The Village Stompers in modern Dixieland fashion whose "Washington Square" was a top hit.

There were the lavender minied and rose-colored Edward-jacketed The Faculty, which brought cheering like somebody had just made a touchdown, and The Rhodes Brothers—"the Rhodes," the kids called them—whose nationwide recording of "Never My Love" was a best seller, had a whole stadium singing along ("don't be bashful, chillun, 'cause that's not where it's at").

The acts were hip, hep and high-powered. "It's to show what we like is modern, but modern doesn't have to be obscene," said a rally teen.

By the time the big-act Impact of Brass and Sing Out America had finished their "thing" the teens had surrounded them with requests for autographs and had enough musical memories to fill a recorded scrapbook.

In between, the basic ideals of what the rally stood for on topics of God, patriotism, family, sex, and equality of man, were expressed by Joe Burke, Columbus High; Alan Rosenthal, Miami High; Pat Idlette, Miami High; Juliet James, Westminster Christian; and Mike Levesque.

"The power of Love is found in all people and makes us all brothers," said Joe Burke. "It's up to us to use our powers of democracy," said Alan Rosenthal. "We do not seek to overcome; we seek to unify."

"Sex is being exploited," said Julie James. "We can be both modern and modest. Sex is not a plaything," she said. "It is not giving up the body without giving up a commitment of the total self."

And Mike said that each man "must realize for himself that he cannot just sit back and let the world go by him. He must be a part of the world."

And as the last amplified guitar string faded out over the goalpost, the Rev. Ted Place—the offstage emcee and executive director of the Greater Miami Youth for Christ—lauded the teens "who had the courage and concern to stand here and be counted."

SHOULD DO THIS EVERY 6 MONTHS

(By Larry Mahoney)

Plain old-fashioned Americanism, tinged with a touch of rock, reigned in the Orange Bowl on a euphoric Sunday afternoon dedicated to decency.

This is the way it was:

Legionnaires, whose own wars ended long ago, pass out 20,000 pocket-sized versions of the Stars and Stripes. The Rhodes Brothers give booming renditions of "The Green Berets" and "The Battle Hymn of the Republic." The Freedoms Foundation of Valley Forge presents an award for "moral courage."

Jackie Gleason in an antique 1911 white touring car. Anita Bryant in a 1931 Model T. Ted Mack quoting Patrick Henry. Congressman Claude Pepper, newest member of the old House Un-American Activities Committee, standing at attention for The Star Spangled Banner, a Legion flag over his heart. Near him is Father Sean O'Sullivan, the young priest from County Cork who inspired the rally.

Mayor Chuck Hall, a flag in his breast pocket, likes the scene. "I think we should do it every six months," his honor said. "This is magnificent, isn't it?"

Watching the crowd are 60 off-duty Miami policemen, double the number who staffed the famous exhibition of The Doors at Dinner Key March 1. After the rally was done, Sgt. Ronnie Reeder goes before national network TV cameras to say: "This is the best Orange Bowl crowd I've ever seen; absolutely no hoodlums around. We weren't needed. The officers have decided to donate their day's pay to the rally." That comes to about $20 from each patrolman, $25 for the sergeants.

A sign: "Stay Clean—Swim! the Coral Park High Swim Team."

A Salvation Army banner flutters in the breeze on the other side of the stadium. Some 200 children, largely subteens, are recruited from the stands to march afield with The Miami Herald's giant American flags.

Moral rearmament is represented by Miami's "Up With People" singers, who sang all the old ones such as "Which Way America?" and "The Nicest People I Know Are People."

Hank Meyer, the publicist, beams as Jackie Gleason puts in a plug for Florida before the national TV cameras. Anita Bryant draws an ovation when she mentions her twins: "And they're heavyweights, by the way . . . six pounds, 10½ ounces, and six pounds, three ounces."

Mrs. Annie King James—"just say I'm past 80"—is wearing a feathered hat and a hand-knit sweater with the U.S. flag on one side and "G.O.P." on the other. She was carried into the stadium aboard her special chair.

"Wouldn't have missed it," she said. "I'm interested in better government and what these kids are doing."

Outside, a few pickets parade with signs bearing messages like this: "Jesus Is Coming. This Is The Last Generation." Ken Russell, 17, of Fort Lauderdale, explains: "We're a group of former hippies and drug addicts who're going all the way for Christ." Ken's hair is still long enough to draw unfriendly looks from a squad of policemen.

Inside, Father O'Sullivan, the cherubic Irish priest, is smiling. "The teenagers," he said, "now realize that solidarity is their strength. They will strike when the iron is hot . . ."

BILL TO HALT FLOW OF OBSCENITY

(Mr. FASCELL asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. FASCELL. Mr. Speaker, for years, Members of Congress and other concerned public officials have tried to do something about the multimillion-dollar pornography industry which is flooding the Nation with all forms of smut and filth. My own efforts as a Congressman to halt this flow of obscenity go back to my first term, in the 84th Congress, when I was a member of the Post Office and Civil Service Committee. After our committee made an extensive study of distribution of obscene and fraudulent materials through the U.S. postal system, Congress passed legislation authorizing the Postmaster General to impound mail directed to a person or firm known to be distributing such literature. I also backed legislation in the 85th Congress authorizing the detention of such mail, both at point of origin and point of destination. In the next Congress, we strengthened the Post Office's powers to detain these indecent and salacious materials by giving authorities adequate time to prepare criminal charges. Still another strong effort to combat smut was made, the "antipandering" bill, which was passed by the 90th Congress. This allows any postal patron receiving material which he considers objectionable to request the Post Office to order his name expunged from the mailing list.

I wholeheartedly and vigorously supported all of these, and other, attacks on the pornography racket. Yet our mail in congressional offices tells us that still more needs to be done. The people are complaining that unsought smut continues to fill their mailboxes. In 1968 alone, the Post Office Department received more than 165,000 formal complaints from recipients of unsolicited offensive mailings. Citizens also complain about the lurid books, photographs, and magazines sold at newscounters everywhere.

One reason that our past efforts have proved inadequate is the difficulty in winning court approval of antipornography measures. For example, our statute providing criminal penalties for anyone sending obscene materials through the mail has proved difficult or impossible to enforce because the courts have construed the term "obscene" in accordance with the definition formulated by the landmark Supreme Court decision in the 1957 Roth against United States case. That decision said the test of obscenity was "whether, to the average person applying contemporary community standards, the dominant theme of the material takes as a whole appeals to the prurient interest" in a manner so as to be patently offensive. The practical effect of this test has been to open the mails and newsstands to practically any material, including that which many persons would describe as pure hard-core pornography.

The Supreme Court's purpose has been made clear in other cases reviewing and reversing lower court findings of obscenity—it believes that the Constitution's "free speech" clause gives the widest protection to the freedom of adult speech and communication. While seeking to accomplish this goal, however, the Court has, in effect, allowed pornographers to deal injury to a group who are not "average persons"—our children. And it is precisely this group that has been the prime object of the smut peddler's interest.

Investigation of the staggering number of complaints made by citizens against unsolicited obscenity received in the mails has disclosed that most come from parents of school-age children. Indeed, the pattern of unscrupulous publishers and dealers has been known for years: they attempt to "hook" young people on smut at as early an age as possible, then continue to pander to their newly aroused interest as they grow to adulthood. The unconscionable effect of this filthy material on the emotional development of our youngsters is ignored by the smut merchants, who often develop mailing lists of children from responses to innocent advertisements for stamps, model airplane kits, and toys.

Clearly, we cannot allow these callous pornographers-for-profit to continue polluting the minds of our youth. I offer today legislation to provide postal authorities with expanded power to protect school-age children from this traffic in filth.

My bill is similar to legislation, H.R. 2522, which has already been introduced by Mr. CAHILL of New Jersey and other colleagues. It is based on a new approach, one which circumvents the constitutional arguments involving adult freedom of speech by applying safeguards only to children.

My bill would prohibit mail-order sales of obscene materials to persons under 16 years of age. It also would make the unsolicited mailing of hard-core pornography, or offers to sell such material, to a family with children under 16, a Federal crime punishable by fine and jail sentence.

To avoid difficulties in the definition of "obscenity," my bill incorporates specific categories of depictions banned under the legislation. Since the bill does not affect mailings to adults, it also averts this area of judicial conflict; in the past, the Supreme Court has recognized the right of parents to direct the rearing of children in the structure of our society.

In sum, this legislation is centered solely on the protection of our children from the prurient wares of smut peddlers who now flood the mails with their filth in apparent immunity from our best efforts to stop them. I believe that Congress and the courts can accept this as an effective and constitutional approach to the problem which does not limit freedom of speech or expression in the adult world.

HISTORY OF NEGROES IN CONGRESS

(Mr. FASCELL asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. FASCELL. Mr. Speaker, in a time when all of us are trying to eliminate the remaining vestiges of racial discrimination in our Nation, it is instructive to look back into history from time to time, to get a better perspective of the present. In that connection, I am pleased to note that the first Negro claimed membership in the Congress a century ago this year.

An interesting and informative article on the subject of Negro membership in the Congress of the United States was published in a recent edition of Roll Call, the newspaper of Capitol Hill, published in Washington, D.C. As the article points out, it was 100 years ago on February 27, 1869, that John Willis Menard, a Negro from Louisiana, stood up on the floor of the House of Representatives and stated his case for being seated. Another candidate and he both claimed victory in a special election, and although neither was seated, Menard addressed the House in a plea for his seat. The historic event marked the first noteworthy effort to gain Negro representation in Congress—a goal that was achieved 1 year later, in 1870, by Senator Hiram Revels, of Mississippi.

A table accompanying the article lists States which have sent Negroes to Congress, and the number of Negroes who served. For the Senate it lists two from Mississippi and one from Massachusetts. In the House it lists: California, one; Missouri, one; Illinois, three; Michigan, two; Ohio, one; Pennsylvania, one; New

York, two; Louisiana, one; Mississippi, one; Alabama, three; Georgia, one; Florida, one; South Carolina, eight; North Carolina, four; and Virginia, one.

The Representative from Florida, Josiah Thomas Walls, served in this body from March 4, 1873, to April 19, 1876, in the 42d and 43d Congresses. Born of very poor parents in Winchester, Frederick County, Va., on December 30, 1842, Mr. Walls had limited opportunity for schooling but because of his determination managed to receive the fundamentals of an education in the common schools of the area.

Moving to Florida at the close of the Civil War, Mr. Walls developed a truck-farming business, and, in addition, joined the various Republican groups operating in the State, to learn as much about politics as he could. In 1868, he was a delegate to the State constitutional convention and, later in the same year, he was elected to the State house of representatives. After 1 year in this body he ran for the State senate and was elected for a 4-year term.

In the election of 1872, he was elected to the 42d Congress. His election to the 43d Congress was contested by Jesse J. Finley, and for nearly a year Mr. Walls fought unsuccessfully for his right to be seated. On being succeeded by Mr. Finley, Mr. Walls resumed his occupation as a truck farmer. He continued to participate in his party organization by playing an important role in determining party nominations. Mr. Walls died in 1905.

The article follows:

A CENTURY AGO THE FIRST NEGRO CAME TO HILL

(By L. Robert Davids)

It was 100 years ago on February 27, 1869 that John Willis Menard, a Negro from Louisiana, stood up on the floor of the House of Representatives and stated his case for being seated. He had run for election to fill an unexpired term in the 40th Congress. Victory was claimed by Menard and by another candidate. Neither was ever seated, although Menard addressed the House in a plea for his seat.

This historic event marked the first noteworthy effort to gain representation in the National Congress. It also launched the first of two sharply contrasting periods of service in Congress for the Negro. The first period ran from 1870 to 1901 and consisted of rather indefinite tenure for 20 Representatives and two Senators. All were Republicans from the Southern States of the old Confederacy.

No member of the colored race served in Congress 1901-28, but service was resumed in 1929 and has grown with gradually increasing numbers to the present time. Representation in this period was from non-Southern States, was primarily Democratic, and resulted in stable and continuing membership.

The groundwork for entry of Negroes into Congress was laid quickly after the Civil War by the adoption of the 13th, 14th, and 15th Amendments to the Constitution. The 13th Amendment, adopted in late 1865, formally abolished slavery; the 14th, adopted in 1868, gave Negroes citizenship in the U.S. and in the States where they resided; and the 15th, adopted in 1870, gave Negroes the right to vote.

By the late 1860's, some Negroes had gained seats in the legislatures of various Southern States. It was there that they obtained the little legislative experience they could before competing in elections to the National Congress.

Willis Menard had served only briefly in the Louisiana legislature. Born in Illinois in 1838, he had won an appointment in the Bureau of Emigration in Washington in 1862. This marked the first time that a Negro had held a clerkship in the Federal Government. After the Civil War he went to New Orleans where he served as Inspector of Customs. In 1868, the Representative of the Second Congressional District died, and Menard, 30 years old, decided to run in the special election. The election was held November 3 for the term ending on March 3, 1869. Menard apparently won over Caleb Hunt and was declared elected by the authorities of the reconstructed state.

When Congress assembled in Washington in December 1868, Hunt challenged Menard's claim to the vacant seat. The issue was turned over to the Committee on Elections which wrestled with the matter until it came to the House floor on February 27, 1869. There was lengthy debate over the matter and it was finally decided that both candidates would be given permission to address the House for 15 minutes. Menard, in this historic appearance, made an eloquent but moderate statement of his qualifications, starting off with "I wish it to be well understood before I go any further that in the disposition of this case, I do not expect nor do I ask that there shall be any favor shown me on account of my race or the former condition of that race."

Hunt declined the offer to speak. Eventually the matter was put to a vote. The Representatives voted 137 to 41 not to seat Hunt and 130 to 57 not to seat Menard. There was less than a week left of the 40th Congress, so it was agreed that the two would split the $5,000 salary for time and expenses contesting the seat.

Less than one year later, the Senate was confronted with its first challenge from a Negro candidate. This was Hiram Revels of Mississippi. He was a graduate of Knox College, a gospel preacher in the African Methodist Episcopal Church, and a State Senator. In January 1870, "the nation stood with its mouth wide open" when he was elected to the Senate seat last occupied by Jefferson Davis.

As the first member of his race to enter Congress, he had numerous social hurdles to overcome as well as one legal obstacle. That was the charge that he had not been a citizen the required nine years—dating from 1868 when citizenship was granted Negroes. However, he had the public endorsement of President Grant and, more importantly, he had the strong support of Charles Sumner of Massachusetts, the dominating figure in the Senate at that time. After a long and sometimes bitter debate, he was seated on February 25, 1870, almost a year to the day that Menard was refused his seat.

The next Negro elected to the Senate was Pinckney B. S. Pinchback, of Louisiana. He was Lieutenant Governor and served for a time as Acting Governor in the chaotic days of reconstruction in that State. Pinchback was elected to the Senate for the term beginning March 4, 1873, but there was another claimant and the seat was left vacant for more than three years. During this hiatus, Pinchback, also contested for a House seat, but was turned down. Eventually, his Senate bid was also defeated, although he did receive part of the Senate salary during the long contest.

In 1874, Blanche Bruce of Mississippi had the unusual distinction of being elected, being seated without a contest, and then serving a full six-year term in the Senate. Senate elections then were determined by the State legislatures, and Southern legislatures were never really under Negro control in the Reconstruction period. This was the primary reason that only three Senators were elected and two served during this period.

Only in South Carolina was there a semblance of Negro political dominance, brief as it was. That State sent eight Negroes to Congress, four at one time in 1873–75. Joseph Rainey was the first to serve in the House, taking his seat December 12, 1870; and he served the longest—to 1879.

The only House member from Mississippi was John R. Lynch. He was only 25 and the youngest member when he entered Congress in 1873. He served three terms. In 1884, long before Edward Brooke had a similar distinction, he presided as temporary chairman of the Republican National Convention in Chicago. He died in 1937 at the age of 92, the last survivor of the 43rd Congress and the oldest of all the former Negro members of Congress. He is buried in Arlington National Cemetery, based on his service in the Spanish-American War and 12 years thereafter.

Another Representative who had earlier military experience was Robert Smalls of South Carolina. He served as a riverboat pilot for the Confederates during the first part of the Civil War. However, he ran a blockade and escaped with the vessel to the North. He served with the Union Navy until the end of the conflict, attaining the rank of captain.

The background and capabilities of the first period members of Congress varied greatly. A number of them had been slaves or were from slave families. Some had mixed blood including two who were sons of slave owners. On the other hand, Senator Revels was a freeman of a white mother and a father who was Indian and Negro. When he broke the color line in Congress in 1870, he did it for more than one minority.

John Langston, of Virginia, was that State's only Negro in Congress. His mother was Indian and Negro and his father Caucasian. Graduated from Oberlin College in 1849, he practiced law in Ohio for 13 years. He then became professor of law and later Vice President of Howard University in Washington. In addition to one term in the House, he served 8 years as Minister Resident and Consul General to Haiti.

While there were some Negro legislators who had little education and lacked essential qualifications for their duties, there were others like Langston, who were well educated as freemen in the North. Two early period legislators were born in the North and became in a sense "carpetbaggers."

One of the latter was Robert Brown Elliott, born in Boston in 1842. His parents were from the West Indies and he was educated in Boston, Jamaica, and England, graduating from Eton College. Law was his chosen profession, but after the Civil War, he got into the newspaper business in Charleston, South Carolina. From there he went into Congress 1871–74. A brilliant orator, he frequently tangled in debate with Southern Representatives including Alexander Stephens of Georgia, Vice President of the old Confederacy.

James O'Hara was born in New York City but went South after the war. He represented North Carolina for two terms in the House. He proposed a bill to give Negroes equal rights with whites in Washington restaurants, but the bill was not acted upon. Nevertheless he was rated a good legislator.

He was defeated in 1886 by Furnifold Simmons and for the 1887–89 session of Congress there were no Negroes in Congress. Three came back in the next session, but the times were changing and the Whites were coming back in full control in the South. Finally there was only one left, Rep. George White of North Carolina, who frequently referred to the fact that he represented not just a district in North Carolina but nine million Negroes across the nation. A graduate of Howard University, he was a race-conscious, militant politician and he could see what was happening. He was defeated in the 1900 election and as he neared the completion of his term on January 29, 1901, he spoke with some

bitterness but with great feeling and perceptive prophecy:

"This, Mr. Chairman, is perhaps the Negroes' temporary farewell to the American Congress; but let me say, Phoenix-like he will rise up some day and come again. These parting words are in behalf of an outraged, heart-broken, bruised, and bleeding, but God-fearing people, faithful, industrious, loyal people—rising people, full of potential force. . . . The only apology that I have to make for the earnestness with which I have spoken is that I am pleading for the life, the liberty, the future happiness, and manhood suffrage for one-eighth of the entire population of the United States."

The absence lasted somewhat longer than Rep. White anticipated and he passed away in 1918, a full decade before a member of his race was returned to Congress.

With the conservatives once again reigning supreme in the South, there was not a single Negro in the state legislatures by 1902. Laws were legislated and other devices were used which essentially disenfranchised the Negro. These political measures were followed by the resignation of those institutions which had been desegregated during Reconstruction, including state universities and public facilities. The result was mass migration to the Northern states in the period a few years before World War I and some time thereafter.

One example of this migration was Oscar DePriest. He was born in Alabama but moved to Kansas and then to Illinois where he established a painting and decorating business. He was the first Negro elected to the city Council of Chicago and he served as a City Commissioner 1912–22. In 1928 he was elected as a Republican from a predominantly Negro district to the House of Representatives.

Mr. DePriest was the first Negro in Congress in 28 years and as far as social barriers were concerned, it was like starting all over again. Southern Congressmen objected even when Mrs. Hoover invited Mrs. DePriest to the White House for tea. But the new Representative did not shrink from what he considered his primary task to improve the lot of his people. He invaded the South to speak for the anti-lynch law and was taunted by the KKK. In his six years of office, the tall, white-haired legislator appointed several Negroes to the U.S. Military Academy and took numerous other steps to integrate members of his race into American society.

In 1933 Franklin Roosevelt swept into office on the wings of a voter coalition that included numerous minority groups. In 1934 a Negro Democrat challenged DePriest in Illinois First District and defeated him. This was Arthur Mitchell, who also had migrated north from Alabama. Once the office boy for Booker T. Washington at Tuskegee Institute, he received his education at Columbia and Harvard. From his law practice in Chicago he went to Washington as the first Negro Democrat in Congress.

A great supporter of FDR, Mitchell said he wanted "to help this grand President of ours feed the hungry and clothe the naked and provide work for the idle of every race and creed." He declared "the Negro is in this country to stay. We have to live side by side and learn to dwell together in peace."

Mitchell, who died less than a year ago, served until his retirement in 1943. He was succeeded by William Dawson in what was becoming a Negro Democratic stronghold in Chicago. But for 16 years it was the only district in the nation sending a Negro to Congress. Finally, in 1945 a second was added in Adam Clayton Powell of New York City. Then, as Negroes continued to flood the urban centers of the North and California, Representatives were sent to Washington from Detroit, Philadelphia, Los Angeles, and a second one from Detroit. All were Democrats.

But then in 1966, there was a happening in Massachusetts that didn't fit the political pattern in any respect. Edward Brooke, a Republican, was elected by popular vote to the Senate from a State that had a minimal Negro population. In 1968 the pattern resumed with Democratic Representatives elected from St. Louis, Cleveland, and a second from New York City. There was a new dimension in the New York situation, however, as Shirley Chisholm became the first female Negro elected to Congress.

The second-period Negro Congressmen experienced unusual political stability in their districts. Over the last quarter century, none lost an election. One, Rep. Powell, was elected (twice) but not seated during the 90th Congress. When he was seated earlier this year, the total number of Negroes in Congress reached ten. Many references have been made that this is the greatest number since Reconstruction days; actually, it is two more than were seated in 1875–77, the high point of the earlier period.

Negroes also are gaining seniority. Rep. Dawson is serving his 27th consecutive year in the House. Nearly 83, he also is the oldest of all members of the present Congress. As Negro voter registration is increased and as urban organization is improved, it is expected that Negro representation in Congress will grow. Fulfillment will not come, however, until there is once again representation from heavily Negro populated areas of the old Confederacy. Then the dream of Willis Menard to enter Congress 100 years ago will be fully realized.

States which have sent Negroes to Congress

House:	
California	1
Missouri	1
Illinois	3
Michigan	2
Ohio	1
Pennsylvania	1
New York	2
Louisiana	1
Mississippi	1
Alabama	3
Georgia	1
Florida	1
South Carolina	8
North Carolina	4
Virginia	1
Senate:	
Massachusetts	1
Mississippi	2

CONSUMER PROTECTION REQUIRES ACTION BY OFFICE OF CONSUMER COUNSEL

(Mr. FASCELL asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. FASCELL. Mr. Speaker, during the the past few years, we in the Congress have enacted a number of landmark measures aimed at insuring fair dealing in the American marketplace. The American consumer is now entitled to greater protection against flammable fabrics, to more uniformity in the packaging of foodstuffs, and to increased automobile safety. Soon he will be entitled to full disclosure of the cost of his credit transactions. These examples only highlight recent congressional activities in the interest of consumer protection. In the 91st Congress, additional measures will be taken to strengthen the consumer protection machinery of the Federal Government.

In the executive branch of our Government, there is an office already established, although little known, which holds great promise for what can be done to protect the consumer under existing laws. That is the Office of Consumer Counsel, within the Department of Justice.

First established in 1968 by President Johnson, the Office of Consumer Counsel has the potential of becoming an important coordinating force in the overall Federal consumer protection program. Currently, more than 30 different Federal agencies are engaged in activities which, in one way or another, affect consumer interest. The need for an active coordinating office to concern itself with this mass of activities is readily apparent, and I believe that the objectives of the Office of Consumer Counsel can well fill that role.

I have therefore written to the Attorney General, requesting his advice on the staffing and functions which he plans to assign to that office.

The text of my letter follows:

CONGRESS OF THE UNITED STATES,
Washington, D.C., March 24, 1969.

Hon. JOHN N. MITCHELL,
Attorney General,
Department of Justice,
Washington, D.C.

DEAR MR. ATTORNEY GENERAL: The 90th Congress, as you know, probably surpassed all previous Congresses in its concern for consumer protection. The 91st Congress promises to challenge that record. In keeping with this concern, President Johnson, early in 1968, announced that he had established within the Department of Justice the Office of Consumer Counsel "to work directly under the Attorney General . . . and to serve the consumers of this land."

The potential capabilities of that office to effectuate a more coordinated and effective Federal consumer protection program are great. In a statement to the Federal Trade Commission Hearings on National Consumer Protection on December 4, 1968, former Consumer Counsel Paul G. Bower enunciated some of the goals and functions which that office may serve. These include:

1. Coordinating the consumer protection activities within the Department of Justice including prosecution under the Mail and Wire fraud statutes and security frauds.

2. Coordinating consumer related activities of the Federal agencies and assisting in developing policies for the Executive branch relating to consumer affairs.

3. Representing consumer interests before the Federal regulatory agencies and, when appropriate, in the courts.

4. Developing closer liaison with State and local consumer protection agencies.

I was encouraged by your remarks to the Fordham Law Alumni Association on March 8 wherein you stated that consumer protection is one of the principal priorities of your Department.

As Chairman of the Legal and Monetary Affairs Subcommittee of the House Committee on Government Operations, I am interested in the operations of your Department. I request that you submit to this Subcommittee your comments for the staffing and functions of that office, including plans that you may have for filling the vacancy that now exists in the Office of Consumer Counsel.

Sincerely yours,

DANTE B. FASCELL,
Chairman.

NATIONAL ORGANIZATION FOR WOMEN—NOW—ADOPTS LEGISLATIVE GOALS FOR 1969

(Mr. RYAN asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. RYAN. Mr. Speaker, at the national conference in Atlanta, Ga., December 7 and 8, 1968, the National Organization for Women—NOW—adopted a comprehensive legislative program for 1969 intended to advance the status of women and enable them to more fully contribute their talent, skills and ideas to the Nation.

NOW is a national civil rights movement, consisting of dedicated men and women who are working to bring women into equal partnership with men in the mainstream of American society.

NOW has described its purpose as follows:

The organization is devoted to the realization of the full human potential of women—who comprise over 51% of our population, but are almost 'invisible' in our industrial leadership, our political life, our national leadership and in the decision-making levels of government where the destiny of our nation is determined.

NOW has members in every State—and also in the Virgin Islands. The officers are: chairman of the board: Dr. Kathryn Clarenbach, University of Wisconsin professor; president: Betty Friedan, New York author—"The Feminine Mystique"—vice presidents: Muriel Fox, New York public relations executive, and Aileen Hernandez, of San Francisco, formerly an EEOC commissioner; secretary: Eliza Paschall, Atlanta civil rights leader; and treasurer: Inka O'Hanrahan, San Francisco biologist.

The proposals were recommended by Jean Faust, coordinator of the national legislative task force. After a discussion meeting with members of the task force from all over the United States, during which the final proposals were drafted, the program was presented to a session of the national conference at which further proposals were added and the final program was adopted.

Cochairmen of the National Legislative Committee for 1969 are Jean Faust—former first president of the New York chapter, currently chairman of the board—and Barbara Ireton, former president of the Washington chapter. Both were also elected members of the national board of directors at the Atlanta conference.

NOW officers and directors will be in Washington on March 29 and 30 for a national board meeting. On Monday, March 31, a legislative conference will be held, to which all Members of Congress have been invited. NOW members are also planning visits to their own legislators and to the chairmen of committees which are considering legislation pertinent to our program.

NOW's eight-point legislative program for 1969 follows:

NOW LEGISLATIVE PROGRAM

I. Equal rights amendment:

"Equality of rights under the law shall not be denied or abridged by the United States or by any State on account of sex." NOW supports this amendment *without change.*

II. Equal opportunity in education:

(a) There should be no discrimination on the basis of sex in schools that receive federal funds.

(b) Award of scholarship, fellowship and other benefits should be made without regard to sex.

III. Equal opportunity in employment:

(a) Enforcement of Title VII, Civil Rights Act of 1964.

(b) Enforcement of federal contract compliance.

(c) Equal treatment for women in federal training and job opportunity programs, such as OEO, MDTA, and the Vocational Education Act.

(d) Extension of Fair Labor Standards Act and Equal Pay Act to cover all workers.

(e) Child Care Facilities for Working Parents.

(f) Protection of Employment Rights during Maternity. Women should receive maternity leave as a form of social security and/or employee benefit (similar to sick leave or job security because of the draft for men). Women must be ensured the right to return to their jobs within a reasonable time after childbirth, without loss of seniority or other accrued benefits.

IV. Repeal of abortion laws.

V. Review of income tax laws, social security laws, and retirement plans:

(a) Eliminate tax provisions that discriminate against single persons.

(b) Allow deductions for child care, whether or not child may be listed as dependent.

(c) Social security laws should be revised to eliminate discrimination against working wives.

(d) Social security laws should be revised to eliminate discrimination against divorced women.

(e) Retirement and Pension Plans should be revised to eliminate discrimination on the basis of sex.

VI. Identifying and reporting on sex discrimination:

Agencies should be established on all governmental levels to investigate, study and report on sex discrimination in all areas of life. NOW supports the Griffiths bill (HR 837) to broaden the Civil Rights Commission mandate of studying and reporting on discrimination based on race, color, religion or national origin to include sex.

VII. Including women in appointive positions in Government:

There should be legislation to include women on all commissions, boards and other appointive bodies at all governmental levels.

VIII. Nondiscrimination in public accommodations:

"Sex" should be added to Title II of the Civil Rights Act of 1964.

SABMIS, THE SOVIETS, AND MARITIME STRENGTH—ADDRESS BY CHARLES F. DUCHEIN, PRESIDENT, NAVY LEAGUE OF THE UNITED STATES

(Mr. BLANTON asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. BLANTON. Mr. Speaker, on March 13, 1969, Gen. Charles F. Duchein, U.S. Marine Corps Reserve, and president of the Navy League of the United States, delivered an address to the Military Order of World Wars and the Memphis Council of the Navy League in Memphis, Tenn. I would like to submit the text of this speech in the CONGRESSIONAL RECORD for the primary purpose of giving recognition to my friend and colleague, WILLIAM R. ANDERSON, former commander of the *Nautilus* on its historic cruise under the North Pole. The text of this speech gives due tribute to Congressman ANDERSON and his accomplishments to Tennessee, the Nation, and the world. While the entire text may not reflect my complete philosophy, I deem it a great honor to endorse the comments concerning my esteemed colleague.

Mr. Speaker, under unanimous consent, I include a copy of General Duchein's remarks in the RECORD at this point and commend it to our colleagues for their information:

SABMIS, THE SOVIETS AND MARITIME STRENGTH

(Address by Charles F. Duchein, president, Navy League of the United States, before the Military Order of World Wars and the Memphis Council of the Navy League, Memphis, Tenn., March 13, 1969)

For my money, Tennessee is a great maritime state, just as America is a great maritime nation and that is why I am particularly pleased to address this joint meeting of the Military Order of World Wars and the Navy League in Memphis tonight.

Almost equidistant from the two great oceans, many of the citizens of your great state may consider the seas to be distant from your daily lives. Not on your life—the Polaris revolution changed all of this—Tennessee, just as California, Florida and Minnesota, now borders on the great ocean of the world. Tennessee has become a center of the world strategic struggle for mastery of the oceans.

All of the great land mass of planet Earth can now be dominated from the sea. The long-range, nuclear-tipped, submarine-based ballistic missile, both American and soon those of the Soviets, has brought us all into the realm of the oceans in a security sense. From an economic standpoint, our direct dependence on the oceans has been the case ever since our early history.

Living as you do on one of the great rivers of the world, the Mississippi, your Memphis friends know precisely what I mean. Hopefully, I can spark your interest in this beautiful "Volunteer State" to the wonders of the world of water in an intellectual sense, that will add depth to the national oceanic educational effort.

We are living in a turbulent world. The turmoil, tension and swift changes that characterize our lives are gradually leading us to the world ocean to seek solutions for our perplexing problems. Unfortunately, we are not moving swiftly enough. Most of our citizens are land bound in their thinking; we tend to be a country of land-conscious citizens. Consequently, there is a critical need for education, particularly oceanic education. An oceanic doctrine, a maritime concept, is the crux of capitalizing on the oceans of the world. But the concept, the doctrine, the policy and the strategy of the seas do not come naturally to most Americans.

Since the Navy League is an educational organization, understandably, I place considerable faith in the knowledge of the oceans. In reorienting our thinking to seaward—to gain the understanding of the importance of an oceanic guide for our policy and program formulation—the defense dialogues must pit the view of the oceans against that of the land. This is the only way to gain balance in the planning process.

I cite *Polaris* as an example, rather deliberately, not to foster fear in highlighting that Memphis has already become a prime target for nuclear destruction from the sea, but rather to bring geography into the reality of today's modern world. As free world leaders, we had best be realistic about the threats to our future. Seven-tenths of the world is water and more and more this world of water will come into play in international affairs. To capitalize on the oceans, the United States must place priority on the prosperity producing activities of the ocean.

Today there is a great debate in the Congress on the antiballistic missile system Sentinel. The implications of the dialogue are ominous. There are far reaching consequences in the decisions that our Commander-in-Chief, President Nixon, must make. The citizens of Tennessee have a stake in this and I am happy to realize that a Tennessee Congressman has assumed the leadership and is in the forefront—spearheading a seabased solution.

The strategic importance of the North Pole quite probably was dramatically driven home to many of you friends from Tennessee by this courageous naval pioneer from the "Volunteer State." His dramatic under-the-ice cruise to the North Pole in command of *Nautilus* provides a heroic page in American history. It paved the way for an achievement of unprecedented strategic strength for the preservation of the Republic. Captain Anderson's historic cruise in a very true sense led to what we now know as the Polaris revolution, giving America a greater sense of security than was attainable when the nation relied preclusively on fixed land-based strategic arms.

Today, Captain Anderson is providing the same kind of enlightenment and determined action in the Congress. He is determined to give even greater defensive strength to the arms of the nation. I speak of Congressman Anderson's stand on Sabmis, the seabased antiballastic misssile intercept system. Through his understanding of the oceans to build our strategic strength, he is providing perspective in the ABM debate that has reached a white heat in recent weeks. His congressional leadership on the key issue has provided the Navy League with reinforced resolve in the conduct of its oceanic educational effort. It seems fitting that I pay appropriate tribute to Bill Anderson in his home state of Tennessee during my pleasant Memphis visit, as we discuss the vast opportunities unfolding for the nation through oceanic progress.

For Sabmis is more than a defensive strategic system. It, together with Polaris-Poseidon offensive systems, can provide the operational cornerstone for the new grand strategy of the oceans needed by this nation to protect and preserve the Republic and to prosper economically through increased exploitation of the world ocean. But were it not for his articulate efforts in Congress, the seabased ABM never would have been interjected into this defense dialogue and Sabmis is of singular significance to the nation. I urge that each of you study the Sabmis concept as a means of moving nuclear wars to sea, away from our population centers of America.

Both Polaris-Poseidon and Sabmis are but a start toward reorienting our defenses to seaward. There are many other ways of utilizing the oceans of the world in our interest. The crux is to gain an understanding by the citizens and their representatives in Congress who, unfortunately, are generally land-conscious in their thinking. This is the role of the Navy League.

For example, as the peace talks in Paris move along with no apparent substantive results, and American casualties mount in Viet Nam, we begin to realize the importance of strength in solving our complex military problems in our worldwide confrontation with the Communist world. As I have said on many occasions in my talks around the country, we have never won anything when we dealt with the Communist world from a position of weakness. They are tough and determined realists and they respect only strength.

In Cuba where our strength showed, we won. We backed them down and without firing a shot! We talked with strength. Our will and our determination showed in the naval strength that provided presence and enabled President Kennedy to impose a maritime blockade. This lesson was impressive.

That is why I am encouraged that our President and his new Administration give every evidence of a returning to the harder line to insure that our battlefield victories in Viet Nam will not be lost at the conference table.

This again brings us back to the importance of water in our worldwide actions. We have led with our infantry too long. The sterility of our strategy shows when we bog down in our efforts to defeat half a nation with half a million American men in distant Southeast Asia.

The "Achilles Heel" of this Communist effort is their sea lines of communication. We should know this. Over 98% of the supplies that keep the Viet Cong and North Vietnamese fighting arrive in ships and are unloaded in the Haiphong Harbor complex. Closure of this port complex would bring the Hanoi delegation to the conference table to talk on our terms in very quick order. The Joint Chiefs of Staff understand this. They recommended the closure of Haiphong but they were overridden by those who do not understand the significance of sea lines of communications in supporting any war effort. I pray that unless an acceptable solution in Viet Nam is brought about quickly, the President will place high priority on the closure of Haiphong Harbor to bring this seemingly never-ending war to a successful conclusion promptly.

This oceanic action would be the most positive the United States can take to restore the peace. Had our nation understood the maritime concept better, I am confident that the war would have long since been terminated.

This makes me wonder whether we as a nation realize how dependent we are on the American Merchant Marine from the standpoint of security and also for long-term prosperity.

Over 98% of the beans, bullets and jet fuel is carried to our military forces in Southeast Asia; and the Merchant Marine deserves great credit. But another "hot spot" somewhere else would stretch our ship elastic limit beyond the breaking point. For this reason, watching the Middle East tinder box starting to flare up again is not only a nightmare for our strategic planners, it is a warning to remind us of our global responsibilities and requirements.

Our fast moving 20th Century industry depends increasingly on strategic materials carried from overseas in ships. The burgeoning trade along the sea lanes of the world affords the most inviting possibility for economic growth in our history.

As I see it, the problem boiled down to basics is an educational one. Yes, education—and the aggressive merchandising of the American maritime product. We must take a page out of the bold aerospace industry's promotional book to gain a number one world maritime position.

Speaking of modern methods of merchandising, Jack Gilbride, president of Todd, and a good friend of mine, and I must say one of the most progressive American shipbuilders, is telling the nation through a fine program of educational communications—"you can't walk on ¾ of the Earth's surface." How strange that the American people and their government, at this late hour, need such elementary oceanic education; but, unfortunately, they do. No, you can't walk on the water, but there is gold in the oceans of the world—and strength and security. Bold imaginative plans are needed now to tap the oceanic resources.

I watched the Apollo 8 launch at Cape Kennedy; what a marvelous experience! While catching my breath as I stared at the rocket soaring into space, to myself I humbly thanked Stalin, Khruschev, Brezhnev and Mikoyan. Who launched Apollo 8? I would say, unquestionably, "Sputnik". The Soviets touched a sensitive American nerve—we can't stand a second place position—and that is good. The psychological shock of Sputnik's first spin in space awakened this nation. And Apollo 8, if it did nothing else, showed the tremendous American potential to produce, to create, to think—it showed the strength of our will and our determination and it came at a time when the world was beginning to wonder.

What we need now is some sort of shock treatment; Americans will then demand that we build our national maritime prowess to the strong, modern, competitive position world conditions dictate. Actually, the Russian revolution at sea provides the same competitive challenge. Though hardly as dramatic, the exploding Soviet maritime strength has far more ominous political, economic and military implications.

Focusing on the Red revolution at sea, the central significance of the competitive Merchant Marine stands out. How do we stack up? Four out of five of our merchant ships are of World War II vintage. But not Soviet ships—four out of five of their ships are less than 10 years old. While the Soviet Union builds better than 1,000,000 tons of merchant ships each year, 448 ships this year, for example, we build 48. In point of relative priorities, in 1965 the Soviet government spent more than $600 million on merchant ship construction, in the same year we spent a mere $150 million. Her vigorous ship construction program already has given her 10.4 million tons of merchant shipping and 1400 ships, with a projection of 27 million tons by 1980. Having already passed us by the end of this year, unless the trend is reversed, the Soviets in ship count will knock us out of our fifth place position as a merchant power.

For the past 18 months, I have toured the greater part of this nation and have talked largely about my reaction to the way we have conducted the Viet Nam War in context of global strategy. And I might add, I have been somewhat critical. Had the maritime concept been understood and accepted, Haiphong Harbor many months ago would have been blocked to the Communist ships that have carried the preponderance of arms used against our men in combat. As a consequence, the war would have long since been won or at least we would have talked on our terms, rather than from a pusillanimous position at the peace table confrontation.

What has impressed me most has not been the handling of the war by our political leadership, but the spirit of our American fighting men—the youth of our nation—in the fox holes of this distant battlefield.

From the youthful American viewpoint of our forces at sea, there is room for much optimism in the prospect for the oceanic future. Make no mistake, America's destiny is oceanic.

To you friends in Memphis, I propose for your consideration the following five maritime measures to give our oceanic power a preeminent world position.

First, and foremost, the formulation of national maritime policy providing positive incentive to gain a competitive maritime position on the oceans of the world. The new Administration, with a minimum of delay, must provide national policy, undergirded by an oceanic doctrine, to guide our government in the military and Merchant Marine and oceanic programs of a scientific, technological and educational nature. A platform plank provides for such.

Second is strategy. Our nation must orient its national strategy to the oceans of the world, just as the Kremlin has done in recent years. To do so will require the construction of many more naval and merchant ships than we are producing at present.

My third point is, therefore, ship construction. America must go after the merchant marine market by building a minimum

of 100 ships a year for at least the next decade.

Fourth, Oceanic Education must be fostered in our school systems to give our youth as good a subject grounding in the seas as they now receive on the land environment. The Sea Grant College program on the college and university level must be pursued with the utmost vigor to mobilize the best minds of this nation—the scientists, the scholars, the student—in the pursuit of oceanic solutions to the pressing problems of state. I know I don't have to remind you that in recent history when great powers lost control of the seas, they lost their greatness. Consider Spain after the defeat of the Armada, France after Trafalgar, Japan after Midway, England after the exhaustion of two wars.

My fifth point is a proposal I have previously made for the establishment of a Maritime Manhattan Project that gives the magnitude impetus to the maritime research programs largely neglected of late. My concept follows along the same lines as the Maritime Manhattan Project that produced the atomic bomb. Its purpose would be to give a sea based profile to the revolutionary technological advances this nation is capable of achieving in our 20th Century. Obviously, I am thinking in terms of the swiftest, most modern, streamlined merchant and naval ships, the kind that can compete and maintain a strategic mastery of the environment of the oceans.

A single sentence sums up my proposal, "The security and prosperity of the United States and its allies depend increasingly on the military, economic and political exploitation of the world oceans." If we pursue this program that I propose with vigor, vision and determination, I am confident that our flag will fly with pride worldwide in recognition of American supremacy of the high seas and our mastery of the world ocean.

The voice of a soft spoken, but articulate, Representative from Tennessee is leading the way for this transformation and we of the Navy League are behind him 100%. I hope you are also, for this nation desperately needs his kind of maritime leadership.

SOUTH-WEST AFRICA

(Mr. RARICK asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. RARICK. Mr. Speaker, the U.N. continues to beat its drums of prejudice and hate against our friend, South Africa by passing some Security Council resolution which "does not commit the Council to the narrow path of mandatory sanction." Possibly the U.N. is only interested in the world community opinion.

Most observers acquainted with the U.N.O.'s propaganda techniques wonder where the sanctions are against Russians being in Czechoslovakia and the British being in Anguilla.

At most, the action by the United Nations can be interpreted as a mop-bucketful of officious intermeddling in a civilized country at peace. And who can disagree with the reply by the South African Government that it would pay no more attention to this resolution than it did to previous mutterings against the peace and security of its people and protectorate?

The United Nations has proved again that it is nothing but an assembly of loud mouths who know they cannot back up their threats unless they have U.S. boys and equipment and U.S. taxpayers money.

Mr. Speaker, I place two news clippings concerning South-West Africa and Art Buchwald's column at this point in the RECORD:

[From the Washington (D.C.) Post, Mar. 21, 1969]

SOUTHWEST AFRICA RESOLUTION PASSES U.N.

UNITED NATIONS, March 20.—With U.S. support, the U.N. Security Council, called on South Africa today to withdraw immediately from the neighboring territory of South-West Africa.

The 15-nation Council adopted a resolution to that effect 13–0, with two abstentions. Britain and France abstained because they believed the United Nations cannot insure its implementation and it would only encourage false hopes.

It was the first Council action to put into effect the General Assembly's 2½-year-old declaration that South Africa's League of Nations mandate to govern South-West Africa, a former German colony, was terminated.

Before the vote, U.S. Ambassador Charles W. Yost said the United States was able to support the resolution "because it wisely does not commit the Council to the narrow path of mandatory sanctions."

Many black African nations have been demanding at least economic sanctions against South Africa for defying the U.N. declaration. Zambian Ambassador Vernon Johnson Mwaanga, who introduced the resolution, contended it was broad enough to encompass mandatory sanctions.

[From the Washington (D.C.) Post, Mar. 22, 1969]

SOUTHWEST AFRICA

UNITED NATIONS.—South Africa indicated it would pay no more attention to a U.N. Security Council Resolution Calling for it to withdraw from South-West Africa than it has to a similar demand from the General Assembly.

South Africa holds that the General Assembly acted illegally Oct. 27, 1966, when it declared that South Africa's League of Nations mandate over the big territory had been terminated.

ALL HAIL PLUCKY LITTLE BRITAIN FOR HUMBLING MIGHTY ANGUILLA

(By Art Buchwald)

The only bright spot in the news these days is what has happened in Anguilla. In one of the most amazing reversals in modern military history, tiny, helpless, and, up to now, ineffectual Great Britain defeated the powerful forces of Anguilla and conquered this impregnable island fortress.

Little Britain, playing the role of David, smote the Anguillan Goliath, to the surprise of the experts and the delight of those who are constantly rooting for the underdog.

"No one thought the British could do it," said a London correspondent at the National Press Club bar, where everyone was buying him drinks. "But I believe this proves once and for all Her Majesty's Government can no longer be considered a paper tiger."

The bar rang with cheers. "The Anguillans bit off more than they could chew," someone shouted.

What everyone wanted to know was how the lightly armed British paratroopers and Marines managed to break through the heavy Anguillan defenses, which consisted of one Napoleonic cannon, 12 shotguns, three Ford trucks and 2000 sheep.

"The Anguillans were overconfident," the British correspondent told us. "They thought our troops were afraid of their sheep. But we used their overconfidence to our advantage. We pulled our frigates up, and when the sheep saw them, they scattered. The sheepherders tried to rally the herds, but by this time the sheep were so disorganized they couldn't possibly put up any defense.

"It proves again that a small, tight-knit, well-trained force of paratroopers and Marines can overwhelm a much larger force of sheep if they are determined to do the job."

This was the first military defeat for Anguilla in its history, and there is great soul searching going on now amongst the Anguillan armed forces, which consist of three constables, six deputies and three Red Cross nurses. There will probably be a shakeup in the Anguilla military within the next month.

Anguilla watchers in Washington felt that the consequences of the British invasion would be felt throughout the world.

"Anguilla can no longer be considered a major power," a State Department man at the bar said.

"We have to readjust our thinking vis-a-vis their military potential. If a little country like Great Britain can defeat them, with all the hardware the Anguillans had at their disposal, then we'll have to figure out some other way of defending the Caribbean."

The London correspondent said, "We have always insisted that we could take Anguilla any time we wanted to, but everyone laughed at us. I don't imagine they're laughing anymore. The world must know by now that we just won't allow anyone to trifle with our Empire."

He went on to say that the doves in Britain had argued against the invasion, not because it was immoral but because they didn't think the British military could do the job. But the hawks argued that with a surprise attack they could overwhelm the Anguillans before they could get their pitchforks out of their barns. The hawks, it turned out, were right.

"Now that you've brought Anguilla to her knees," an American correspondent said, "what do you plan to do next?"

"We are a peace loving people," the London correspondent replied. "We intervened in Anguilla only when our interests were threatened. But I think this will serve as a warning that aggression will not go unpunished in any part of the globe."

A member of the English Speaking Union raised his glass. "Today Anguilla—tomorrow the world."

WORLD PEACE: WHO THREATENS IN AFRICA?

(Mr. RARICK asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. RARICK. Mr. Speaker, in Africa who threatens world peace? An established civilized Christian government or a band of Communist guerrillas who seek to impose a puppet Red dictatorship by terrorism?

The situation in South Africa has been trumped up to indicate some pretended threat to world peace—should the civilized leadership not surrender the safety of their people for the benefits of a proven culture to the raw savagery of the Red dictatorship. The facts of life are that the civilized nations in Africa have proven they can protect their people very well and are the most advanced progressive governments on the continent.

The record is clear that any threat to peace in Africa comes from the Communist terrorists—armed, trained, and commanded in the Communist world and supported, strangely enough, by some misguided Americans, including even religious groups.

Mr. Speaker, I think our colleagues will be interested in reviewing the activities in South Africa with reports from both sides of the question, and I

place an interview with Dr. Eduardo Mondlane from the War and Peace publication, a chapter from "Blueprint for Conflict," by the American-Africa Affairs Association, and several reports on Africa from American Opinion magazine follow:

[From War and Peace Report, January 1966]

ANOTHER "VIETNAM" IN AFRICA?

(NOTE.—The American press has almost totally overlooked the "war of national liberation" in Mozambique—despite the fact that the Frelimo rebels claim control of a fifth of the territory of this big Portuguese African colony. Here is presented an interview with Dr. Eduardo Mondlane, leader of the revolution, followed by comments from the Portuguese government.)

A guerrilla operation, smaller and younger than that of the Viet Cong but operating on the same general principles, has established a firm base in the Portuguese East African colony of Mozambique. It is being led by a Mozambican professor on leave from New York's Syracuse University. Dr. Eduardo Mondlane, who is president of the Mozambique Liberation Front.

The U.S. press appears almost totally unaware of the extent of the rebel activities in Mozambique. It may be that editors are more attuned to the denials of rebel activity coming from Lisbon than from firsthand reports out of Africa.

The most complete recent report on the war came in a series of articles published in late September and early October in Rhodesian newspapers by Lord Kilbracken, of the conservative Evening Standard (London). After traveling with Portuguese patrols, he wrote:

"By military airplane, army lorry and gunboat I have traversed in 10 hard days the whole active battle zone along Lake Malawi, where Portuguese troops are locked in combat with Frelimo (nationalist) guerrillas. . . .

"The scale of fighting in this bitter, unsung war has steadily increased since the first minor incidents just a year ago—especially in recent weeks when there has been a strong Frelimo build-up. Today the battle zone stretches some 20 to 40 miles inland along almost all Mozambique's lake shore from the Tanzanian to the Malawi border. In 3,000 terrorized square miles the Portuguese, both civil and military, are now confined to five small isolated garrisons.

"The Frelimo, a Viet Cong in miniature, are a tough and elusive enemy. They generally operate in very small units, often only half a dozen men. I could obtain no estimate of their total strength in Mozambique. They are at home in the jungle and bush, where they live off the country, striking silently by night, withdrawing swiftly into the dense cover if the Portuguese reply in strength. . . .

"I saw much captured equipment—mortars, grenades, machine-guns, high explosives and mines—certainly identified as Chinese- and Russian-made. . . ."

The Frelimo (the name is an acronym from Frente de Liberçao de Mozambique) are undertaking their insurrection in a territory somewhat larger than Texas lying east of Rhodesia on the Indian Ocean. On the other side of Africa, in another Portuguese colony, Angola, a separate revolution is older and has been much more widely reported on. However, the Angolan revolt seems to be making less headway now than it was a year or so ago, partly because of the factionalism of its leadership and partly because of the political instability in the Congo, which has been providing sanctuary to the rebels. Frelimo so far has avoided both these problems: Its leadership is more united and Tanzania has offered a stable sanctuary.

Frelimo's leader, Dr. Mondlane, who was born in 1920 in southern Mozambique, took his Ph. D. in sociology at Northwestern University and taught at Syracuse before returning to his country. His headquarters is in Dar es Salaam, Tanzania. His white wife, Janet, who is from Minnesota, now runs the Mozambique Institute in Dar es Salaan, which educates exiles and refugees from Mozambique.

About a year ago, Dr. Mondlane spent a month in the U.S. seeking backing and publicity for his cause, but he encountered principally apathy. A few weeks later, he made a trip to Peking to seek aid from the Chinese—and it was only then that the American press took note of him.

Last month Dr. Mondlane finished another stay in the U.S. His main business was at the United Nations, where he testified before the Fourth Committee (Trusteeship) of the General Assembly. He again sought American backing and notice in the press for his cause—and again he failed.

War/Peace Report arranged a discussion with Dr. Mondlane on Dec. 7, just before his return to Dar es Salaam. In addition to WPR Editor Richard Hudson, participants were Immanuel Wallerstein, associate professor of sociology at Columbia University and author of the book, *Africa: the Politics of Independence;* Marvin Harris, chairman of the department of anthropology at Columbia University, who lived in Mozambique for a year as a Ford Foundation fellow, and Collin Gonze, publications director of the American Committee on Africa.

The interview, which begins on the next page, is followed by comments on it from the Portuguese Embassy in Washington, D.C.

THE INTERVIEW WITH DR. MONDLANE

HUDSON: Dr. Mondlane, what is going on in Mozambique?

MONDALE: In Mozambique there is a military action that started in September, 1964, led by the Mozambique Liberation Front to force the Portuguese either to negotiate with us for independence, or to get out of Mozambique. We are fighting the Portuguese government, which uses both the police and an army to maintain its colonial control over our country.

HUDSON: What are conditions like in Mozambique?

MONDLANE: There are about seven million Mozambicans and a hundred thousand Europeans in the country. Economically, the Europeans dominate the commercial, administrative and other structures that exploit the majority of the people, who are predominantly farmers. In addition, several hundred thousand Mozambican migratory laborers work in Mozambique, Rhodesia and South Africa. They work mostly for foreign companies and are controlled by the Portuguese government.

Clearly, the white people enjoy a position of economic and social privilege at the expense of the African people in Mozambique.

GONZE: This new booklet, "Mozambique," published by the Portuguese government, says, "The franchise is the same as in Portugal, i. e., universal adult suffrage, based on being either literate, or a taxpayer or a householder." Is this true?

MONDLANE: The first qualification, literacy, would cut out 95 percent of the African adult population.

GONZE: How about the taxpayer qualification?

MONDLANE: The tax system in the country depends on a certain level of income, which your source conveniently did not indicate. Ninety-eight percent of the African population would be eliminated by this qualification.

GONZE: Take the third one, a householder.

MONDLANE: The Portuguese define *family* in a strictly European manner, which excludes most Africans from being classified as householders. It is the European, the mulatto and a few assimilados who would be honored with this kind of name.

We discovered, in statistics taken from the March, 1964, elections, that less than two per cent of the population of Mozambique voted, a percentage which exactly equals the percentage of adult Europeans in Mozambique.

From a practical point of view, then, this has no meaning.

HUDSON: How would you compare conditions in Mozambique with those in South Africa?

MONDLANE: The policy of the government of South Africa is quite different from that of the Portuguese in Mozambique. Although we personally disagree with the policy of South Africa, the policy of apartheid is nevertheless an open and honestly-stated policy of separation and discrimination. In Mozambique, the Portuguese government says that there is no discrimination, but practices discrimination anyway.

HUDSON: Is the objective of Frelimo to take over the government?

MONDLANE: Yes. We want the same chance that other African states have had to take over their own governments. We want a democratic government based on majority rule, not a government that controls by fear, as does the present one.

HUDSON: Does this mean independence from Portugal?

MONDLANE: Yes.

HUDSON: And what would happen, in your opinion, to the Portuguese there in the event of majority rule?

MONDLANE: The same thing that happened to the English whites who are settled in Kenya, Tanzania, of many African countries after independence came. They will have the option to be citizens if they wish to be citizens.

Whether or not a person is a natural citizen of Mozambique will depend not on his race, but on whether or not he was born in Mozambique. Portuguese whites who wish to be Mozambicans should participate in our struggle for liberation. After liberation even those who did not participate in our struggle may become citizens providing they did not commit crime against the African people.

HARRIS: To go back to the comparison between Mozambique and South Africa, I do not think that it is widely known that much of the South African labor force consists of migrants from Mozambique, and that this is also true of a considerable portion of the labor force in Rhodesia. Would you comment, Dr. Mondlane, on the reason to this situation, and its prospects for the future?

MONDLANE: There is a historical reason for this situation. There is more than a hundred thousand Mozambican laborers in South Africa. When South Africa was first established a state, even before the Union of South Africa was established, there were no laws to force black men to work for Europeans. But there were never enough Africans who wanted to work in the mines of South Africa. They tried bringing in Chinese, first, and then Indians to work, but both attempts were unsuccessful.

Finally they noticed that there were a large number of Mozambicans who seemed interested in working in South Africa. When the Portuguese also became aware of this, they saw an opportunity to make some money, so they negotiated an agreement with South Africa. South Africa was provided with cheap labor and the Portuguese government could profit from regulating and controlling the labor. For example, the Portuguese would limit the period of time a Mozambican could spend working in South Africa, but it would not limit the number of times he could go back. Since the Portuguese government got a certain amount of money every time a Mozambician laborer went into South Africa, the Portuguese profited. The Portuguese also decided that the worker's family could not travel with him to South Africa, thus always ensuring his return to Mozambique.

Part of the South African commitment in this agreement was to ship goods from the mining-industrial area of the Witwatersrand

through Mozambique. As a matter of fact, it stipulated that 50 per cent of the industrial production of that area must go through the port of Lourenco Marques.

HARRIS: How much do the Portuguese get per worker each time he enters?

MONDLANE: It now amounts to six dollars per person. Then, for the first four months, the Portuguese government gets 50 per cent of the man's wages, which is deducted from his salary. During the remainder of the two years he is allowed to spend in South Africa, 50 per cent of his wages go to the Portuguese government, which hands this back to him, without interest, in Portuguese escudos when he returns. This helps to keep the Portuguese coffers well supplied with South African sterling. The whole system is worth millions per year to the Portuguese.

HARRIS: Dr. Mondlane, how can the Portuguese pretend that they wish to avoid establishing a system of apartheid, while Mozambique labor is contributing to the maintenance of the South African economy?

MONDLANE: They only try to tell foreigners that they do not wish to establish apartheid. They know better than to try to tell us that, since they know that we know that apartheid exists.

What they have said to many of us is that the South African racial problem is really due to giving the African population too much education, thus making control over them more difficult. They do not hesitate to tell some of us that they do not intend to educate too many Mozambicans, since the African position must always be that of an inferior.

My wife, Janet, and I spoke with the governor of Mozambique in 1960. He said that it was Portuguese policy not to discriminate and that Africans were to be treated as brothers. He admitted, though, that discrimination existed and that my people were treated very badly. He considered himself to be in the wing of the Portuguese government favoring a change in the policy, but he said, "Realtistically, we can't change this; it will be here for years." Now I say that he was dreaming. The Portuguese government can't be there for years, because the Africa of today is not the Africa of his time.

WALLERSTEIN: Under what circumstances do you conceive it possible that the Portuguese will negotiate?

MONDLANE: Possibly after a change of government in Lisbon—meaning the death of Salazar. We might have a new government which would not carry out all these policies, but we do not expect it.

WALLERSTEIN: Would this new government come about without an internal revolution in Portugal? Within the framework of the present regime, might some other man be willing to negotiate?

MONDLANE: No. I think that the death of Salazar would mean an internal revolution in Portugal.

WALLERSTEIN: Could the revolution gain power?

MONDLANE: They might.

WALLERSTEIN: Under what circumstances would they negotiate?

MONDLANE: By seeing realistically that they can't win.

WALLERSTEIN: Would they then have to concede independence?

MONDLANE: Yes, they would have to or we would not talk.

WALLERSTEIN: Would there be discussion about some sort of Portuguese Commonwealth in Africa?

MONDLANE: No. There is no basis for it.

WALLERSTEIN: What argument could they use back home to justify granting independence?

MONDLANE: They would be under pressure back home to let us go, since young Portuguese men are dying in the African colonies.

WALLERSTEIN. Would this, then, be a military victory, or the result of public opinion back home, as well as world opinion?

MONDLANE: Both. Algeria is a good example. There it was a complex of internal opinion, and pressures within France, and the inability of the French army to defeat the liberation movement, which forced de Gaulle to negotiate.

WALLERSTEIN: Why isn't that combination of pressures working in Rhodesia?

MONDLANE: Because the main eye of resistance is not in Britain, but is within Rhodesia. The only point of comparison would be if you asked "Do you expect a white settler government to develop in Mozambique?"

WALLERSTEIN: Do you?

MONDLANE: No. First, the population proportion is extremely in our favor. Second, there is not a white settler government in Mozambique as there is in Rhodesia.

WALLERSTEIN: What is the impact of the present Rhodesian crisis on the Portuguese in Mozambique?

MONDLANE: I'm sure that they are pleased with the success of Ian Smith. He supports the position Portugal maintains.

WALLERSTEIN: Will the Rhodesian crisis be a setback to your struggle in Mozambique?

MONDLANE: Yes, unless the nationalists take direct action.

WALLERSTEIN: What are the prospects, as far as you can see, of the Organization of African Unity getting involved?

MONDLANE: It is possible, but I do not know whether it will. I can say, though, that the Rhodesian nationalists can get support from us if they want it.

HUDSON: How would you describe the ideology of Frelimo?

MONDLANE: Our ideology is independence. We are fighting for freedom, democracy, and majority government in Mozambique. In this ideology, we have been supported by the majority of the members of the United Nations.

To achieve independence, we first approached the Portuguese to negotiate and they refused. We then appealed to world opinion to push Portugal into negotiation, and world opinion has not been successful. This left us with the third alternative, military action, in which we are now engaged.

We need support, and we get most of it from Africa. However, since African states do not produce many weapons, we must seek this material support outside of Africa. If the West won't give it to us, the communists will.

WALLERSTEIN: Do you get any significant aid from the West in any form?

MONDLANE: None, in terms of equipment, although we do get some medical and educational aid, particularly from Scandinavian countries.

We prefer to get our aid, however, from everybody, everywhere. We have no special choice.

HUDSON: Aren't you afraid that if you get help from the communist countries, the U.S. will call your insurgency communist and, therefore, will not support you?

MONDLANE: We don't really care what the Americans think of us. No American has given us any equipment we need for our struggle. It would be ridiculous if we shivered in fear that the United States would call us communist when the only countries willing to give us military assistance are the communist countries.

HARRIS: I would like to make the point here that the mere fact that you have an insurgent movement appears these days to be sufficient for the United States to claim that it is communist-inspired and supported by Peking and Moscow, even when no arms have been supplied. If I were running a revolutionary movement and faced the prospect of being called a communist regardless of whether or not I took arms from Moscow or Peking, I would take the arms, since I would be called communist anyway. We (the U.S.) are suppressing every liberal, revolutionary movement throughout the world as a matter of policy.

MONDLANE: Beyond this, we in Mozambique feel no special obligation to be any more sensitive to the feeling of United States citizens concerning our struggle than we are toward the Chinese, the Russians, or anybody.

HUDSON: Are you asking for help in the United States, and what reaction are you getting?

MONDLANE: We are getting a negative response in the United States, even for educational help. Our educational program in Dar es Salaam was started with a grant from the Ford Foundation, but after the Portuguese yelled "foul," the Ford Foundation withdrew. It is still impossible to get help from foundations or private groups.

HARRIS: You might add that the Portuguese threatened the Ford Company and that the Ford Company then reacted on the Ford Foundation.

MONDLANE: And the Ford Foundation promised the Portuguese that it will never consider giving any aid to educational programs in their colonies without their approval.

HUDSON: Do you have proof of this?

MONDLANE: Yes, it was in the *New York Times* last year. Many letters of protest were written both to the Ford Foundation and to newspapers by myself and many private citizens in the United States, including the American Committee on Africa, but the Foundation never said "boo."

I have many friends in the United States, individual friends, but they are not people who can afford to finance and equip an army like ours.

WALLERSTEIN: Do you see this war in Mozambique as a short war or a long war?

MONDLANE: It will be a long war because we must force the Portuguese into talking or getting out.

HUDSON: Are you looking for advisers?

MONDLANE: No. We train our people now, ourselves. Originally Algeria helped. The president of Algeria, Houari Boumediene, directed the training of our officers, who now train our soldiers in Mozambique. We train in Mozambique, not in Tanzania, as some think.

WALLERSTEIN: What percentage of the territory is under your control?

MONDLANE: About one-fifth.

WALLERSTEIN: What does it mean when you say it is under your control? Do you mean there are no Portuguese troops there?

MONDLANE: No, it means that the Portuguese army is confined to specific points and the roads are not usable by them. Supplies have to be brought in by air.

WALLERSTEIN: This is near the northern border?

MONDLANE: About 500 miles deep, and we are pushing steadily south. There is political action throughout the country, but the military action has to be more confined at first because of the difficulty of transporting the equipment. Militarily, we must proceed point by point until the war is won.

WALLERSTEIN: Would you care to comment on the support you get from neighboring African countries.

MONDLANE: No, I cannot.

HUDSON: Is your war following the guerrilla war patterns advocated by such guerrilla experts as Che Guevara, Mao Tse-tung and General Vo Nyugen Giap?

MONDLANE: Yes, to the extent that they attempted to develop universal principles of action and, in a sense, made guerrilla war scientific. However, every such war has to be adapted to its particular environment, and so we are adding our own techniques to these principles based on our own experience in Mozambique.

GONZE: Do you have a military commander for Frelimo?

MONDLANE: No, we have a secretary of defense. You see, we work as a team. We have a secretary of defense just as we have a secretary for education and a secretary for social welfare. Each of these secretaries re-

ports to me, and I, in turn, report to the central committee.

HUDSON: What should be American policy toward Frelimo? I would like to hear what you Americans think on this.

GONZE: I don't think there has been a specific American policy toward Mozambique. What seems to be at stake is U.S. policy toward Portugal.

It is a curious phenomenon that one can talk to desk officers at the State Department and find enlightenment, understanding, and abundant information, and then go to another bureau and find the most abysmal ignorance and medieval kind of thinking. For example, one finds that U.S. policy is dominated by concern about Portugal's strategic role on the Iberian Peninsula. But it gets even more petty than that.

About five years ago, American policy was generally sympathetic toward the movement for liberation in southern Africa. But about two years ago the American lease for an air base in the Azores expired and a new one was to be negotiated. It became evident that in exchange for the continued use of the base, the U.S. agreed not to push its policy for liberation in Angola. As a result, the State Department has put on continual pressure to prevent as many student exiles from Portuguese territories coming to the United States, and has tried to prevent them from making too much of a show or making too many speeches, so as not to anger the Portuguese.

So, I do not think that the U.S. has any real policy toward these countries.

HARRIS: I believe that American policy is a national disgrace which exists by virtue of the colossal ignorance of the American people concerning affairs in Portugal and southern Africa. The U.S. is supporting in Portugal a dictatorial regime which maintains the Portuguese in perhaps the most backward condition of any people in Europe, and yet the U.S. continues to support Portugal in its attempt to provide so-called civilization to the African territory.

HUDSON: It's really not an either-or proposition, is it? The United States is not giving weapons to the Mozambique Liberation front, nor is it giving weapons to Portugal through NATO.

MONDLANE: Well, that is precisely it. It *is* an either-or proposition, and the U.S. is supporting Portugal.

HARRIS: Dr. Mondlane's men are now fighting Portuguese who have been equipped either directly or indirectly through American NATO support, and the American people don't know this.

MONDLANE: And there are leaders and military commanders who are trained in NATO counter-insurgency techniques in the United States.

HUDSON: But they are not actually getting much equipment, are they?

MONDLANE: They used American planes in Angola and Guinea, but this caused quite a stir and NATO insisted that Portugal withdraw these planes. Other equipment from the U.S. is used, I'm sure.

GONZE: We have in our office fragments of napalm shells and casings of napalm bombs which were made in the U.S. and used in Angola by the Portuguese.

WALLERSTEIN: Regardless of whether or not the arms we give Portugal reach the colonies directly, the arms we give will make it possible to release other arms, made by somebody else, which can reach the Portuguese colonies. So this detective game, though it may be fun, is not to the point. If we give arms to Portugal we are, by definition, aiding its fight in Mozambique.

MONDLANE: The position of the U.S. in the Security Council a few weeks ago was anything but encouraging. A resolution sponsored by the African states was watered down as much as possible by the U.S. and when the vote came, the U.S. abstained. Later, I was told by reliable sources that Ambassador Goldberg had been told either to water it down or veto it. So even African leaders friendly to the United States have no choice but to conclude that the United States is pro-Portuguese.

U.S. diplomats help to convince the Mozambicans that Americans are pro-Portuguese. For instance, the U.S. ambassador to Portugal, Admiral Anderson, makes public statements every chance he gets supporting Portuguese power in Africa.

HUDSON: Do you have any idea how long the war will take—one year, five years, ten years?

MONDLANE: We cannot predict. It depends on so many complex factors. We might venture a guess, were we fighting Portugal alone, but with the support she is getting from the U.S. and other countries, it is impossible to predict. We wouldn't be surprised eventually to see European and American "advisers" coming to work with the Portuguese. I wouldn't even rule out another Vietnam situation in Mozambique. But our people are ready for any eventuality. Since we have waited 450 years, another 10 or 20 years does not seem too long to get what is our right.

HARRIS: Although I'm not a political scientist by profession, I nevertheless feel entitled, as an American citizen who has lived in Mozambique and knows Dr. Mondlane and what he stands for, to point out that the American State Department has missed a great opportunity to provide the basis for a genuinely multiracial and democratic form of government in southern Africa. There is every moral reason and every practical possibility for the United States to lend its assistance, not to Portugal and to the dictatorship which controls the Portuguese people, but to this movement in southern Africa which promises to put an end to the vicious apartheid system and the tyranny which we theoretically condemn. Instead of lending our support to this movement to build up the forces of democracy, we are doing our best to repress it.

As is well known, Dr. Mondlane, who holds a Ph. D. degree from Northwestern University, who is on leave from an American university (Syracuse) and who is married to an American woman, was, in the beginning, extremely friendly toward the stated goals of American democracy. I do not know to what extent there is any remnant left in his heart of the friendship which he once felt for the American people. He would be a remarkable person if he maintained the admiration that he once had concerning the potentiality of the American system.

HUDSON: Is that right?

MONDLANE: His point was well made. In view of the attitude of the American government toward my people who are now dying, if I were to continue to admire the United States for its democratic ideals the way I used to, I would have to be mentally deranged. We judge a government by its actions. The actions of the U.S. government concerning the Portuguese question are, at best, dubious.

HUDSON: Given our traditions you expected more . . .

MONDLANE: More understanding, more support and more outright opposition to Portuguese colonialism.

I do not know what the U.S. wants to save in Portugal. I go to Europe quite often and the question I hear is, "Why don't the Americans save *themselves?*" Europeans don't need your protection in this sense. Why should you allow Portugal, a fascist government, to sit on us in Mozambique when the Portuguese don't have any special affection for your system of government? Portugal is a fascist state that is against the ideals in which Americans say they believe.

A PORTUGUESE COMMENT ON DR. MONDLANE'S INTERVIEW

(*The Portuguese Embassy to the United States, in response to an invitation by* War/Peace Report, *made the following comments on the interview with Dr. Mondlane:*)

The population of Mozambique is near 6,500,000, not 7,000,000, and the number of inhabitants of European descent is well over 150,000, not 100,000. It is untrue to allege that literacy is a necessary qualification for voting. The legal requirements are: a) if, being of age, the person can read and write Portuguese, *or,* b) *if unable to read and write,* he contributes to the state a sum of no less than 100 escudos ($3.50), yearly, in payment of property tax, industrial tax, professional tax or tax on use of capital.

Although Mozambique still suffers from a high percentage of illiteracy, as do all other African territories south of the Sahara, the percentage is much lower than the 95 per cent Dr. Mondlane indicated. As of December, 1964, 988,949 children and many adults were attending the state, private and missionary primary schools of Mozambique, 446,299 in mission schools)—which means 16 per cent of the whole population (excluding the ones attending the schools on the secondary, technical and university levels). This percentage is *higher* than in most African states.

Dr. Mondlane states that "the Portuguese government says there is no discrimination but practices discrimination, anyway." This is utterly false and all the visitors to Mozambique (thousands of them every year) know this. An example: Nampula, a district capital, and Mozambique's most modern city, has a black mayor, although the majority of the urban population is white. A British Labor M.P., Mr. Ron Ledger, after a visit to Mozambique, wrote in the London *Evening Standard* (Sept. 21, 1964): "There was no race discrimination. I was surprised and pleased with what I saw and I am glad I captured it on film—anyone who is interested can see it."

About the migratory labor from Mozambique to the South African mines, which is strictly voluntary, Dr. Mondlane again makes untrue statements, to wit: a) it is untrue that the Portuguese government receives "six dollars per head" for every migrant worker. The worker merely pays a small tax for assistance, unemployment compensation and social services which are rendered to him by Portuguese supported agencies in his zone of work, b) it is untrue that the Portuguese government collects for itself the first four months' pay of the laborer, or any fraction thereof. It is true that 50 per cent of the worker's wages are withheld and paid in escudos; this insures, first, the support of the worker's family, secondly, savings for the worker when he returns home. The correctness and desirability of this practice have never been questioned, least of all by the workers' families. Even so, some of the workers return to Mozambique loaded with useless and expensive articles sold to them by merchants and unscrupulous pushers always to be found around mining camps. The Report of the International Labor Organization (a specialized agency of the United Nations), after an exclusive survey *in loco* has this to say:

Par. 745—"The Commission finds that the recruitment of labor in Mozambique for South Africa is based on the economic attraction of employment in South Africa and the element of social status which having been so employed confers, and that there is no element of compulsion under Portuguese jurisdiction and no element of fraud in such recruitment; it also finds the operations of the Witwatersrand Native Labor Association which it inspected to be both efficient and humane."

The I.L.O. report is available at the U.N. The new agreement of 1964 between the Portuguese and South African governments im-

proved still more the working conditions and assistance to the Mozambique migrant workers.

Dr. Mondlane claims that for many years he has been carrying on his fight against "Portuguese colonialism." It is curious to note that on his last visit to Lourenço Marques, in 1961, just before he decided to lead an anti-Portuguese group, he spoke over Mozambique Radio, *voluntarily*, of course, and warmly praised the Portuguese administration, the progress, and multiracial society of his native land.

Speaking of material support, Dr. Mondlane says, "If the West won't give it to us, the communists will." Clarification, please: the communists *have* supported Frelimo from the very beginning. Money, instructors on terrorist warfare, and weapons to Frelimo have always come and are still coming from such states. Since November, 1964, the Portuguese security forces in northern Mozambique have captured enough war matérial, prisoners and other evidence to prove this. In a statement to the journalist, Malcolm Payne, published in the *Daily Colonist*, of Victoria, B.C., Canada (Oct. 22, 1965), Dr. Mondlane revealed that the Frelimo weapons came mostly from "China, Russia, Czechoslovakia and Indonesia."

He also claims that his terroist training camps are inside Mozambique. This again is untrue. Such camps are in Tanzania: the main base at Bagamoye, two more at Moshi and Kizizu; another camp at Mgawina; and still two more at Tanga and Kongwa. He also claims that "one-fifth" of Mozambique is under Frelimo control. This is a ridiculous claim and Dr. Mondlane knows it. Please name a single town of any importance, port, airfield, means of communication, or area, under Frelimo control. If his terrorist organization controls one-fifth of Mozambique (*which would mean 60,540 square miles*, nearly the area of the large state of Washington), why is Dr. Mondlane residing at Dar es Salaam? He claims further that his "forces" have penetrated "five hundred miles" inside Mozambique territory. This again is plainly preposterous. But, as the hit-and-run actions by Frelimo terrorists have occurred and still are occurring in points bordering Tanzania, it is conceivable that Dr. Mondlane is counting the five hundred miles from his palatial home at Dares Salaam (Tanzania) to the Mozambique border, across Tanzanian territory.

Unfortunately, the limitations of space for our comments will not permit us to take, point by point, the extensive pronouncements of the interview. Inasmuch as Dr. Mondlane was touring this country on a propaganda trip, trying to raise funds and rally support for his terrorist organization. Frelimo, one cannot be too surprised at his distortion of the facts, with the heavy anti-Portuguese slant, and his exaggerations. In the last few years either at the U.N. forum or on propaganda junkets throughout the world extremist leaders of all sorts have indulged in that kind of talk against anything or anyone who stands for law and order.

What is much more shocking than Dr. Mondlane's pronouncements is the utterances of some of the "interviewers," particularly Prof. Marva Harris, for many years a fancy champion of any anti-Portuguese cause that might have come along, regardless of whether or not he knew what he was talking about. In regard to the present situation in the Portuguese Overseas Provinces, he does *not* know what he is talking about; as for the communist-oriented nature of subversive movements, such as Frelimo, he undoubtedly does know. His statement beginning—"I would like to make the point here . . ." and ending, "We (the U.S.) are suppressing every liberal revolutionary movement throughout the world as a matter of policy."—clearly defines where he stands.

EXCERPT FROM "BLUEPRINT FOR CONFLICT" ON THE MOZAMBIQUE FRONT

One cannot infer from this diversification, however, that the Communists are experimenting to determine the best way to conquer the fastest. From personal observation I am inclined to believe it much more likely that they were forced to adapt to situations created when hot-headed terrorists launched the fighting prematurely.

Consider, for instance, the evolution of battle in those 4,000-odd square miles of northeastern Mozambique now claimed as "secured" by the *Frente Liberadazao Mocambique* (Frelimo) forces from the Tanzanian frontier to the Lurio River in the south, Their use of the word "secure" is more than a little dubious. Rebel troops, captained by Algerian, Cuban and occasional American Black Nationalist officers, and encadred by a few elite regular troops from Ethiopia, Kenya, and Tanzania, conquered and held, no matter how briefly, some of the more strategic heights, by Portugal's own admission. Certainly there are still rebels in the area—in strong positions, too. But the nonchalance of Portuguese paratroopers and their black Mozambique Rifles circulating in the area—even with me, a foreign visitor, to protect—totally belies the insurgents' claim to hold a solid front.

Not that the Portuguese soldiers and their tribal allies are careless. Quite the contrary. They know that their real strength lies in the elasticity of their superb defenses, now virtually a reflex, which to date has resulted in the capture of several thousands of prisoners, including the man generally credited with firing the first shot that triggered the Frelimo fighting—prematurely. He is Lucas Fernandez, currently one of more than 2,000 terrorist prisoners in a detention camp in southern Mozambique.

Fernandez, a leader and self-appointed secretary of the Mozambecano African National Union (MANU), was credited early in the resistance planning with the recruitment of more than 1,000 volunteers. At the time—1963—this was considered to be an excellent showing, even if the recruits had virtually no weapons. The showing, in fact, was enough for Fernandez to believe he was entitled to membership in the Frelimo's Party Council or steering committee, then headed by Adelino Gwambe and Uria Simango and located in Tanzania. The rivalry between these two men, however, was so bitter that their Red Chinese sponsors relieved both and called in a compromise candidate for the presidency of the movement. He was Eduardo Mondlane, a native of Mozambique, who was taken directly from his post as Professor of African Studies at Syracuse University. (Mondlane was killed by a time bomb in Dar es Salaam on February 3, 1969.)

Not only did this move leave Fernandez out in the cold, but it angered him sufficiently to goad him into planning and executing a coup of his own, one he hoped and believed would compel the Chinese Communists to recognize his worth to the movement. Picking up a truckload of weapons, which he told his Chinese sponsors were to be used in a weapons familiarization course, and ammunition from Soviet recruiters who were interested in gaining influence in the activist MANU, he went to Mueda where he organized a team of terrorists. With them he worked his way across-country, the Portuguese say, warning the Meconda and Angonia tribesmen to keep their ears open because "the black man will rise."

The authorities reacted quickly, but not fast enough to prevent Fernandez from reaching Vila Cabral near the Malawi border. There, on September 25, 1964, he picked for his target one of the most popular men in the district, Father Daniel, a Jesuit priest and medical missionary, whose real last name is lost in the dusty archives of the Catholic Church. All that is known about him, just a little more than four years later, is that he was Dutch and "rather old." Characteristically, the methodical Fernandez organized a mammoth demonstration, knowing full well that as soon as the priest heard of it, he would also appear—if only to debate.

Fernandez reportedly toyed with the debate until the priest turned to the assembled tribesmen and told them all to go home. Witnesses say Fernandez' four shots hit the priest in the neck, the back, the chest and the abdomen. He then leaped from the podium he had set up for himself and stabbed the dying priest a total of 33 times.

The audience was thunderstruck—too frightened to flee, too confused to react, and too shocked to do anything but stand and stare. Fernandez had made his mark. Stooping to pick up the frail priest's body, he held it out: "See," he shouted to the crowd, "I have killed a white man! I am not afraid! I shall lead you on to other victories like this until all of Mozambique belongs to the black man!" He and his fellow terrorists, a mere handful of men, walked away in the stunned silence that followed. Portuguese secret police soon traced them to Dar-es-Salaam—inviolate sanctuary, from which they could be neither extradited nor abducted.

This first shot triggered an increasingly vicious war. The Portuguese reacted swiftly, deploying defensive troops. So too did the Red Chinese and their Soviet collaborators. Apparently, however, the Communists determined to dump Fernandez, and they duped him into leading another expedition into Mozambique. Insiders today say he believed he was opening an African counterpart of the Ho Chi Minh Trail. Fernandez' "Ho Trail" was to lead from the Tanzanian frontier southward some 750 miles to the Republic of South Africa—right across the heart of Mozambique. Inevitably Fernandez was captured, some say on information received. The date was April 12, 1965.

One learns with no little surprise that even in a war as vicious as this one, the Portuguese, who abolished the death penalty in 1810, have not reinvoked it for guerrillas. Even though the matter has received considerable thought, executions are still banned. Fernandez therefore wound up in a detention camp near Lourenço Marques, the capital. I interviewed him there in a room of his choosing. He demonstrated all the symptoms of acute schizophrenia, talking on the one hand quite freely of his day-long prayers for the priest, and on the other of a mysterious companion who "really committed the murder," and whose identity he can readily assume. Breaking off, he will invite the visitor to inspect a crucifix he carved out of waste lumber and erected in the prison yard as a monument to his victim.

He is a ready talker and speaks more than passable English. But ask him any details of the crime: "I didn't kill the priest," he will shout, "Carlos did!" Carlos, a prison doctor explains, is his *alter ego*. Pressing him only precipitates anger, and since he is a very strong, wiry man, despite his imprisonment, one doesn't press too far. But a proposed compromise worked out well. I asked him what Carlos did, and down to the last detail I got the full story, embellished perhaps a little by pride when the listener expressed any horror.

Only once during the interview did Fernandez drop the mask of Carlos to assume a first person role in the murder, and that was when he said, "I stopped soon after the death to wash the blood from my clothes . . . it was drawing flies." Aside from that one slip, Fernandez firmly indicated that he now believes himself to have been merely one of the 236 eyewitnesses whose identical

stories of the murder were written in the record. The man will remain in prison until the day his body dies. His mind is already gone.

The consequences of that cold-blooded murder, too, will linger. Despite the premature triggering of the fighting, the Frelimo forces did at one time push as far south as the Lurio, but their claim to holding some 4,000 square miles today does not hold up. My own more conservative estimate, based on a personal survey and the freedom of movement enjoyed during the look-see, might concede some 1,800 miles under spotty control of the guerrillas. That is somewhat more than the 1,100 square miles admitted by the Portuguese as of mid-September, 1968. And the rebels appear to be using only some 8,000 to 10,000 spottily trained forces.

One thing does appear certain: from the frequency of their attacks, in bands of 15 or 20 sallying out of their strongholds, the Frelimo is still far from defeated. "But we feel that time is on our side," explained one official, a knowledgeable subinspector of Portugal's security forces—the *Policia Internacionale de Defese do Estado* (PIDE) at Lourenço Marques. "The Frelimo's slow progress and heavy casualties seem to be cooling the enthusiasm of their backers on the other side of the Tanzanian frontier [i.e., the Chinese Communists], and the loyal blacks on our side of the frontier are getting better organized."

This subinspector conceded that the Mozambecano tribesmen had been forced to react because "they were in trouble. If they helped the terrorists, they risked getting shot by our [black] Rifles. If they didn't, they risked getting shot by the terrorists. But now the balance appears to have swung to our side. We arm the blacks when we believe it will do some good. To date, it has."

The frequency of the rebels' probing forays across the front can be accurately charted. PIDE and other sources each admit an average of about 15 to 20 incidents a month. Keeping tabs and neutralizing these thrusts, however, hasn't yet strained what at first glimpse seems to be a rather skimpy frontier guard. That guard, though, is made up of elite troops, all men well versed in jungle warfare and guerrilla tactics, familiar to the point of contempt with their immediate action theaters.

Now while attacks can be and are fairly freely discussed with an outside observer, casualty figures for the enemy, and particularly the number of prisoners, are not. True, prisoner totals of 2,000 or so in any camp can be accurately estimated, but it is not quite so simple to determine *how many* camps there really are. One neutral intelligence source said his non-African headquarters believed that the Portuguese alone were holding more than 20,000 prisoners. And a recently captured Iron Curtain agent (European, not Asian), interviewed while under house arrest, was even gloomier in his estimates. He frankly admitted that *total losses* on all fronts since August, 1964, amounted to "at least 42,000, many of whom, of course, were deserters."

Prisoners only recently taken into custody claimed that in the 15-day period immediately preceding their capture, they knew of nine operations involving a total of perhaps slightly more than 200 insurgents. Four of these engagements were to set booby traps, simple but dreadfully effective Chinese land mines, on the main patrol routes. These highly portable TNT charges are designed to explode under four pounds of pressure. Simple they may be, but the terrorist in his nervousness is sometimes betrayed by them. One occasionally hears them exploding, both night and day. Subsequent investigation invariably shows that some of the terrorists fail to learn Rule One of the household handyman: "Don't paint yourself into a corner." Quite often they set so many mines they step on them themselves.

A favorite trick of the rebels, however, initially inflicted some damage on the defending forces. Portuguese military men engaged in neutralizing these attacks admitted losing three men in the earliest days through sheer carelessness. The terrorists had deliberately allowed themselves to be detected, and fled at the approach of the counter-insurgents. Lying in plain sight were 12 or 15 unplanted mines. The stack of black, hatbox-shaped mines was tempting and, it transpired, triggered to explode on contact. A trooper walked over and picked one up . . . Three men died, one of them a black Rifleman who had guessed the trap and sought to prevent it.

Surrounded by a pile of mines still stacked in his office, another PIDE inspector, waiting for an ordnance man to come in and disarm them, cursed the "outside interference" disrupting Mozambique.

"If they'd leave our blacks alone," he said, "we could improve their lot fifty times faster than we are doing. We've been working at that since the end of World War II, just as all other progressive, white governments in Africa have been doing. Don't for a minute believe our concern was motivated by or *because* of the guerrillas. It is in spite of them. If the outside assistance now reaching the Frelimo from Tanzania were to be cut off tomorrow, fighting would collapse in a matter of days—if not hours. Then all we'd have to contend with would be the Meconda tribesmen. They are fierce, proud and, up to the past few years, completely autonomous by their own wish. In this world, however, the state of Mozambique can only survive united.

"The outsiders don't want that. It prevents them from moving in and imposing a dictatorship of their own on our people. Don't you for a minute believe they have any intention of permitting any of this 'one-man, one-vote' opposition once they take over, either.

"Look at Cuba! Did Fidel Castro ever in the past almost ten years come closer than talking about it to giving the *guajiro* [peasant] a vote? Okay! So where's the world's opprobrium against Castro? Where are the British frigates lying off the coast? They cut *us* [the Portuguese] off from free trade with the world because of *suspected* oppression in Rhodesia? Is Cuba blockaded?

"Admit it, Mr. Brigham, the 'idealists' in your country, in Britain, in the United Nations, have deprived you of your reason. They have seized control to right an imagined wrong without so much as an *unbiased* look at the target states of their hatred. They have permitted themselves, and forced all thinking men, to abandon logic for emotion."

GUARDING CABORA BASSA

Perhaps because of the slow inroads the Portuguese, playing a waiting game, are making on the northeast frontier against the Frelimo, the Communists have recently reactivated operations on what might be called the West Mozambecano front in the province of Tete, where the Portuguese line all but completely surrounds Malawi, making it an enclave of Mozambique.

Terrorist forces in this area are largely Zambian-based, somewhat better trained and equipped, but still too newly engaged to permit of any accurate assessment. Tactically, their operations are generally the lethal hit-run variety, with no quarter given or asked. Casualties are, therefore, consistently high. These rebels are members of the Committee for Revolution in Mozambique (COREMO) and their effectives appear to specialize in sabotage of a highly skilled type.

Currently one of their principal targets appears to be the Mozambecano hydro-electric plant on the Zambesi River at Cabora Bassa. When completed that installation, larger than Egypt's Aswan Dam, will deliver some 2 million kilowatts to an 800-mile powerline net, construction of which is well under way. One can readily appreciate the virtually impossible task of protecting such a powerline; intermittent sabotage, particularly in the more deserted zones, is almost a daily occurrence. The Portuguese are meeting this problem in a most interesting way.

Drawing from the ranks of war prisoners in various detention camps, they have "rehabilitated" hundreds willing to accept the responsibility of protecting the pylons, armed them, and sent them into the region with their families. The PIDE with great satisfaction reports the system is paying off.

"You have the tale of your farmer in America," said Anthony Vaz, Sub-Director of PIDE in Mozambique (there is only one PIDE Director, and he is in Lisbon). "Well, this farmer trapped a raccoon, I believe, that was stealing grain from his barn. He was irked because the grain was for his horses. When he killed the animal, he skinned it and made a whip from its hide. When a neighbor asked him why he hadn't just thrown the pelt away, he replied: 'I'm going to get horsepower out of that grain, one way or the other.'

"We Portuguese, too, have to get 'horsepower' one way or another out of the swelling ranks of the prisoners, particularly with the threat hanging over us all the time of a mass attack by all of the black states in the north. And if we just rounded up the prisoners and let them rot mentally and physically right where they are . . . well, we can neither afford this, nor is the idea tolerable.

"Some day, the men we're now meeting on battlegrounds of their choosing will return to their homes. Peace will come—it always has in the history of war. So we got the idea it might be a good thing to start training our enemies for peace. It hasn't failed us yet."

Director Vaz, of course, has a number of things going for his idea. First, by returning the prisoner to his home or tribal area, he is sending back a man under suspicion. Had he talked? Was that why he was released? Should the local tribesmen believe this story of rehabilitation, or should they kill him? Did he return as a spy?

It speaks well for the PIDE that to date not a single attacker of one of the rehabilitees has escaped. Nor, with the exception of a single ex-prisoner who was surprised working with a sabotage team, has any of the released prisoners failed to repulse an attack on the pylons. The one exception was killed when he tried to shoot his way out of the trap.

On the other hand, by early October of 1968, eleven of the ex-prisoner guards had paid in blood for their loyalty to their new responsibilities. Four of them were killed. Two of the wounded, questioned through interpreters, grinned through their pain: "What?" one of them asked. "Do you for a minute believe an outsider could come into *my* valley undetected and attack property I am defending? I've got a family, you know. And neighbors who are watching me all the time, waiting for me to slack my responsibilities. I've been given a second chance. I'm going to fight for it!"

Fight for it, he had. He killed three of his five attackers, captured another, though grievously wounded himself, and was trying to stop the villagers from beating the fifth to death when outside help arrived.

The other, who lost a foot to an attacker's hand grenade, managed to kill all three of the saboteurs. A high-school graduate before he joined the terrorists, he'll receive a pension from the state—$25 a month, not bad by African standards. But he was much happier about the "proof of his rehabilitation" that his act had given the government. "Now they'll have to believe me when I say I'm Portuguese!"

TRIPARTITE DEFENSE

Prior to this experiment with rehabilitation troops (historically, first used by the British in Germany toward the end of World War II) the sabotage activity on the Coremo front had pinned down so many Portuguese and Mozambecano Riflemen that the Communists had enjoyed an almost completely free hand building up supply routes across the Chirundu plateau from Tanzania to Rhodesia. And under the same diversionary umbrella, the Communists had also made considerable progress in developing their African "Ho Chi Minh Trail," some 400 miles long and skirting Mozambique's western frontier with Rhodesia, to bring rebels and equipment into South Africa.

Well marked on the ground but fairly well hidden from air reconnaissance, even during the recent intensive drought, that trail was to be the main route also used by the troops of the Zimbabwe African National Union (ZANU) and Zimbabwe African Peoples Union (ZAPU) sent to strike into eastern Rhodesia. Portuguese forces, however, are now freed to mop up both trails and are doing it.

These mopping-up operations, moreover, appear to be demonstrating the effectiveness of another unobtrusive evolution in the "White South's" counter-insurgency. With the quiet development of an informal central command for all three countries, an international and (again) informal radio net has been created for instantaneous communications that earlier were often bogged down for days in "channels." The tripartite arrangement has also permitted the free interchange of manpower, information and equipment, to forestall invasions, build reinforcements and step up pressure on the rebels' lines.

As noted previously, with the exception of a single bombing run on a rebel formation fleeing into Tanzania from Mozambique, there has been to date no counter invasion of the north. Not that the police and military directly concerned haven't wanted to counterattack, since both Zambia and Tanzania serve the rebels as ready sanctuary to which they can flee, regroup and re-equip, and shift the axis for their next attack, always secure in the knowledge that no one will follow.

One diplomat, from a neutral non-African (and non-European) nation, recalled what he termed "the ultimate affront" the White South had suffered, when ideologues associated with the Carnegie Endowment for International Peace compiled a 170-page staff study, including estimates of probable casualties presumably American troops would suffer in a not-so-hypothetical plan to invade South Africa to end apartheid.

"Where are the outcries from the idealists against that plan?" he asked. "The point I wish to make," he added, "is that even at its *stylized worst*, which it definitely is nowhere near approaching, the relationship between the black man and his alleged white overlords is no excuse for the current programs of sanctions, implicit and explicit, against these powers in the south—as anybody could plainly determine if he would take the trouble of making one unbiased survey trip with no preconceived notions as to what to expect."

Rhodesia's BSAP has been reinforced with units of the Rhodesian African Rifles (white officers, black troops). Portugal's totally unsegregated Mozambecanos have been reinforced with some 45,000 elite troops from the Metropole (Lisbon), and the Republic of South Africa has loaned some 300 of its highly skilled State Police to the joint effort. Pretoria's simple explanation for its contribution: it wants to hold the terrorist operation as far from South African soil as it can. "The day we have to fight them on our soil," explained General van den Bergh, "it will be an entirely different kind of war: one where we will have to drop the defensive and strike hard on the offensive. It will be a total war."

Prime Minister Vorster recently warned: "If we ever have to strike back at President Kaunda and the Zambians, we will hit them so hard where it hurts that they will never forget it. We may be a small state, but we have a compact defensive force." His reference to "where it hurts" was presumably to an all-out counterattack *into* Zambia.

Invasion rumbles on both sides of the terrorist front continue to echo, with sometimes amazing side-effects. President Kaunda blasted British Prime Minister Harold Wilson and his "cowardly government that resorts to dirty tricks" for its refusal to release to Zambia (on credit, naturally) some $20 million worth of British-manufactured "Rapier" missiles. Wilson told a House of Commons questioner it would take two years to deliver the missiles, that British defense experts doubted Zambian soldiery "possessed the technical know-how to use them," but that the missiles could still be purchased—if Zambia wanted to pay cash. Wilson satisfied his questioner further with assurance that it "appears highly unlikely that the [white African] states will attack Zambia." At last report, Kaunda was attempting to induce the Chinese to move some of their missilery now protecting the southern approaches to Dar-es-Salaam (from Mozambique) to the area around his capital, Lusaka. Infiltrators indicate he has not yet been successful.

Paradoxically, President Kaunda recently served notice on the guerrillas now stationed on his soil to "Fight or quit!" Infiltrators slipping back across the lines after Zambian penetrations reported Kaunda, as late as mid-October, had ordered the closing of a chain of "Freedom Houses" from which the OAU's Committee of Liberation had been directing the insurgency effort. Key personnel from those local headquarters have apparently been evacuated to Dar-es-Salaam to new offices near the Sino-Soviet headquarters.

Kaunda also cracked down on press gangs operating throughout the mining areas in Zambia, looking for "recruits" for the terrorist movement. His public statement was that "while it was deplorable that many [Zambians] had been inadvertently [sic] impressed into service, many others who did not want such service were so severely beaten that many died."

Invasion rumors brought an invitation from the Zambian government for an on-site inspection by neutral newspapermen. Curiously enough, only Iron Curtain newsmen appeared to have succeeded in obtaining visas from Kaunda's Vice President, Simon Kapwepwe. Nevertheless, a ringer managed to sneak in and brought back a report:

1. There is a network of training and transit camps within walking distance of the Rhodesian frontier.

2. The camps were set up by ZANU and ZAPU organizers. Both resistance groups have now been outlawed by decree from Kaunda, though they have a stay of dissolution through late January—presumably to permit them to conform to Kaunda's order to fight or quit.

3. To date, camps have been moved constantly, apparently to spare Zambia international embarrassment.

4. Activities of troops in these camps were directed by a Sino-Soviet staff operating in Lusaka with the full knowledge of the Zambian Foreign Office.

5. By Kapwepwe's own admission, Zambia's attitude to date toward these camps had been one of blind permissiveness. He is reported to have commented on the Kaunda "fight or quit" order that the black resistance movement can't delay much longer because the White South's defensive measures are "becoming perfected."

Kapwepwe himself, however, is a bit of an opportunist. Infiltrators repeatedly tell of the Vice President's pep talks at terrorist training camps. Making no bones about it, he was quoted many times as telling the recruits, "The day is coming . . . when you shall follow *my* leadership to complete victory over the white man." A rabid pro-Peking Communist, Kapwepwe has somehow managed to keep his political skirts clean by avoiding a direct confrontation with Zambian *regular* troops. These are encadred by British-trained and hence presumably anti-Communist officers—a by-product of Zambia's recent independence.

Prisoners captured on the Rhodesian front often spoke with awe of those Zambian regulars and specifically of their ruthlessness in those rare confrontations with the rebels "in training." From the tenor and context of such interviews, however, it might justifiably be inferred that since January 1968 Kapwepwe's advisors have misled the Vice President into believing that the time is near to begin testing the regulars' loyalty to the President. If so, it may produce some interesting results. Kapwepwe at this juncture, even with all his determination to "kill off the whites," could scarcely survive without the help of the Chinese Communists. Few outside Kapwepwe's immediate circle believe the Communists would be foolish enough to commit their forces in an internecine struggle.

The same may be said of Tanzania where, whatever his other sympathies, President Nyerere sees to it that his regular army forces are hand-picked and get the cream of the Communist weapons entering his country. He carefully nurtures a two-faced intimacy with both the Soviets and the Red Chinese. Does he hope he can play them off, one against the other? Many small-nation strong-men have entertained that hope, even though history to date suggests it is illusory. In Nyerere's case the hope would seem futile, given the unity of purpose the two Communist giants have maintained in the African theater.

The Free World would do well to note that unity of purpose in Africa. And the mere fact that the Communist pressure is maintained, in spite of continuing reverses, may be read as an augury of the Sino-Soviet joint determination.

The so-called White South, most directly and immediately concerned because of proximity, of course, recognizes this continuing pressure. Nonetheless it has been able, thanks to successes to date, to relax many of the onetime oppressively restrictive measures it was forced to apply. Clifford W. Dupont, Officer Administering the Government of Rhodesia—an office roughly equivalent to that of Governor-General under the British—deplored the necessity for such laws, however temporary.

"When the controversial Section 48–A (1) (a) of the Law and Order (Maintenance) Act was legislated in 1963, black men, women and children were innocent victims of an increasing terror. The casualties mostly resulted from fire bombs callously tossed into highly flammable grass-thatched huts. The resulting conflagrations often wiped out entire black villages, not only near the present front lines but far into the interior." (Guerrillas and their leaders captured after such attacks freely admitted that their sole intent was to sow terrorism to forestall future resistance.) "The only offense of the victims was that, being black, they did *not* espouse the terrorists' cause.

"Enactment of Section 48 made it a mandatory hanging offense for a man to enter Rhodesia bearing weapons of war. Enforcement of that law so dramatically stopped those firebombings that this October the law's mandatory capital punishment provisions were repealed. A Justice will now mete out the death penalty only on the evidence. It is only fair to add, however, that not a single terrorist among the several hanged, after apprehension under Section 48, was

executed for being a terrorist. *Every one of them went to the scaffold for common law murder.*"

The same can be said of South Africa, where the death penalty has only been invoked where acts of terriorism have cost human lives.

Talking to prisoners at all stages of detention, from immediate capture to those already jailed for a long time, one encounters emotions ranging from conviction that the tide has turned to fear that it hasn't and won't until the Communists are cornered and evicted from Africa. Then white and black can get on with the job of building started immediately after World War II when the world awoke to the concept of the developing nation.

PORTUGUESE AFRICA

Portugal is taking sensible precautions to protect her multi-racial citizenry in both her east and west overseas provinces. In Mozambique, on the east coast, desperadoes began fighting in the jungles; by coincidence very close to the Tanganyikan border. But the Portuguese have put fifty thousand troops into the area to demonstrate a sense of responsibility. They would like to get their hands on Eduardo C. Mondlane, who reportedly has left his hideout at the State Department in Washington to lead the jungle games in person. He studied his trade at a number of prominent American vocational institutes, ranging from Oberlin to Harvard, and took his apprenticeship in Ralph Bunche's office at the UN Trusteeship Council. Mondlane, who recently taught at Syracuse University, is a Peace Corps instructor when not leading Communist terrorists.

FROM AFRICA

(By George S. Schuyler)

Students of World War III with their attention riveted on Vietnam and the *Pueblo* incident might well be equally concerned with the African sector of the conflict where significant gains have been made by the Communist enemy.

There is first the continuing and devastating civil war in Nigeria where the successes of the Federals over the Biafran rebels have been largely made possible by massive aid from Moscow in the form of arms and aircraft. Of course, since the Lagos government has no pilots capable of flying the Soviet planes, the Kremlin has graciously sent an ample supply of those too. With the death toll already at thirty thousand, or more than the total U.S. deaths in Vietnam, it continues to mount daily as Soviet bombers destroy cities, churches, and hospitals, in the absence of any worthwhile military targets. The British military aid to Lagos has also been substantial, but nothing approaching the Russian help which came from the beginning after urgent appeals.

Thanks to this foreign military aid, the Federal forces have demolished Biafra's great trading city of Onitsha—where a $1.4 million market is now a scorched skeleton of twisted girders, the $17 million bridge across the mighty Niger has been destroyed, and the population of 160,000 has been reduced to less than 1,000, without water, electricity or food, except that supplied by the victorious Federal forces of General Yakubu Gowon.

Both the Roman Catholic Church and the World Council of Churches have appealed for peace in Nigeria in a joint statement saying they "unite in one voice in most urgent appeal to both contesting parties for an immediate cessation of armed hostilities in this sad conflict and for the establishment of a lasting peace by honorable negotiations in the highest African tradition." Neither of these august bodies, of course, has ever appealed to the Algerian dictatorship for the release of the kidnaped and imprisoned Moise Tshombe; nor to anyone in behalf of the half million Christians and pagans chased out of southern Sudan by the Khartoum politicians beefed up by Soviet arms (nothing can be done about the half million already slaughtered there in the civil war which has been going on since 1956); nor have they appealed on behalf of the thousands of hapless Jehovah's Witnesses who have been raped, robbed, tortured, and killed by the brave forces of Dr. Hastings Banda, dictator of Malawi.

Only the much-maligned Portuguese and the French have helped supply arms to the Biafrans, though the Dutch (with their usual eye to commerce) have run several freighters through the blockade. The United States has aided neither side but has recognized all sorts of virtue in the case of Lagos. In return it has been daily denounced by the Moscow-leaning Nigerians.

President Tubman, of one-Party Liberia, and Emperor Haile Selassie, the daddy of all African dictators—who co-chaired the Nigerian peace mission of the Organization of African Unity—have been distressingly ineffective as the genocide against the talented and progressive Ibo people of Biafra has progressed. But, as a sort of farcical note, it was announced in mid-March that a month hence the big brass of the Negro Leadership Conference on Africa would emplane for Lagos to offer their good offices in bringing about Nigerian peace (something they can't maintain in their "ghettos" at home!). The delegates were to be Roy Wilkins of the N.A.A.C.P.; Whitney Young of the Urban League; A. Philip Randolph, President of the Sleeping Car Porters; and, Dr. Martin Luther King, the nonviolent agitator. With King now gathered to his fathers, the trip may be postponed with no loss to anybody except the airplane companies.

Meanwhile, the Soviet Union is zealously prosecuting its plans for conquering Africa, thereby enriching its sources of mineral wealth and denying same to the capitalist world. The Rhodesian war is being stepped up with increasing attacks across the Zambezian border by guerrillas trained by Chinese Communist military experts and equipped with the latest arms. It is estimated that there are two thousand of these guerrillas in Tanzania and Zambia, although the veracious President Kenneth Kaunda denies they are being trained in his country. This is affirmed by James R. D. Chikerema, Lusaka-based Vice President of the Zimbabwe African Peoples Union, and the Dar es Salaam-based Oliver Tambo, who heads the African National Congress forces in Tanzania. But, only the incredibly naive believe them. Both operate up-to-date headquarters from which they direct the movement of their Communist guerrillas across the Rhodesian and Mozambique borders.

The multi-racial Rhodesian army has repulsed the several murder teams sent across the Zambezi, but its officers admit that the guerrillas are highly trained and well equipped. That figures, since their leaders were instructed in Russia and China, with the rank-and-file being drilled in Tanzania and Zambia—and the whole tribe carrying Russian- and Chinese-made rockets and rocket-launchers. Since each guerrilla gets a $70.50 handout when he starts out on a mission, it is evident that Messrs. Chikerema and Tambo are handling a lot of money from the Liberation Committee of the Organization of African Unity (which gets its from the Soviet Union).

Parked over in Kinshasa and also backed by the O.A.U. is Communist Holden Roberto, author of the March 15, 1961 atrocities in Angola, with his forces of the Revolutionary Government of Angola; across the Congo River in Brazzaville, capital of the old French Congo, is quartered the People's Movement for the Liberation of Angola, headed by the Communist Angolan intellectual, Dr. Neto. Roberto has the nod and cash from the O.A.U., but Neto's funds come directly from the Red bosses.

The other prong of the Red pincers on Southern Africa is directed by Eduardo Mondlane, President of the Mozambique liberationist group called FRELIMO, which is quartered in Dar es Salaam. A Mozambique mulatto, married to an American girl from the Midwest, and formerly Professor at Syracuse University, Dr. Mondlane was originally bankrolled by the Ford Foundation which supported his "school" on the outskirts of Dar es Salaam. His outfit is now financed by the O.A.U.'s Liberation Committee and is credited with having eight thousand guerrillas training inside Mozambique and an equal number in Tanzania. The 65,000-man Portuguese Army is holding its own and the rebels are making no advance.

The strategy is to invade Rhodesia, Angola, Botswana, and Mozambique, and to encircle South Africa, the real goal. With South Africa's wealth in capital and natural resources, and South West Africa's diamond bonanza, the Communists figure they would have it made. The only obstacle to world conquest would then be the United States.

[From American Opinion, April 1969]

PORTUGAL: ENJOYING THE LAST LAUGH IN AFRICA

(By George Schuyler)

Fifty years before their erstwhile protege, Chirstopher Columbus, "discovered" America, the Portuguese established their presence in West Africa; and, at the turn of the Sixteenth Century, they were a terror to the Asiatic bosses along the East African littoral who had for half a millenium been exploiting and selling the natives.

Today, after weathering five centuries of competition, envy, warfare, and derision of Africa's poverty, ignorance, weakness, and ineptitude, the much-maligned Portuguese are rapidly approaching Easy Street there. In the early centuries (like everybody else) they eked out a living and maintained their African presence by selling the most readily available product: slaves. Now they are the first coffee exporter in Africa (the third largest in the world), and a major marketer of diamonds. They have some of the largest hydroelectric schemes in Africa, tremendous mineral resources, gushing oil wells, and an African territory a third the size of the United States.

The Third World since its emergence has evil-wished the Portuguese empire, denigrated it, maligned it, conspired against it in the United Nations, invaded it with guerrilla mercenaries bankrolled indirectly by the Russian and Chinese Communists, and mobilized the vast propaganda machine of the "Liberal" West against it. The Portuguese have endured the psychological and military attacks, tolerated the defection and treason of their N.A.T.O. partners, rolled with the juridical punches of the black conspirators in the U.N., and are today living higher on the hog than all of their Third World detractors.

The politico-military lineup against Portuguese Africa has been formidable. Communist Holden Roberto's People's Movement for the Liberation of Angola launched the initial attack from the new Congo Republic eight years ago, hitting northern Angola on March fifteenth. The initial slaughter was terrific, an orgy of butchery and mutilation unprecedented this side of the Iron Curtain, and using the innovation of sawmills in disposing of victims. The latter were not only white but colored farmers. A month later when your correspondent was in Luanda and toured the affected area, I saw hundreds of the impoverished refugees. They were of all colors, rich and poor.

As soon as Guinea's Sekou Toure celebrated his independence by giving Khrushchev his first foothold in Africa, and the brilliant Communists supplied quantities of tanks, anti-aircraft guns, and snow shovels, the African Independence Party of Portuguese Guinea and Cape Verde was born. Portuguese Guinea, sandwiched between Senegal and Guinea, seemed particularly vulnerable. The initial surprise attack swept a large area of country, and the Communists were jubilant, predicting early ousting and/or slaughter of the Portuguese. It didn't happen.

Three years later the Mozambique Liberation Front was formed by the ex-Syracuse University professor, Eduardo Mondlane—well-oiled with contributions from the elite of the American Left. Eduardo set up headquarters in Dar-es-Salaam at a "school"—for "Mozambique refugees" financed by the Ford Foundation—where the curriculum consisted of courses in revolution and guerrilla warfare. The warriors are generally under the Afro-Asian People's Solidarity Organization (A.A.P.S.O.) headquartered in Cairo and dominated by the minions of Mao. Arms for the guerrillas are delivered through Zanzibar, and training and leadership are supplied by Chinese officers. No doubt their help will be needed as Mondlane opened a package containing a bomb early this year and disappeared. I do not know who was the world benefactor, but Eduardo Mondlane has been gathered to his fathers—via a vacuum cleaner.

The Red terrorists maintain two staging areas in Zambia, where Kenneth Kaunda, the "pacifist," is President. Several heavy infiltrations have been made through the Zambezi valley of Rhodesia and the Caprivi Strip of South-West Africa. These have been regularly attended by disaster. It will be noted that occupancy of the Caprivi Strip would threaten southern Angola as well as Botswana. and hence Rhodesia.

But the Portuguese were not born yesterday, and they have known Africa and the Africans intimately, for five hundred years. Where younger and more cruel imperialists imposed white racism on the conquered blacks and insulted them with discriminatory practices which particularly offended people of position and education, the Portuguese pronounced and practiced interracialism from the Fifteenth Century. So after Roberto's and Mondlane's failure to penetrate Angola and Mozambique, the Portuguese redoubled their social work in border areas, put up model villages to replace those bombed during the warfare, bought off venal rebel leaders, and soon had things back to normal. All can vote, schools have been greatly increased, and universities have been established.

So, while racism soars everywhere else in the continent, it declines toward nadir in Portuguese Africa. This reporter has traveled five thousand miles in the two big departments, and if there had been any manifestations of racism, he would have detected it.

Today, those who evil-wished Portugal are grinding their molars to the quick over her new African prosperity. Offshore discoveries, spouting wells, and a busy refinery in Angola's Cabinda area are now producing 20,000 to 25,000 barrels daily. This sulphur-free oil will be increasingly in great demand as delivery of oil from the Middle East grows more uncertain because of politics. Production will be 150,000 barrels daily by 1970. As Robert F. Ward of Cabinda Gulf says: "This represents one of the major growth areas in the corporation." No wonder Texaco is trying to get in on the action.

Diamonds totaling 1,268,140.45 carats showed an annual increase of 9.7 percent. Geologists report that the Cassinga district in southern Angola is so rich in top grade iron ore (with reserves of 123 million tons) that it bids fair to becoming one of the world's major producing areas. The Benguela fishing industry is one of the world's biggest.

At Cabora-Bassa on the Zambezi in Mozambique a huge dam is being built which will establish a hydrographic basin covering an area of 1,200,000 kilometers—a bigger project than Aswan. The Cunena River project along Angola's South-West African border is almost equally promising with possibilities of settling 500,000 inhabitants, thanks to irrigation and giant power. Labor is sharing in this new prosperity, with improved housing and plentiful food. *Volkswagens* (dubbed "Hitler's Revenge" in Portuguese Africa) scamper all over the place, and all major U.S. automobile companies have agencies.

With prosperity busting out all over, and the highest African wage rates outside South Africa and the copper districts, long-aligned Portugal is having the last laugh.

GREEK INDEPENDENCE DAY

(Mr. EDWARDS of California asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. EDWARDS of California. Mr. Speaker, in the second decade of the 19th century, Western Europe began to take notice of the agonies of the Greek people who were striving to throw off the yoke of four centuries of Turkish oppression.

The possibility of the resurrection of a people fraught with such historical meaning thrilled like the sound of a trumpet through the heart of Europe. And a young English poet was moved to write:

The mountains look on Marathon,
And Marathon looks on the sea;
And musing there an hour alone,
I dreamed that Greece might still be free.
LORD BYRON.

The Greeks are an ancient people, makers of myths and philosophies, tenacious in their individualism, devoted in their love of freedom.

Today is Greek Independence Day. It celebrates the 148th year since the Greek War of Independence broke out on March 25, 1821. On that date, Bishop Germanos hoisted the flag of rebellion in the village of Kalavryta. And this is the official beginning of the revolt, although numerous other revolts had erupted in Greek settlements throughout the Balkans.

The 19th-century British historian, Archibald Alison, wrote movingly of the condition of the Greeks at the time the rebellion began:

Although the Greeks had for four centuries groaned under the dominion of the Ottomans, and the heel of conquest had perhaps crushed them with more severity than any other nation in Europe, yet they had preserved the elements of nationality, and kept alive the seeds of resurrection more entirely than any other people.

Amidst all the severities of Turkish rule they had retained the great distinctive features of nationality, their country, their language, their religion. As long as a nation preserves these, no matter how long the chains of servitude may have hung about it, the means of ultimate salvation are not lost, the elements of future independence exist.

The very severity of the Ottoman rule, the arrogance of their Turkish masters, the difference of language, religion, manners, laws, between the victors and the vanquished, had tended to perpetuate the feelings of the subjugated people, and prevent that amalgamation with their oppressors which, though it often softens the severity of conquest, does so only by preventing its chains from being ever thrown off. They had lost all—all but the sense of oppression and the desire of vengeance.

This passage has relevance for us today. It should be read and re-read by those who wish to understand the psychology of rebellion in Czechoslovakia currently, in Hungary in 1956, and in subject states everywhere.

The Greeks of 1821 numbered but two million in their mountain strongholds of southern Greece. They dared to face an Ottoman Empire of 30 million people. The five million Greeks scattered in the Balkans and along the Black Sea were of some help but more often they were victimized by their vulnerability and slaughtered by the thousands.

At last, the Greeks prevailed, despite quarrels among themselves. With help from the great powers, England, France, and Russia, peace was achieved in 1828. And there was a Greece again.

Alison wrote:

The newly-instructed Greeks found to their astonishment that they were the descendants of a people, inhabited a country, and spoke a language celebrated beyond any other in the literature of western Europe, and from the genius of which nearly the whole illumination of the world had sprung.

The image of the ancient freedom, the triumphs of ancient art, the glories of ancient warfare, which had come down to them in their own country only through the dark and uncertain streams of tradition, now stood clearly revealed in the works of their own ancestors, written in their own tongue, and preserved with pious care by the Christians of the West.

Thus modern Greece was born in the revolution of 1821. Its result was a fraction of what are today's boundaries. At the beginning in 1828, there was only Peloponnesos, a small corridor of the mainland around Athens, and a few of the Aegean islands.

For more than a century, Greece pursued her dream and her destiny, redeeming her lost children. In 1864, she acquired the Seven Islands of the Ieanian Sea; in 1881, Thessaly; in 1912, Crete; in 1913, portions of Macedonia and Epius, the islands of Samos, Chios, Lesbos, and others in the north Aegean. At last, in 1948, she redeemed the final islands of the Aegean, the group lying between Crete and Turkey, known as the Dodecanese.

Only Cyprus remains, and this helps explain the emotions behind the cry for Enosis which agitated Greece and Cyprus in the 1950's. One other dream, the retaking of the ancient center of the Greek empire of Byzantium, Constantinople, was shattered in the Greek-Turkish War of 1921–22.

Greece, now a nation of 8 million people, was a faithful ally in World War II. Indeed, its undermanned forces gave the Allies their first victory in 1940 by throwing back the Italian invasion.

Following the German defeat, a wounded Greece endured a bitter civil war which ended with the defeat of a new totalitarianism.

The United States, with its Truman doctrine aid, played a vital role in the success of pro-West democratic Greece.

We have been intimately involved in Greece ever since. American action or inaction has a critical impact on Greek political affairs.

In this context, it must be with some sadness that we observe Greek independence day today, for Greek freedom has been smothered by a military dictatorship.

We should ask ourselves what we would like to see in Greece. This is particularly pertinent now that a new administration is in office in Washington and, presumably, a review of past policies is being made.

I believe a fair answer, acceptable to American liberals and conservatives, and to Greek liberals and conservatives, is that we would like to see a Greece that is free, pro-West, prosperous, with an independent parliament, basic constitutional freedoms, a viable political system with two non-Communist political parties—one liberal and one conservative and an annual economic growth rate of 6 to 8 percent. Does this seem too much to ask? Well, it's almost exactly what existed in 1965 prior to the blundering dismissal of Prime Minister George Papandreou by King Constantine.

This blunder precipitated a long political crisis which culminated in a coup by a group of obscure colonels in April 1967. Unfortunately, the American Embassy was a party to the political blunders which created the atmosphere of the coup, though not a party to the coup itself.

I think the United States should now express with greater emphasis its support for a "national government," made up of leaders of liberal and conservative political parties. This could, if established, serve as a transitional government until genuine elections were held.

The Papadopoulos junta government is a dead-end government, unable to solve Greece's problems, uninspiring to a sullen Greek people, and uncommitted to genuine elections which would topple it from power. Accordingly, a U.S. policy which supports the junta is a dead-end policy. We ignore at our peril the long-term dangers of such support and its crippling effect on those very elements in Greece who engineered Greece's post-war economic and political recovery.

I believe we must not discount the importance of America's moral leadership and moral responsibility. We must believe in our own democratic principles and their almost universal appeal abroad. If we assert these principles, then with Byron we, too, can say:

The mountains look on Marathon,
And Marathon looks on the sea;
And musing there an hour alone,
I dreamed that Greece might still be free.

RELEASE OF FLOOD CONTROL FUNDS

(Mr. EDWARDS of California asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. EDWARDS of California. Mr. Speaker, the recent storms and flooding in California have made clear the necessity of flood control and drainage projects. Further, huge sections of the United States face one of the most serious flood threats in history this spring.

My county, Santa Clara, escaped by but a narrow margin disastrous flooding earlier this year. Even so, the southern end of the county had many acres of rich farmland flooded by waters from the Upper and Lower Llagas Creeks.

Flood control projects have been pending on these creeks for many years. But funding for these projects under Public Law 566 has been held up since 1966. The two projects in my county are but among 96 nationwide delayed by a dispute between the President and the Congress. For 12 years prior to 1966, the funding was approved by the Congress, but President Johnson in that year decided the authority to fund small watershed projects belonged to the President, not the Congress.

I am strongly urging President Nixon to end this dispute and promptly release the funds for these needed projects.

A COUNCIL OF SOCIAL ADVISERS

(Mr. PEPPER asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PEPPER. Mr. Speaker, it was my privilege on Saturday last to address the graduating class of the School of Social Work of Florida State University in Tallahassee. This occasion called to my mind a proposal which I have been considering for some time and which I am introducing in the House of Representatives today.

The proposal is that we create a Council of Social Advisers which would advise the President on broad matters of social policy, as the Council of Economic Advisers now advises on economic policy, and prepare for the President, the Congress and the country an annual social report to complement the economic report which has been prepared now for more than 20 years.

The preparation of an annual economic report is one of the results of the Full Employment Act of 1946, which I was privileged to help enact when I was a Member of the Senate. This report is prepared by the Council and, when it is submitted by the President to the Congress, is give very close study by the Joint Congressional Committee on the Economic Report. Both the Joint Committee and the Council were created by the Employment Act to give the President and the Congress greater capacity in dealing with the economic problems faced by any modern industrial economy.

Today, many of the economic problems which prompted the adoption of the Full Employment Act following World War II and the bitter depression years of the 1930's loom less ominously than they did in former years. The terrifying possibility of a plunge into another great depression no longer haunts us. We have enjoyed an 8-year period without ever an economic recession. There is, of course, the problem of now reducing the inflationary forces in our economy without producing a significant increase in unemployment. But, as a result, in a large measure of the Full Employment Act of 1946 and the creation of the Council of Economic Advisers and the Joint Committee on the Economic Report, we are confident that we can make the public and private economic decisions necessary to prevent a return to the periodic economic crises which were for so long characteristic of our economic life. The instrumentalities created by the Employment Act have developed national measures of economic activity, such as the gross national product, national income, and other economic accounts, as a basis for enlightened decisionmaking by Government and industry.

I believe we can begin to do the same thing in the field of social policy. We can develop more objective criteria for measuring the extent of our social problems and for gaging our progress in dealing with these problems.

Our most urgent domestic problems today are social crises rather than economic upheavals. We are witnessing an appalling rise in crime and a corresponding decline in the sense of security of our people. We are being shocked by student revolts into a reconsideration of our comfortable past assumptions that the quality of life automatically improves with an increase in the quantity of economic means available to our citizens—that rises in our gross national product can be correlated directly with increases in human happiness. We are being forced to face the ugly facts of discrimination; the development of poverty cycle and perhaps a permanent poverty class amid great abundance, the breakdown of family life and marriages, widespread mental illness, alcoholism and drug abuse, the deterioration of our inner cities, the continuing slaughter on our highways, the denial of dignity and meaningful life to so many of our senior citizens, and many other broad indications of deep and insistent social problems affecting the lives and happiness of millions of Americans.

In the face of these problems we should bring our social scientists into the forefront of our national decisionmaking, into the highest councils of our Government, and into the active public consciousness of our democratic society—just as we have made economic expertise an essential factor in the decisionmaking of a modern society.

We should seek to place alongside our annual economic report a comprehensive social report on how we are doing in our efforts to build a society which offers expanding opportunities for meaningful living for our people. We should enable the President, the Congress and the people to judge in the most concrete terms possible how we are doing as a human and humane society.

To this end I am today introducing in the House a proposal which has been introduced in the other body by Senator MONDALE and others to provide a "Full Opportunity Act" to complement the Full Employment Act of two decades ago. This bill provides for the creation in the Executive Office of the President a Coun-

cil of Social Advisers who would assist the President in the preparation of an annual social report. It would also create a Joint Committee on the Social Report to review this annual report in the Congress and make recommendations to the several committees of the Congress dealing with legislation relating to the social report.

The text of the bill is as follows:

S. 5

A bill to promote the public welfare

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Full Opportunity Act."

DECLARATION OF POLICY

SEC. 2. In order to promote the general welfare, the Congress declares that it is the continuing policy and responsibility of the Federal Government, consistent with the primary responsibilities of State and local governments and the private sector, to promote and encourage such conditions as will give every American the opportunity to live in decency and dignity, and to provide a clear and precise picture of whether such conditions are promoted and encouraged in such areas as health, education, and training, rehabilitation, housing, vocational opportunities, the arts and humanities, and special assistance for the mentally ill and retarded, the deprived, the abandoned, and the criminal, and by measuring progress in meeting such needs.

SOCIAL REPORT OF THE PRESIDENT

SEC. 3. (a) The President shall transmit to the Congress not later than March 20 of each year a report to be known as the social report, setting forth (1) the overall progress and effectiveness of Federal efforts designed to carry out the policy declared in section 2 with particular emphasis upon the manner in which such efforts serve to meet national social needs in such areas as health, education and training, rehabilitation, housing, vocational opportunities, the arts and humanities, and special assistance for the mentally ill and retarded, the deprived, the abandoned, and the criminal; (2) a review of State, local, and private efforts designed to create the conditions specified in section 2; (3) current and foreseeable needs in the areas served by such efforts and the progress of development of plans to meet such needs; and (4) programs and policies for carrying out the policy declared in section 2, together with such recommendations for legislation as he may deem necessary or desirable.

(b) The President may transmit from time to time to the Congress reports and supplementary to the social report, each of which shall include such supplementary or revised recommendations as he may deem necessary or desirable to achieve the policy declared in section 2.

(c) The social report, and all supplementary reports transmitted under subsection (b) of this section, shall, when transmitted to Congress, be referred to the joint committee created by section 5.

COUNCIL OF SOCIAL ADVISERS TO THE PRESIDENT

SEC. 4. (a) There is created in the Executive Office of the President a Council of Social Advisers (hereinafter called the Council). The Council shall be composed of three members who shall be appointed by the President, by and with the advice and consent of the Senate, and each of whom shall be a person who, as a result of his training, experience, and attainments, is exceptionally qualified to appraise programs and activities of the Government in the light of the policy declared in section 2, and to formulate and recommend programs to carry out such policy. Each member of the Council, other than the Chairman, shall receive compensation at the rate prescribed for level IV of the Executive Schedule by section 5315 of title 5 of the United States Code. The President shall designate one of the members of the Council as Chairman who shall receive compensation at the rate prescribed for level II of such Scehdule.

(b) The Chairman of the Council is authorized to employ, and fix the compensation of, such specialists and other experts as may be necessary for the carrying out of its functions under this Act, without regard to the provisions of title 5, United States Code, governing appointments in the competitive service, and without regard to the provisions of chapter 51 and subchapter III of chapter 53 of such title relating to classification and General Schedule pay rates, and is authorized, subject to such provisions, to employ such other officers and employees as may be necessary for carrying out its functions under this Act, and fix their compensation in accordance with the provisions of such chapter 51 and subchapter III of chapter 53.

(c) It shall be the duty and function of the Council—

(1) to assist and advise the President in the preparation of the social report;

(2) to gather timely and authoritative information and statistical data concerning developments and programs designed to carry out the policy declared in section 2, both current and prospective, and to develop a series of social indicators to analyze and interpret such information and data in the light of the policy declared in section 2 and to compile and submit to the President studies relating to such developments and programs;

(3) to appraise the various programs and activities of the Federal Government in the light of the policy declared in section 2 of this Act for the purpose of determining the extent to which such programs and activities contribute to the achievement of such policy, and to make recommendations to the President with respect thereto;

(4) to develop priorities for programs designed to carry out the policy declared in section 2 and recommend to the President the most efficient way to allocate Federal resources and the level of government—Federal, State, or local—best suited to carry out such programs;

(5) to make and furnish such studies, reports thereon, and recommendations with respect to programs, activities, and legislation to carry out the policy declared in section 2 as the President may request.

(6) to make and furnish such studies, reports thereon, and recommendations with respect to programs, activities and legislation as the President may request in appraising long-range aspects of social policy and programing consistent with the policy declared in section 2.

(d) Recognizing the predominance of State and local governments in the social area, the President shall, when appropriate, provide for the dissemination to such States and localities information or data developed by the Council pursuant to subsection (c) of this section.

(e) The Council shall make an annual report to the President in February of each year.

(f) In exercising its powers, functions, and duties under this Act—

(1) the Council may constitute such advisory committees and may consult with such representatives of industry, agriculture, labor, consumers, State and local governments, and other groups, organizations, and individuals as it deems advisable to insure the direct participation in the Council's planning of such interested parties;

(2) the Council shall, to the fullest extent possible, use the services, facilities, and information (including statistical information) of other Government agencies as well as of private research agencies, in order that duplication of effort and expense may be avoided;

(3) the Council shall, to the fullest extent possible, insure that the individual's right to privacy is not infringed by its activities; and

(4) the Council may enter into essential contractual relationships with educational institutions, private research organizations and others as needed to fulfill its duties and functions enumerated in section 4(c).

(g) To enable the Council to exercise its powers, functions, and duties under this Act, there are authorized to be appropriated (except for the salaries of the members and officers and employees of the Council) such sums as may be necessary. For the salaries of the members and salaries of officers and employees of the Council, there is authorized to be appropriated not exceeding $900,000 in the aggregate for each fiscal year.

JOINT COMMITTEE ON THE SOCIAL REPORT

SEC. 5. (a) There is established a Joint Committee on the Social Report, to be composed of eight Members of the Senate, to be appointed by the President of the Senate, and eight Members of the House of Representatives, to be appointed by the Speaker of the House of Representatives. In each case, the majority party shall be represented by five members and the minority party shall be represented by three members.

(b) It shall be the function of the joint committee—

(1) to make a continuing study of all matters relating to the social report; and

(2) as a guide to the several committees of the Congress dealing with legislation relating to the social report, not later than June 1 of each year to file a report with the Senate and the House of Representatives containing its findings and recommendations with respect to each of the main recommendations made by the President in the social report, and from time to time make such other reports and recommendations to the Senate and House of Representatives as it deems advisable.

(c) Vacancies in the membership of the joint committee shall not affect the power of remaining members to execute the functions of the joint committee, and shall be filled in the same manner as in the case of the original selection. The joint committee shall select a chairman and a vice chairman from among its members.

(d) The joint committee, or any duly authorized subcommittee thereof, is authorized to hold such hearings as it deems advisable, and, within the limitations of its appropriations, the joint committee is empowered to appoint and fix the compensation of such experts, consultants, technicians, and clerical and stenographic assistants to procure such printing and binding, and to make such expenditures, as it deems necessary and advisable. The cost of stenographic services to report hearings of the joint committee, or any subcommittee thereof, shall not exceed 25 cents per hundred words. The joint committee is authorized to utilize the services, information, and facilities of the departments and agencies of the Government and private research agencies.

(e) There is hereby authorized to be appropriated for each fiscal year the sum of $425,000, or so much thereof as may be necessary, to carry out the provisions of this section to be disbursed by the Secretary of the Senate on vouchers signed by the chairman or vice chairman.

A DEPARTMENT OF OCEANOGRAPHIC SERVICES

(Mr. PEPPER asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PEPPER. Mr. Speaker, we have come a long, long way in a very short

time since this country embarked on a crash program of space exploration.

The fruits of this effort will be reached with a manned landing on the moon before the end of the year and the long-range benefits are as unbounded as man's imagination.

The space exploration program, on the whole, is a laudable and worthy enterprise. But I rise today to voice attention to another vast, equally mysterious, largely unexplored and potentially rich environ.

I refer, of course, to the depth, the breadth, and the width of the seas.

In the forward of "Our Nation and the Sea," from the recently released report of the Commission on Marine Science, Engineering and Resources, is the opening statement:

> From the days of discovery and colonization, America has looked to the sea. In times of stress the sea has been our ally, and in times of peace, a source of our prosperity. Sometimes hostile and sometimes generous in its moods, the ocean always has offered its abundant resources in countless ways. But only recently have we begun to perceive its true potential.

The report points out that it is now nearly 10 years since the National Academy of Sciences and the U.S. Navy focused attention upon the vital import of our underdeveloped marine resources.

Packed within the 300-pages of this expertly detailed report are facts and forecasts of efforts to explore and control the sea for the service of man. I highly commend this publication to my colleagues.

It is, then, my distinct pleasure today to have the opportunity to introduce a bill to create a Department of Oceanographic Services within the cabinet of the President.

To those who might question the advisability of yet another "bureaucratic department," I would reply that this bill is designed to accomplish just the opposite.

Under the present Federal setup relating to maritime and marine interests, there is a total of 11 separate agencies engaged in the marine sciences.

Not one of these agencies functions in any substantial part for the total interest of a national marine science policy.

This legislation envisions the coordination and consolidation of the major civilian marine functions of the Federal Government to accomplish, among its goals: the expansion of exploration of marine environs and the use of marine resources; development of port, harbor and estuarine areas; enunciation of a national policy pertinent to the maritime and marine interest of the United States, and the revitalization of the American-flag merchant marine.

Under this plan, the Secretary of the Department of Oceanographic Services would work with a general counsel and four Assistant Secretaries, one each designated as the Assistant Secretary for Merchant Marine, Assistant Secretary for Exploration and Resource Development, Assistant Secretary for Marine Fisheries, and Assistant Secretary for Port and Harbor Development.

Transferred to the new Department would be the U.S. Maritime Administration, the Federal Maritime Commission, U.S. Coast Guard, U.S. Coast and Geodetic Survey, National Oceanographic Data Center of the Office of the U.S. Navy Oceanographer, the Sea-Air Interaction Laboratory, the sea-grant college program of the National Science Foundation.

Also, the Coastal Engineering Research Center of the U.S. Corps of Engineers, Bureau of Commercial Fisheries, Bureau of Sport Fisheries and Wildlife, and whatever other agencies as the President deems advisable.

There would additionally be created an Office of Marine Geology and Mineral Resources to develop mineral, fossile-fuel exploration and related affairs pertinent to the exploitation of the wealth and reserves of the Continental Shelf, Great Lakes, and world oceans for the enhancement of the national and international economy.

Studies have shown that resources from the oceans will help to diminish the world's protein deficiency. The United States is now recognizing the value of fish protein concentrate—FPC—as the means to end world hunger, and has undertaken steps for large-scale processing FPC for export.

The Government estimates that within two decades 30 to 40 percent of the domestic and world production of petroleum and mineral gas will come from offshore sources.

And we are only beginning to realize the amazing potential of the seas to produce what in time may prove to be the major source of the world's food supply.

In the matter of ocean-borne trade, it has been distressing for me to see the foreign ocean-borne commercial tonnage carried by U.S.-flag ships drop from almost 60 percent in 1947 to less than 6 percent today. Government projections see a further decline to less than 3 percent by 1980.

The policy to move our international commerce aboard cheaper foreign carriers not only reduces the freight revenues accruing to the U.S. merchant marine and aggravates the balance-of-payments deficit, but also erodes our status as a world maritime power.

We must focus prompt attention to the plight of our country's maritime fleet.

We must have an awakened attitude to the potentials that can be obtained from the exploration and cultivation of the seas. Our past and present greatness grew in large measure from dependency on the seas. Our future greatness could very well depend on it.

About three-fourths of our population is concentrated in 30 States which border the oceans, the Gulf of Mexico, and the Great Lakes. Nearly one-half of our industrial might is concentrated in coastal counties.

We are only recently becoming aware of the active and effective work that the Soviet Union is pursuing in our last frontier on earth—the oceans.

For these and other reasons, I offer for consideration a cabinet Department of Oceanographic Services.

Mr. Speaker, I request that at this point the full text of the legislation proposed be printed in the RECORD:

H.R. 9482

A bill to coordinate and consolidate the major civilian marine functions of the Federal Government through the establishment of a Department of Oceanographic Services to enunciate national policies pertinent to the maritime and marine interests of the United States, to further the expanded exploration of marine environs and the use of marine resources, to revitalize the American-flag merchant marine, to develop port, harbor and estuarine areas, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SHORT TITLE

SECTION 1. This Act may be cited as the "Oceanographic Services Act of 1969."

DECLARATION OF PURPOSES AND POLICIES

SEC. 2. The Congress finds and declares:

(1) That the lessons of our history in unlocking the frontiers and resources of the North American Continent for the benefit of mankind offers an historic parallel with the situation confronting the Nation today in the virtually unexplored and underdeveloped resources of the marine environments of the oceans, the Great Lakes, and the Continental Shelf. That the historic role of Federal Government in these United States with regard to little-known environs and the discovery of potential resources of benefit to its people is primarily one of exploration and survey, of leading the way through geographic exploration for scientific investigation, research, and conceptual development by the academic community, private industry and government alike, and by private industrial and capital investment and development to follow. That the expansion and enhancement of governmental exploration efforts for the greater ascertainment and delineation of marine environment and resources is clearly in the national interest.

(2) That the United States acquired under international law on June 10, 1964, sovereign rights to the exploration and development of resources of the Continental Shelf under the Convention of the Continental Shelf adopted at the United Nations Conference on the Law of the Sea. Pursuant to the internationally recognized and exclusive rights so secured, the United States assumes the responsibility of executing an accelerated program of exploration and development of the physical, chemical, geological, and biological resources of the Continental Shelf.

(3) That the expansion of human knowledge of phenomena in and related to the oceans, the marine environment, the Great Lakes, their boundaries and contents, and to the interaction of sea, earth, and atmosphere is of paramount importance to the peoples of the world and particularly of importance to the general welfare and security of the United States and therefore worthy of vigorous pursuit.

(4) That the United States must encourage private investment in the economic utilization of the marine resources on the Continental Shelf and in the Great Lakes and oceanic environs and determine the benefits from the use of these marine resources for increased investment and economic growth.

(5) That the development and improvement of the capabilities, performance, and efficiency of vehicles, equipment, and instruments for use in exploration, research, surveys, the recovery of resources, and the transmission of energy in the marine environments is an integral and prerequisite part of the national effort and is worthy of maximum encouragement.

(6) That the effective utilization of the scientific and engineering resources of the United States, requires close cooperation and coordination among all interested Federal

and State agencies and the private industrial sectors of the United States, in order to avoid unnecessary duplication of effort, facilities and equipment, or waste, and further that such cooperation and coordination is only possible when the various agencies and private industries concerned with marine endeavor foster the collection, storing, and distribution of significant data and knowledge acquired as a result of scientific and engineering marine and atmospheric research developments, surveys, and technological advances when such are in the national interest.

(7) That the establishment of long-range studies of the potential benefits to the United States economy, security, health, and welfare to be gained from the opportunities for, and the problems involved in the utilization of scientific marine, Great Lakes and oceanic research, investigations, and surveys is paramount to the continued enhancement of the national interest.

(8) That it is of paramount importance for the United States to cooperate with other nations and groups of nations, including organizations of the United Nations, in oceanographic, marine, and related development, research and surveys when such cooperation is in the national interest.

(9) That the preservation and enhancement of the role of the United States as a leader in oceanographic and marine science, technology, and development is clearly a national goal and that to this end the advance of education and training in marine science and technology is of basic importance.

(10) That the execution of the purposes and policies heretofore enumerated and the recognition of the vital role of marine resources and oceanographic and atmospheric considerations in the affairs of our national life and the enhancement of our international stature in the conduct of such affairs requires the establishment of an executive department to achieve the best administration of the principal civilian programs of the Federal Government concerned with marine affairs.

(11) That the American-flag merchant marine is and has been since the founding of the Republic, vital to the defense of the Nation. And that its revitalization is necessary to both the economy and the national defense. That, because of major differentials, equipment and labor costs between the United States and foreign maritime nations, the Federal Government is required to play a major role in cooperation with industry to support the merchant marine. That this role should be expanded and supported in concert with the nation's economic and defense needs.

(12) That the fisheries of the high seas, the inter-continental shelf and such major inland fresh water bodies as the Great Lakes contain enough food on an annual yield basis to feed several times the present population of the world. That, because of the exploding world population and increasing world hunger both in the United States and other countries the world's fisheries resources have taken on new importance, particularly since agricultural production in the United States and abroad is approaching its outer limits. That this resource has been scarcely tapped by the United States fishing industry. That a more dynamic United States policy toward fisheries is required to stimulate the further harvesting of these invaluable replenishable resources. That, through such a policy, advantage can be taken of the technological and scientific developments that lead to a greatly expanded and more efficient harvest of these resources. That such government policy is in the best interest of the Nation through the founding of human nutritional improvement both domestically and internationally.

(13) That the port harbor and estuarine areas of the nation constitute increasingly valuable resources, particularly as the nation's population surges from inland toward these coastal areas. That a defined government policy toward port harbor and estuarine areas can help stimulate and develop conservation. That federal guidelines in the usage of the latest technological and scientific developments can lead to the orderly and most efficient development of these areas. That such policy is clearly in the national interest.

TITLE I—ESTABLISHMENT OF DEPARTMENT

SEC. 101. (a) There is hereby established at the seat of government an executive department to be known as the Department of Oceanographic Services (hereinafter referred to as the "Department"). There shall be at the head of the Department a Secretary of Oceanographic Services (hereinafter referred to as the "Secretary"), who shall be appointed by the President by and with the advice and consent of the Senate. The Department shall be administered under the supervision and direction of the Secretary. The Secretary shall receive compensation at the rate now or hereafter prescribed by law for the heads of executive departments.

(b) The Secretary shall, among his responsibilities, advise the President with respect to Federal programs and activities relating to marine environments of the oceans and the Great Lakes; provide leadership and recommend to the President policies and programs for fostering the orderly growth and development of the Nation's maritime and marine affairs, including the revitalization of the American-flag merchant marine, the development of the nation's port, harbor and estuarine facilities, exploration and delineation, traffic and trade, the natural resources of the Continental Shelf, the Great Lakes and the oceans, science and technology, and the safety and protection of the users of marine resources and environs; exercise leadership at the direction of the President in coordinating Federal activities relating to marine resources, their exploration, exploitation, and development; provide technical assistance and information including a clearinghouse service to State governments and industries concerned with the exploration, development, utilization, and management of marine resources and allied technologies; encourage comprehensive planning by the State governments and private sectors of the economy with a view to coordinating Federal, State, and private industrial development activities; and conduct continuing comprehensive studies, and make available findings, with respect to the progress and problems of marine exploration, research, development, and technology.

(c) The Secretary shall further, among his responsibilities, pursue the execution of programs which shall provide significant emphasis to the exploration and development of the marine resources of the Continental Shelf and waters above the Continental Shelf.

(d) The Secretary may, under the foreign policy guidance of the President, engage in a program of international cooperation in work done pursuant to this Act, pursuant to agreements made by the President with the advice and consent of the Senate.

UNDER SECRETARY AND OTHER OFFICERS

SEC. 102. (a) There shall be in the Department an Under Secretary, four Assistant Secretaries, one each designated as the Assistant Secretary for Merchant Marine, Assistant Secretary for Exploration and Resource Development, Assistant Secretary for Marine Fisheries, Assistant Secretary for Port and Harbor Development, and a General Counsel, who shall be appointed by the President, by and with the advice and consent of the Senate, who shall receive compensation at the rate now or hereafter provided by law for under secretaries, assistant secretaries, and general counsels, respectively, of executive departments, and who shall perform such functions, powers, and duties as the Secretary shall prescribe from time to time.

(b) There shall be in the Department an Administrative Assistant Secretary, who shall be appointed, with the approval of the President, by the Secretary under the classified civil service, who shall perform such functions, powers, and duties as the Secretary shall prescribe from time to time, and whose annual rate of compensation shall be the same as that now or hereafter provided by or pursuant to law for administrative assistant secretaries of executive departments.

COMPONENTS OF THE DEPARTMENT

SEC. 103. (a) Except as otherwise provided in subsection (d) of this section, there are hereby transferred to and vested in the Secretary all of the functions, powers, and duties of the United States Maritime Administration, the Federal Maritime Commission, United States Coast Guard, United States Coast and Geodetic Survey, the National Oceanographic Data Center of the Office of the United States Navy Oceanographer, the Sea-Air Interaction Laboratory, the Sea Grant College program of National Science Foundation, the Coastal Engineering Research Center of the United States Corps of Engineers.

(b) There are hereby transferred to and vested in the Secretary all those functions, powers, and duties of the United States Fish and Wildlife Service and its component Bureaus, the Bureau of Commercial Fisheries and the Bureau of Sport Fisheries and Wildlife which pertain to the administration, utilization, development, and management of the fisheries resources of the oceans, Continental Shelf, marine estuaries and Great Lakes including all those fisheries resources of anadromous habit of nature. Such functions, powers, and duties are to be vested in the Department within a Bureau of Marine Fisheries and administered by a Director of Marine Fisheries under the jurisdiction of the Assistant Secretary for Marine Fisheries.

(c) There is hereby established as a function of the Department an Office of Marine Geology and Mineral Resources which shall direct, and coordinate with the United States Geological Survey, Bureau of Mines, Office of Oil and Gas, Office of Mineral Exploration, Office of Minerals and Solid Fuels, and other functions of the Department of the Interior, other Federal agencies and departments, the academic community, and private industry, the conduct and development of mineral and fossil fuel exploration, technology, and related affairs pertinent to the useful exploitation of the mineral and fossil fuel resources of the Continental Shelf, Great Lakes, and world oceans for the enhancement of the national and international economy and general welfare.

(d) There are hereby authorized to be transferred to the Department and vested in the Secretary any additional functions, powers, and duties as may be now or hereafter vested in any agency or department of the Federal Government when such is deemed by the President to be in the National interest and is in furtherance of the purposes of this Act.

EFFECTS UPON THE EXECUTIVE ESTABLISHMENT

SEC. 104. (a) It is the purpose of this Act to orient and consolidate the responsibilities pertinent to the marine and related affairs of the Nation into three categories: (1) the Department of the Navy representing the marine and related military interest and security of the United States, (2) the National Science Foundation and Smithsonian Institution representing the marine, and related academic interests, and (3) the Department of Oceanographic Services representing the civilian marine interests and industry.

(b) Notwithstanding subsection (a) hereof the Congress recognizes that numerous

additional agencies and bureaus within the Federal establishment possess and should continue to possess functions, powers, and duties relating to marine and atmospheric environments which because of their nature and scope are legitimate functions of their vested agency or department.

(c) The transfer of the marine related functions, powers, and duties of the United States Fish and Wildlife Service and its component Bureaus, the Bureau of Commercial Fisheries and the Bureau of Sport Fisheries and Wildlife within the Department of the Interior to the Bureau of Marine Fisheries within the Department of Maritime and Marine Development and the retention of inland fisheries affairs within the Department of the Interior is predicated upon the consideration and intention that the fisheries affairs of the Nation are best administered pursuant to the dictates of environment. Pursuant to this intent of the Congress:

(1) The United States Fish and Wildlife Service, the Bureau of Commercial Fisheries, and the Bureau of Sport Fisheries and Wildlife are hereby abolished.

(2) The following positions in the Department of the Interior are hereby abolished:

(a) Assistant Secretary for Fish and Wildlife and Parks;

(b) Commissioner of Fish and Wildlife.

(c) Director of the Bureau of Sport Fisheries and Wildlife; and

(d) Director of the Bureau of Commercial Fisheries.
